1919
PREFACE

The present volume carries the writer's studies regarding the problem of the Far East one step further. It has been written primarily to allow the ordinary reader to see at a glance what the position really is to-day in Eastern Asia, and to explain precisely why there should be conflict between China and Japan.

The essential point—which the writer first insisted upon at great length in 'The Fight for the Republic in China'—is that Japan has a double policy, one policy for the East and another for the West; that she uses military power and secret loans to advance the first, and diplomacy and publicity the second; and that this intricate matter can be understood only by exploring the history of the remote past.

The writer's thanks are due to the publishers of the magazine Asia for permission to reprint these essays in book-form.

PEKING, April, 1919.

THE TRUTH ABOUT CHINA AND JAPAN
THE TRUTH ABOUT CHINA AND JAPAN

I

GENERAL INTRODUCTION—EARLY RELATIONS OF CHINESE AND JAPANESE

The best authorities are agreed that the ancient Chinese originally migrated from a point near the Caspian Sea across what is now arid desert to the upper reaches of the Yellow River. The date at which this exodus took place is so remote that all trace of it has been lost; and although the proofs of the Central Asian origin of the race are satisfying to scholars, they are of a nature which cannot be here adequately summarized. Excavations recently made in Honan province have, however, brought to light utensils and modellings in baked clay of the most primitive description, including Noah’s arks of almost Biblical exactitude. According to some experts, these are conclusive
TRUTH ABOUT CHINA AND JAPAN

evidence not only of a settlement which may be counted at least six thousand years old but point to a close cultural connection with very distant regions. It may be that systematic search will some day disclose new and remarkable facts concerning Chinese origins in the cradle of the human race.

In any case it is quite certain that thirty centuries before the Christian era the Chinese had already occupied most of the territory comprised in the modern provinces of Kansu, Shensi, and Honan; that their route eastwards—towards the sea—was barred by forests may be assumed. It is interesting to record that their pictorial character for ‘East’ is a sun shining through trees, whilst the word ‘obstruction’ is compounded by placing the selfsame tree in a doorway. The remote ancestors of the race certainly cleared the land as they advanced, changing from a pastoral cultivator race, tilling the soil in small patches, into a purely agricultural nation at a time when classical Greece had not yet emerged out of the dim mists. The Chinese still venerate the name of the ruler who established tillage as the basic institution, and who rightly assumed that there is no increment so rich and so beneficial to mankind as the increment of the fields.
GENERAL INTRODUCTION

Twenty-five hundred years ago, when Confucius and Laotzu flourished, China was already a very old country. Although the celebrated Stone Drums in the Confucian Temple in Peking, which are said to record the hunting adventures of an emperor of the Chou dynasty (B.C. 876), show the most ancient writing known, it is probable that the transition from tying knots on cords, as a means of conveying ideas, to cutting notches on wood and finally to writing pictorial and ideographic symbols, took place many centuries earlier. The conception of a central kingship was certainly well-fixed by the time of the first emperors of the Hsia dynasty (B.C. 2200); and Confucius, writing in the sixth century before Christ on the discontents of the age, constantly bewails the spacious days of the legendary rulers Yao and Shun, who ruled as shepherd kings anterior to the Hsia. Remembering how much older the human race is to-day admitted to be than was believed a generation ago, it is by no means improbable that the Chinese entered the Yellow River valley at least a hundred centuries ago.

This ancient people of the pre-Christian era was a small, warring community of not more than a few million souls. Distributed along the loess soil of the broad, central valleys, their ex-
pansion during a very long period was hardly noticeable, wars and expeditions tending to monopolize their attention and breaking up the country into petty states in spite of the Imperial rule. The North China of to-day was then nothing but an arid frontier-land, a glacis; and the present metropolitan province of Chihli as wild as much of Mongolia still is. That barbarian raiders from the wastes of Central Asia were a pest from the earliest times, and harried the race as soon as it had acquired ease and wealth from tillage, may be gathered from the policy of the Emperor Chin Shih Huang-ti (B.C. 249–206). It was this ruler who is still celebrated in the Annals for two dissimilar yet closely-related acts: he burned China’s classics, because they were bringing decadence to the race, and began the building of the Great Wall as a protection for his newly-formed Empire.

The oldest capitals of China, Hsianfu in Shensi and Loyang in Honan, were soon directly protected by this vast rampart which was methodically extended by succeeding dynasties, until in the time of the Mings the last gap between the Mongolian mountains and the sea was finally closed at Shanhaikwan. Yet neither the Great Wall nor the great sacrifice of learn-
GENERAL INTRODUCTION

ing was of much avail: the Chinese were to be a constant prey to more warlike peoples. The quietist characteristics of the race had indeed become unalterably fixed in the long-ago, their own wars and disputes tending to have a municipal rather than a national character.

China’s nearest neighbour in these early times was Korea; and a vast amount of Far Eastern history pivots on this fact. Whilst it is true that Chinese adventurers, sailing down from the Yangtsze estuary, began to get into touch with the Annamese and aboriginal kingdoms around Canton soon after the Christian era, the land routes southwards were still barred by mountainous country, filled with fierce peoples. The Koreans were more docile. Broken up into small communities living in caves, culture was brought to them by Chinese scholars two thousand years ago; and their genius was sufficiently literary to allow them almost immediately to evolve an alphabet of their own for their polysyllabic dialect. That they flourished and grew in numbers rapidly is proved by the fact that they had colonized all the region of Southern Manchuria called the Liaotung fifteen hundred years ago, advancing to within a few miles of Shanhaikwan. Always
famous as miners, their workings can still be seen in extra-mural Chihli; and so well-known was their quest for the precious metals that Kheraded-Bey, an Arabian traveller of the eighth century, described Silla (Korea) as being rich in gold.

It was the first of the four Manchurian-Mongolian races, who successfully conquered North China and established dynasties, who broke Korea's land-contact with the Chinese. The Kitan Tartars in the year 1012 took the Liaotung peninsula and all the territory west of the Yalu River, driving the Koreans back into their original abode. The present boundaries of Korea were therefore fixed more than nine hundred years ago. The Kitans, who soon penetrated into North China, handed on their sovereignty to another Tartar tribe, the Chin Tartars, who were just as short-lived but established themselves firmly north of the Yellow River. Then came the Mongol or Yuan dynasty; and when this dynasty was finally expelled by the Mings in the fourteenth century, the Chinese colonization of Manchuria was greatly developed, with the transference of the national capital from Nanking back to Peking (1412). Just as Chihli and the Mongolian border-lands had been settled in previ-
GENERAL INTRODUCTION

ous centuries, so now did the plains of the Tartars receive in large numbers the Sons of Han.

This Manchurian colonization was, however, limited to the Liaotung, i.e. the country east of the Liao River, and to the districts immediately adjoining it. Beyond—in the mountains and forests—lurked fierce tribes ever ready to raid their peaceful neighbours. The Chinese symbols of conquest were now as in the dim past the mattock and the plough; their permanent posture was one of defence carried on from inside walled cities. In the sixteenth century began their historic struggle with the Manchus, a race of mountaineers living at the foot of the Ever White mountain, who finally repeated the miracle of Kublai Khan and his Tartars and conquered the Empire after a conflict lasting two generations.

The first census taken by the Manchus in 1651, after the restoration of order, returned China's population at 55 million persons, which is less than the number given in the first census of the Han dynasty, A.D. 1, and about the same as when Kublai Khan established the Mongol dynasty in 1295. Thus we are faced by the amazing fact that, from the beginning of the Christian era, the toll of life taken by
INTERNECINE AND FRONTIER WARS IN CHINA WAS SO GREAT THAT IN SPITE OF ALL TERRITORIAL EXPANSION THE POPULATION FOR UPWARDS OF SIXTEEN CENTURIES REMAINED MORE OR LESS STATIONARY. THERE IS IN ALL HISTORY NO SIMILAR RECORD. NOW, HOWEVER, CAME A VAST CHANGE. THUS THREE YEARS AFTER THE DEATH OF THE CELEBRATED MANCHU EMPEROR KANG HSI, IN 1720, THE POPULATION HAD RISEN TO 125 MILLIONS. AT THE BEGINNING OF THE REIGN OF THE NO LESS ILLUSTRIOUS CH‘IEN LUNG (1743) IT WAS RETURNED AT 145 MILLIONS; TOWARDS THE END OF HIS REIGN IN 1783 IT HAD DOUBLED AND WAS GIVEN AS 283 MILLIONS. IN THE REIGN OF CHIA CH‘ING (1812) IT HAD RISEN TO 360 MILLIONS; BEFORE THE TAIPING REBELLION (1842) IT HAD GROWN TO 413 MILLIONS; AFTER THAT TERRIBLE RISING IT SUNK TO 261 MILLIONS. THUS GOOD GOVERNMENT BETWEEN THE YEARS 1651 AND 1842—A PERIOD OF 191 YEARS—INCREASED CHINA'S POPULATION FROM 55 MILLIONS TO 413 MILLIONS, AN EIGHTFOLD GROWTH. IT HAD BEEN LEFT TO A FOREIGN RACE TO ACHIEVE THIS SURPRISING RESULT.

II

WHO ARE THE JAPANESE? FOR POLITICAL REASONS THE JAPANESE TRACE THEIR EMPERORS FROM A SUN-GODDESS WHO IS SUPPOSED TO HAVE COME
GENERAL INTRODUCTION

from Korea in the seventh century B.C. There is a great deal more in myths than is generally supposed, and there is no reason to doubt that the earliest connection between the Asiatic mainland and Southern Japan was expressed in the terms of an armed invasion led by a queen. In any case it is generally accepted that the Japanese are partly descended from a double stream of immigrants who came from the mainland by way of Korea, one stream being Manchu-Korean and the other Mongol; but Baelz, one of the most distinguished investigators of Japanese origins, finds from the recording of many cephalic indices and from other biometrical data that the strongest strain in the people is undoubtedly Malay.

If you strip off the outer Chinese clothing of both men and women (the kimono is a direct importation from China made during the Tang dynasty) you make a remarkable discovery. The men wear a loin-cloth peculiar to all the water-peoples of the island-groups along the shores of Southern Asia; whilst the women have on what is nothing more or less than the Malay sarong, or skirts, and a little sleeveless jacket. Garbed like this and placed on the curved Malay fishing-boats still in use you see the original invaders as they floated up from
TRUTH ABOUT CHINA AND JAPAN

their southern islands on the Kuroshiwo, or black current which washes their shores. In their houses, raised two feet above the ground, you may trace the vestigial remains of the water-house built on piles; and although the Japanese share with the Koreans the habit of removing their shoes indoors and sitting on matted floors, their peculiar wooden clogs, with the separated big toe, are plainly the invention of a barefooted people treading the forest trails, and needing at a moment’s notice to be able to free their feet for tree-climbing.

It is necessary to dwell on these details in order to fix well the differences between the Chinese and the Japanese. The Chinese almost from the dawn of history are a race of peaceful cultivators, walling themselves in for defence; the Japanese are a water-people, who become a forest-folk and who hunt and fish and only learn agriculture reluctantly. At the beginning of the Christian era, thinly scattered in the valleys and along the coasts of their own islands, they had not yet driven out the aborigines we know as the Ainus and warfare against them was constant and intense. Being rude and unlettered, there are few traces of their early history. But from this dim forest past comes the Japanese torii, that curious structure
originally made of tree-trunks—which so many mistake for a gateway—which was erected in front of the Sun-Goddess's shrines so that fowls might perch on it and salute at dawn the first rays of the rising sun.¹

Chinese history shows that between the years 57 and 247 of our era Japan sent four embassies to the Courts of the Han and Wei dynasties; but it is not until the sixth century that the light on the relations between Japan and China begins to grow clear. With the spread of Buddhism from across the Yellow Sea came the first real knowledge of the Chinese classics,

¹This recondite subject has never been properly explored, partly because Japanese scholars are forbidden under dire penalties from exercising their critical faculties and building up a true picture of prehistoric Japan. There is, for instance, no reason to doubt that phallicism not only figured very largely in the primitive Japanese cult but was the basis of the life of the people. The peculiar place of women in the social structure and their ruthless exploitation—which is shown in the official method of registration of the children of concubines—father so-and-so, mother unknown—has had an important influence on the development of the race and on the present position of Japanese society. Even bushido, which has been made such an international asset, is entirely borrowed, being based on the Chinese work 'San Kuo Chih', or History of Three Kingdoms—the warring period of the third century, when, with the fall of the Han dynasty, China was broken up into small warrior states and the virtues of mounted knighthood became very celebrated.

Thus of things that are really Japanese there remain only the Imperial myths; the torii; tattooing; the loin-cloth; geta, or clogs with divided toes; mound-burial; plurality of wives; the thatched, raised water-house; phallicism; and the Malay-Indonesian fishing-boats.
TRUTH ABOUT CHINA AND JAPAN

the Japanese written language by means of Chinese ideographs dating only from the seventh century. Prior to that there are certain evidences that the peculiar Korean script was fitfully borrowed, although it never really took root.

It is learning, then, that forms the first bridge between China and Japan, and in this learning Buddhism plays a great and important part. Priests and scholars crossed in great numbers from China, giving religion, which had been hitherto expressed in the crude Shinto forest-rites, a new and more imposing significance. There was a constant stream of immigrants crossing by way of Korea; Chinese temples begin to be built; and the result of this cultural intercourse may be gathered from the fact that a census of the Japanese nobility, taken in 814 A.D., indicated 382 Korean and Chinese families against 796 of purely Japanese origin. The governmental institutions of China were likewise borrowed, the eight departments of state being copied from the T'ang dynasty in China, which is famous in Japanese annals for its civilizing influence. At the beginning of the eighth century the first Japanese capital was built at Nara on the accepted Chinese plan of a metropolis, with nine gates and
nine avenues, the palace being placed in the northern section and approached by a broad straight avenue dividing the city into two perfectly equal parts. During the ensuing centuries Japan was completely transformed by the adoption of Chinese civilization, foppishness in dress and a great growth of luxury distinguishing the period. That Chinese suzerainty was admitted is not disputed, China enjoying under the T'ang a greater cultural supremacy in Eastern Asia than ever before or since.¹

So it lasted for more than three hundred years. Then a great change took place in the character of Japan owing to the feudal era, which was brought about by the struggle for power between leading families and by the intensified warfare with the Ainu barbarians. A certain Yorimoto in the twelfth century first obtained the title of Sei-itai-shogun, (Barbarian-subduing Generalissimo,) and just as the office of Regent had long been hereditary in the Fujiwara family, who gave the emperors their empresses by prescriptive right, so now did the office of Shogun belong to the Minamoto family, who established a capital at Kamakura.²

¹ Regarding this question of suzerainty see the remarkable facts further on.
² This title was not a new one; it was the new circumstances
TRUTH ABOUT CHINA AND JAPAN

The result of these facts—that militarism so early acquired a special character having all the strength of an established ritual—tinges all Japanese history, and begins that long dualism in government which still lives on under the present modern Constitution. After a period of Chinese culture, the first characteristics of the race reassert themselves, and the history of the strongest clans becomes the history of Japan. The Court, sinking as Chinese Courts were wont to sink into a purely ceremonial office, is pushed more and more into the background; and rival Shoguns, taking the field against one another and acquiring ever greater strength through the growth of the hereditary warrior-class, split up the country into great fiefs.

Relations with China, which had been cordial and intimate during the formative period, now greatly diminished in cordiality. We know that during the Yuan or Mongol dynasty two expeditions, which failed disastrously, were sent to Japan in order to enforce the claims of suzerainty. This left behind a heritage of hatred which never disappeared. True, under the Ashikaga Shoguns, in the fourteenth, fif-
which made it important. It had been first conferred at the end of the eighth century when Ainu warfare was very constant.

14
teenth, and sixteenth centuries, increasing importance was attached to trade with China so as to defray the costs of the interminable civil wars. The Ming dynasty, when its capital was at Nanking, was induced, although Japanese piracy was constant, to grant commercial passports to facilitate this intercourse, Japanese sword-blades significantly forming the principal article in the Japanese export trade. It was at the end of the fourteenth century, when relations had been reopened, after a formal protest by China at the continued piracy practised, that there occurred that remarkable event, the investiture of the Shogun Yoshimitsu by a Chinese envoy with a royal diploma and a crown. No event in Japanese history has attracted more attention than this. That the Shogun, who in point of dynastic law was simply the emperor's 'protector', performed this act mainly to consolidate his own usurpation seems to-day clear; but the minute and careful regulations which the Ming emperors issued regarding the tribute vessels from Japan—to prevent armed conspiracies—prove that on the Chinese side there was no doubt about Japanese vassalage. Certain it is that, as the years passed, relations between China and Japan steadily diminished in cor-
diality, and contact became more and more distant, save in the singular and supremely important matter of Korea.

A glance at the map will show how inevitable it has been that Korea should have played so large a part in the political history of the Far East. The peninsula, which juts out in such an astonishing way, somewhat after the fashion of Italy in Europe, is separated from Japan by only 120 miles of water. If, however, the island of Tsushima, which divides the straits into two channels, is included, as well as smaller islands such as Iki, it may be said that when passing between the two countries land is hardly ever out of sight. This is an important consideration: in olden times it had political consequences of the most far-reaching nature.

The Chinese claims of suzerainty in Korea had never been disputed. In primitive days, for instance during the T‘ang dynasty, the expression of China’s suzerain rights may only have had a fugitive character: yet it was none the less undeniable. The ancient method of a small country admitting suzerainty was simply
the dispatch of periodic embassies carrying tribute or gifts, and by this ceremonious act acquiring the right of protection against alien aggression: Korea had sent such missions to her great neighbour, who had given her civilization, from the time of the Han dynasty: and during the wars between the several Korean kingdoms in the sixth century, Chinese troops had not only participated in the struggle but had driven out the Southern dynasty, which was supported by Japanese warriors, making all Korea nominally a Chinese province.

The period of Tartar domination in North China, first under the Kitan, then under the Chin Tartars, broke up the traditional relationship between China and Korea. But no sooner was the Mongol dynasty well-established than it revived the old customs, and received homage, Korea aiding and abetting the expeditions against Japan.

Under the Ming dynasty the intimate ceremonious relations between China and Korea were re-established on a firmer basis than ever before; for in 1392 a new Korean dynasty had arisen, and the first emperor tendered his homage and accepted the Chinese calendar and chronology as a sign of his submission. From then on investiture of the Korean sovereigns
was regular and formal, no succession being legitimate until it had Chinese Imperial sanction. Korea became so thoroughly saturated with Chinese culture that the Korean dress of to-day is still based on Ming models; the old Chinese topknot being left on Korean heads when the Manchus conquered Korea in 1637 (before they had entered China) as an act of grace because the Koreans had submitted so promptly.

The great and growing friction between China and Japan which was evident during the Ming period, and which was signalized by Japanese raiders in 1554 landing on the Kiangsu and Chekiang coasts south of the Yangtsze and capturing a number of towns, brought the inevitable result in Korea. Japanese raiding in the peninsula during the sixteenth century became more and more frequent, finally culminating in the great and hideous Hideyoshi expedition, which is such an outstanding feature in Far Eastern relations that it must be dealt with at some length.

The great commander Hideyoshi, taking advantage of the feudal militarism, had subdued all Japan and by 1592 had massed an immense army of 300,000 which he was determined to use abroad. His original design was undoubt-
edly not the conquest of Korea but the conquest of China. Korea was simply the stepping-stone, and had Korea consented to be put to such a use she need never have suffered as she did. The Koreans of the sixteenth century were, however, loyal to their Chinese commitments, and just as Belgium of the twentieth century refused to be made a passageway for the German armies into France, so did Korea refuse to allow Hideyoshi a free hand, and desperately resisted. Her castles and her armies were destroyed one after another, the Japanese advance finally reaching Pingyang, although never going beyond.

It was Korean sea-power which finally saved the nation. The Chinese, to ward off the Japanese piratical raids on the Yangtsze coasts, had designed a heavily-timbered ship completely shut in—a sort of floating tank—which made it impossible for the dread Japanese swordsmen of those days to board and get to grips with their enemy. The Koreans, whose junk intercourse with China, notably with Shantung and the Liaotung, was constant, had improved on this model and sheathed it with iron scales, making it look like a turtle. To Korea, curiously enough, belongs the honour of using the first ironclads in history; for with a navy composed
of such vessels the Korean forces attacked the Japanese transports in Fusan harbour, and at other points along the Korean coast, and almost completely destroyed them. China, on being appealed to, sent army after army to the rescue of her vassal, and although these troops did not greatly distinguish themselves, their dead-weight added to the Korean forces confined the Japanese advance to Pingyang—the invaders finally retiring and evacuating Korea in 1598 as a result of their sea-losses and their domestic dissensions. The country had, however, been so terribly ravaged during six long years that it never recovered. The slaughter was so immense that there is shown in Kyoto to this day a mound under which are buried the pickled noses and ears of 35,000 Chinese and Korean troops killed by the clan of Satsuma.

Now just as the Shogun Yoshimitsu for political purposes had accepted investiture at the hands of a Chinese envoy, so did Hideyoshi after his defeat accept—unknowingly so Japanese historians declare—from the Chinese envoys a document which can have but one meaning. So important is its text as an explanation of the nature of the conflict between the two nations—China claiming a cultural supremacy
which Japan constantly rejected by force of arms—that the text should be read:

The influence of the holy and divine one (Confucius) is widespread; he is honoured and loved wherever the heavens overhang and the earth upbears. The Imperial command is universal; even as far as the bounds of ocean where the sun rises, there are none who do not obey it.

In ancient times our Imperial ancestors bestowed their favours on many lands; the Tortoise knots and the Dragon writing were sent to the limits of far Fusang (Japan), the pure alabaster and the great seal character were granted to the mountains of the submissive country. Thereafter came billowy times when communication was interrupted, but an auspicious opportunity has now arrived, when it has pleased us again to address you.

You, Toyotomi Taira Hideyoshi, having established an Island Kingdom, and knowing the reverence due to the Central land, sent to the West an envoy, and with gladness and affection offered your allegiance. On the North you knocked at the barrier of ten thousand li, and earnestly requested to be admitted within our dominions. Your mind is already confirmed in reverent submissiveness. How can we grudge our favour to so great meekness?

We do therefore specially invest you with the dignity of King of Japan, and to that intent issue this our commission. Treasure it up carefully. Over the sea we send you a crown and robe, so that you may follow our ancient custom as respects dress. Faith-
TRUTH ABOUT CHINA AND JAPAN

fully defend the frontier of the Empire; let it be your study to act worthily of your position as our minister: practise moderation and self-restraint; cherish gratitude for the Imperial favour so bountifully bestowed upon you; change not your fidelity; be humbly guided by our admonitions; continue always to follow our instructions.

Respect this!

Death, however, prevented Hideyoshi from dealing with a matter of great historical interest. Other influences were at work demanding close attention.

Already, before this turning-point in Far Eastern history, the white man had suddenly appeared on the scenes and by his presence changed the whole course of events.

IV

In 1542 a Portuguese junk on a voyage from Siam to Macao was blown from her course and fetched up off the coasts of Satsuma province. The mariners were well-received. Great curiosity was excited by their arquebuses, arms of any sort always delighting the Japanese; and these arquebuses were rapidly copied and used against the Koreans and the Chinese in the Hideyoshi expedition. The Portuguese sailors carried back the tidings of their discovery with
them to their missionaries, the great Francis de Xavier landing at the chief Satsuma city, Kagoshima, in 1549.

It would take a volume in itself to describe the direct and indirect consequences of the arrival of the European trader and the European priest on Japanese soil. But the net results can be summed up in this way. At first, being desirous of trade, the Christian propagandists were accepted by some of the feudal chiefs, for trade and religion in those days marched hand in hand. A great number of converts were made on the island of Kyushu, and in spite of some friction all was seemingly well. But when the selfsame Hideyoshi in 1587, prior to his Korean expedition, had carried out the subjection of Kiushu and the Satsuma clans, he propounded the following five questions to the Jesuits:

"Why and by what authority the propagandists had constrained Japanese to become Christian converts? Why they had induced their disciples to overthrow Buddhist temples; why did they persecute the bonzes; why they ate animals useful to man? Why the Jesuit chiefs allowed merchants of their nation to buy Japanese and to make them slaves in the Indies?"
TRUTH ABOUT CHINA AND JAPAN

The reply given to this *questionnaire* was deemed unsatisfactory and Hideyoshi issued his famous edict of expulsion. For at least ten years considerations of trade prevented the edict from being carried out, but with the coming of Franciscan monks a new phase was reached.

The Franciscans were Spaniards and were rivals of the Portuguese. Established at Manila, where their compatriots carried on a regular trade with Spanish South America, they bitterly disliked the rival order of Jesuits and were determined to humiliate them. The Jesuits, having been placed under a ban, were carrying on their religious observances secretly. The Franciscans scouted their methods. In spite of a Papal bull, which put Japan beyond their scope, they persisted in going into the country, penetrating even to Kyoto, which was then the Imperial residence, and making a number of converts. A purely fortuitous act brought their doom. A Spanish galleon, on her way from Manila to South America, drifted on to the rocks and, being very richly laden, was seized as a prize. The pilot, in a last effort to save his vessel, showed the Japanese officers a map of the world and the vast extent of the Spanish dominions. Asked to explain how one
country had acquired such sway he made the historic reply: "Our kings begin by sending into the countries they wish to conquer missionaries who induce the people to embrace our religion, and when they have made considerable progress, troops are sent to combine with the new Christians, and then our kings have not much trouble in accomplishing the rest."

On learning this speech Hideyoshi was overcome with fury and ordered still more severe measures. He died before his policy was completed, but the Tokugawa Shogun who succeeded him left nothing to be desired on the score of severity. Japan was, however, still torn by civil war, and the foreign question, although urgent, was eclipsed by domestic issues. Consequently although another edict of expulsion was issued in 1614, i.e. twenty-seven years after Hideyoshi had taken action, and still another in 1616, it was not until 1638 that the final act was played. In that year the last remaining group of Japanese Christians, numbering it is said 20,000 fighting men and 17,000 women and children, retired to the promontory of Shima-bara in the Gulf of Nagasaki. There these insurgents, fighting under flags with red crosses and with battle-cries of Jesus and Maria, were attacked and almost entirely exter-
TRUTH ABOUT CHINA AND JAPAN

minated, and Christianity in Japan disappeared.

In this last act a Dutch trading-vessel had played a part, assisting the Shogun's forces in the bombardment. The Dutch had been granted a license to trade in 1605. They possessed precisely the qualifications suited to the situation then existing in Japan: they had commercial potentialities without any religious associations: and when the Spaniards and Portuguese had been entirely expelled the field was left entirely to them—the island of Deshima in Nagasaki, which was not more than three hundred yards long, being the sole window left open to the world. Every kind of indignity was, however, imposed upon the Dutch. No Dutchman could be buried on Japanese soil. Every Dutch ship had her rudder, guns, and ammunition removed, and her sails sealed, and no religious service of any sort could be held; and this condition of affairs existed for a period of 217 years, until the coming of Perry. Not only this, but no Japanese might build vessels capable of navigating the high seas. The Japanese, foiled in Korea and fearful of the empires of the West, had irrevocably sealed themselves up.

26
GENERAL INTRODUCTION

There is in all history no such singular dénouement to the double policy Hideyoshi had inaugurated. A complete consolidation of the forces of feudalism now followed the failure of foreign conquest; and it is very important to realize how much all this has affected the character of the Japanese, and how during the last three decades they have attempted to do what they failed to accomplish three centuries ago.

Thrown back on themselves, their innate characteristics became intensified—they became more and more like themselves. With minute and voluminous regulations governing every activity; with the guards of the feudal lords on every highway, making travel from one fief to another impossible save under special license; entirely cut off from the outer world, and having no connection even with Korea save what the Daimyo of Tsushima might do by almost stealth at the tiny Fusan settlement, Japan in the seventeenth and eighteenth centuries was further from China than she was from Europe and America, since the Dutch traders at Deshima were at least a connecting link with the West. There was indeed no single exchange of documents or any species of intercourse
between China and Japan from the proclamation of the Manchu dynasty in Peking in 1644 until the commercial treaty of Tientsin of 1871.

It is necessary to consider this matter from a special point of view.

Whilst the Ming emperors did not greatly welcome the first appearance of Western navigators in their seas in 1518—i.e. twenty-six years before they reached Japan—no direct action was taken by them until the savagery of the Portuguese trading-crews and their raids into the country in search of women spread alarm and led to popular reprisals. Then only was intercourse confined to Macao and Canton, and a policy of control inaugurated.

Canton was well-fitted to maintain trade relations with unknown nations. Originally founded by Chinese sea-adventurers, who had sailed down the Chinese coasts and forced their way into the small aboriginal kingdoms during the first centuries of the Christian era, it had not been formally incorporated in the Empire until the T'ang dynasty (A.D. 618–907). In the eighth and ninth centuries the spread of Islamism had brought Arab navigators to the uttermost East, and soon Chinese
vessels, although generally going not further than the Malacca Straits, journeyed as far as Africa and the Indies. Marco Polo himself at the end of the thirteenth century, when he left the land of Cathay after his remarkable sojourn at the Court of Kublai Khan, sailed from Amoy, in the southern province of Fuhkien, for the Persian Gulf in a Chinese deep-sea junk of which he says:—

And first let us speak of the ships in which merchants go to and fro amongst the Isles of India. These ships, you must know, are of fir timber. They have but one deck, though each of them contains some fifty or sixty cabins wherein the merchants abide greatly at their ease, every man having one to himself. The ship hath but one rudder, but it hath four masts; and sometimes they have two additional masts, which they ship and unship at pleasure. Each of these great ships requires at least 200 mariners, some of them 300. They are indeed of great size, for one ship shall carry 5,000 or 6,000 baskets of pepper, and they used to be formerly larger than they are now.

The Cantonese and other South Chinese were therefore very familiar with foreign things; their argosies had long dotted the seas of the Malay archipelago when the first conquistadores passed through the Malacca Straits and
reached out for the Yellow seas; and until atrocities and arquebuses became synonymous terms the fair-faced foreigners were not restricted.

Here we have in a single sentence the history of two centuries of Euro-Chinese intercourse. The traders of Canton were not like the historic burghers of Calais who were forced to surrender the keys of their city to an alien conqueror: they merely adapted themselves to the exigencies of the hour and secured a trade monopoly by inaugurating and stereotyping a mercantile system which greatly resembled the system of medieval Europe. The emporia at Canton and at the adjacent port of Macao completely supplied the wants of buyers and sellers: in China, unlike Japan, there was no fear of foreign conquest—restriction was simply a police measure.

In religion as in commerce there is much the same story. Matteo Ricci, the first Jesuit to establish himself in China, came to Canton in 1581 and reached Peking twenty years later. He was then an accomplished Chinese scholar, and was duly presented to the Ming emperor Wan Li, who greatly welcomed him. When the Manchu cavalry entered Peking in 1644 as a result of treachery at the Great Wall and the
Mings disappeared, the Jesuit Fathers were so firmly entrenched and had so many thousands of converts that they were fully accepted by the new dynasty—just as the Greek Patriarchate was accepted by the Turks after the conquest of Constantinople. It was a question of national discipline, ancestor-worship, which finally brought conflict, the rival monastic orders of the Franciscans and the Dominicans refusing to accept the complaisance of the Jesuits and calling the practice idolatry. The matter was referred to the Popes and there were conflicting rulings. In the year 1700 the great emperor Kang Hsi definitely proclaimed that “the customs of China are political”—meaning that ancestor-worship was part of the national discipline and must be maintained; and although the Popes dissented and hurled anathemas at all who tolerated the practice, it was not until 1724—that is, after a century and a half of close religious intercourse—that an edict of expulsion was issued in Peking and only partially obeyed. The early nineteenth century indeed found Catholic missionaries still working in China in secret, and they were the first Europeans to penetrate Korea. They were indeed part and parcel of the external forces which were forcing open China, and
when the first Japanese treaty of 1871 was signed with China, missionaries of all denominations had been commonplaces for two generations.

VI

Adequately to treat this critical period of history—the renewal of direct and formal intercourse between China and Japan late in the nineteenth century, as a result of the opening of the two countries by the military action of the West—requires what is entirely missing, namely, a critical and authentic monograph on the statesman Li Hung Chang, who, until the outbreak of the war over Korea in 1894, so largely controlled the foreign relations of Peking. We do not yet know the things we require to know; we are still in the dark. The handling of evidence, the assignment of proportion, the testing of policy—all these things, difficult enough in the case of Western statesmen, become doubly so when Oriental statecraft is mixed with European issues, and the whole hidden in the twilight of an old-fashioned Yamen. Brought in 1870 to the gateway of the capital (for Tientsin is the gateway to Peking) as metropolitan viceroy and High Commissioner for Trade in the Northern Seas, Li Hung Chang
had behind him all the prestige he had won by crushing, with General Gordon’s aid, the last despairing efforts of the Taiping rebels. It was his particular duty to contrive machinery to resist foreign pressure; to limit international intercourse to the coastline; and thus to prevent clashes between an ignorant proletariat and a defiant mercantilism. Already the foundations of the Chinese State had been so sapped by internal discontent and external attacks that very little more was required to bring irreparable dynastic disaster. Japan was then a very small issue: but Korea, infallibly and inevitably, provided the meeting-place for the inherent rivalry between two nations.

In 1868 Japan had informed the Seoul Government of the restoration of the Meiji emperor through the intermediary of the Daimyo of Tsushima; but her demands for an acknowledgment of vassalage had been peremptorily rejected. War might even then have come had it not been for the wisdom of the statesmen of the Restoration period. The persistent efforts of the Western maritime Powers to enter into trade relations with the Hermit Kingdom had filled the coasts of Korea with alarm almost from the beginning of the nineteenth century,
and had culminated in the United States sending in 1871 a special mission. But the American gunboats had been fired upon, and a sharp action had ensued which had resulted in Korean coast forts being captured and destroyed. This gesture was, however, fruitless, and another decade passed before Western diplomacy intervened again. China was apparently indifferent; to this day no one accurately knows whether she foresaw what must soon occur.

On Japan, however, American action in Korea had an immediate and powerful repercussion; it was borne in on her that not one day should be wasted in delay. Nearly thirty years had now passed since China had been opened by foreign treaties; nearly twenty since she herself had given effect to Perry’s demands. Yet China and Japan were officially not cognizant of each other’s existence, and were unrepresented at each other’s Court.

In the autumn of 1871 (i.e. four months after the American gunboat affair off Chemulpo) Date, the Japanese Minister of Foreign Affairs, arrived in Tientsin and signed with Li Hung Chang a treaty which materially and radically differed from all other treaties China had made. Its language and its clauses have
indeed to-day the highest importance; for they reveal the fact that the first attempt of Japan to accommodate herself to a type of relationship alien and antithetical to Eastern culture was made in a spirit of equality. The written, precise agreement, which Europe owes to Roman Law, here appears in flowing, ceremonious language; and what should have been from its very nature clearly and absolutely defined from the very beginning is only vaguely touched upon.

Listen to the language.

Article I declares:—

Henceforth the friendship between China and Japan shall be increased and shall last like heaven and earth forever. The countries subject to each state shall in like manner treat each other with respect, and shall commit no acts of hostility towards each other, to the end that everlasting peace may be maintained.

Article II declares:—

Now that friendly relations subsist between the two countries, this friendship shall without fail be of an intimate and reciprocal character. Should either state experience at the hands of another country injustice or slighting treatment, on communication being made to the other state the latter shall give assistance or shall use her good offices in mediating
between the two countries. Thus friendship shall be increased.

Article III declares:—

The system of administration and the laws of the two countries being different, each country shall be free to conduct its own administration independently. Neither country shall be permitted to interfere in the concerns of the other and press for the adoption of things prohibited by law. Assistance shall be rendered mutually for the enforcement of laws, and each country shall give orders to its merchants that they must not lead astray the people of the other country or commit any offence whatsoever.

Was there any discussion, it may be asked, about Korea or did both plenipotentiaries avoid the issue? No one knows, for the treaty-makers are dead—and their diaries have been destroyed.

But even more interesting than these general political maxims, in which the two sovereign states dimly take cognizance of each other’s existence, are the two articles which give each country extraterritorial rights at ports open to trade where consuls have been stationed, and failing that leave control in the hands of local officials who are authorized to execute justice after lex loci. China (and the fact has capital importance to-day) possessed in the period
GENERAL INTRODUCTION

1871-94 extraterritorial rights in Japan precisely as Japan possessed extraterritorial rights in China—and it was this question just as much as the question of Korea which ultimately made an attack on China necessary to Japan.

Article VIII declares:—

Each country shall, in each of the ports of the other country which are open to trade, station a Consul who will exercise control over the merchants of his nationality. All matters relating to property of all kinds, to business or professions, and to judicial suits, shall be referred for settlement to the Consul, who shall decide them according to the laws of his country. Suits arising between merchants of the two countries shall be brought in the form of petitions; the Consul shall endeavour to settle such cases, and shall do his utmost to prevent them being made the subject of litigation. When a settlement cannot be effected in this manner, the Consul shall act in accordance with justice. In cases of robbery and absconding (where the aggrieved party is an alien), it will be sufficient for the local authorities of each country to arrest the offenders and take back the stolen property; the Government concerned shall in no case be required to make compensation.

Article IX declares:—

Should in any open port of either country no Consul be appointed, the local authorities of the country in
question shall exercise control over the subjects and trade of the other country, and render good offices; should an offence be committed, they shall arrest and try the offender, and after reporting the facts of the case to the Consul at the nearest open port, give sentence according to the law.

By one of those curious ironies which are not rare in history, within three months of its signature the treaty was subjected to an acid test by an incident in the Loochoo Islands. This string of islands, which forms a pendent to the islands of Japan, was for centuries tributary both to China and Japan. But China was the older suzerain. Tribute was first sent to China in A.D. 1372 and to Japan only 1451. The princes of the Loochoos had also received their investiture regularly from the emperors of China since the time of the Ming sovereign Yung Lo (1403-25); but the islands had been conquered by the Prince of Satsuma in 1609 and since that date their princes had received investiture from the emperor of Japan. When in 1871 some Loochoo Islanders were shipwrecked on the coast of Formosa and killed and eaten by the head-hunters of the mountains, Japan demanded redress for her subjects and China made no counter-claim of suzerainty. Li Hung Chang, however, accepted responsibility
and undertook the chastisement of the Formosan savages; but his decision was almost immediately reversed by the Peking Government, which declared that the tribes in question acknowledged no overlord. Japan then dispatched an expedition of 3,000 troops—which caused the Chinese Government once again to change its policy, and claim the sole right to intervene in Formosan affairs. Chinese troops were likewise sent to Formosa and the two countries seemed to be drifting into war; the intervention of the British envoy in Peking effected a settlement by means of an indemnity. The language of the settlement recorded in Peking on the 31st October, 1874, is important because it was signed by the great Japanese statesman Okubo, who had long specialized in his country's foreign relations. The preamble says:

... Certain Japanese subjects having been wantonly murdered by the unreclaimed savages of Formosa, the Government of Japan regarding these savages as responsible dispatched a force against them to exact satisfaction. An understanding has now been come to with the Government of China that this force shall be withdrawn and certain steps taken; all of which is set forth in the three Articles following.
TRUTH ABOUT CHINA AND JAPAN

Thus Japan assumes successfully that the people of a principality tributary to both China and Japan are Japanese subjects. This principle, once asserted, henceforth guided all her policy in her contest with her great neighbour.

VII

In 1875 some Japanese sailors were fired upon from the Korean forts which the Americans had destroyed four years previously. Once again the forts were levelled and Japan informed China of her intentions. It was not only Chinese claims which were irritating to her but the menace of Russian arms was keenly felt. Not only had Russia, by the use of chicanery, annexed in 1860 the whole Pacific province of Manchuria and founded the great city of Vladivostok, but she had attempted in 1861 to do what the Mongols under Kublai Khan had done—to occupy the strategic island of Tsushuma, which commands the Korean Straits. China gave Korea friendly advice regarding the establishment of amicable relations, but although Japan sent a dispatch to the Seoul Court proposing a treaty it was rejected. In February, 1876, an ambassador and a divisional general, with the necessary troops, anchored
off Korea prepared for peace or war—and a treaty resulted, characteristically signed by the divisional general, in which the independence of Korea was acknowledged.

What did this signify? How was it possible to reconcile such a declaration with the tribute missions which still regularly proceeded to Peking and which were a matter of common knowledge? Did it mean that the new-type relationship which Western arms had forced on Eastern empires—with written Roman Law agreements—must inevitably destroy old cultural claims and the old hegemony? No one knows, but it is not mere coincidence that in the year following this treaty Li Hung Chang should have annexed to China the forty-mile neutral strip on the west, or Chinese, bank of the Yalu River, which for centuries had been a No-man’s-land, because it lay beyond the old boundary palisade. Plainly the move showed fear—a dim realization that a “strategic frontier” was being menaced.

Yet in spite of these things there seems to have been no definite policy regarding the main factor—foreign pressure. In 1881, however, Li Hung Chang wrote a dispatch to the Korean Court advising “limited treaties” with the Western Powers. In 1882 the United States,
still hankering after proper relations, sent a commodore on board of an American gunboat escorted by three Chinese men-of-war; and precisely as Commodore Perry had done a generation before in Tokio Bay, finally signed the first Western treaty.

Immediately after this event we get an important clue. The American treaty had been signed in May: in September Chinese and Korean officials, meeting at Tientsin, come to a written agreement and disclose in a single sentence the real nature of the relationship existing between China and Korea. The preamble to "the Regulations for maritime and overland trade between Chinese and Korean subjects of 1882" begins in this way:—

... All that pertains to the relations of Korea as a boundary state of China has been long ago regulated by fixed rules, and no change is required in this respect. But as now foreign countries entertain trade with Korea by water, it becomes necessary to remove at once the prohibition of sea trade hitherto enforced between China and Korea, and let the merchants of both countries participate in all the advantages of commercial relations; the regulations affecting the exchange of produce on the frontier will also, as time may require, be modified; but the new regulations for the maritime and overland trade now decided upon are understood to apply to the relations between China
and Korea only, the former country granting to the latter certain advantages as a tributary kingdom, and treaty nations are not to participate therein. It is in this sense that the following Articles have been agreed upon.

At last we see clearly. Korea was a "boundary state" precisely as Annam, Tonking, Siam, Burmah, Tibet, Nepaul, Eastern Turkestan, and the Principalities of Outer Mongolia were boundary states, i.e. buffer territories ruled over by lesser kings. Surrounding the ancient Middle Kingdom, which was looked upon as centre of all things because in the Confucian cosmogony the emperors, Sons of Heaven, were necessarily the High Priests of all who acknowledged the sway of Chinese culture, they had a definite and special rôle to fulfil. It is easy to see that the difficulties facing China in the nineteenth century were the difficulties facing England in India, where for the same reasons, although they were given another name, the Russian advance in Central Asia, which was leading to the absorption of the independent Khanates, menaced the whole buffer-territory theory. China’s predicament in Korea was therefore England’s predicament in Afghanistan; intercourse by water had been absolutely and rigidly cut off even between suzerain and
TRUTH ABOUT CHINA AND JAPAN

tributary because the only method of enforcing a veto in the East is to make it absolute. Westernism, of which Japan had become a pretended exponent, was destructive of the old sanction. Water was the element which could not be controlled. It is water to-day which still remains the master-force in the Far East . . .

In 1883 further regulations to control Korean frontier traffic throw further light on an obscure and difficult subject. Chinese and Korean officials, talking to one another in the Liaotung, reveal some of the curiosities of the old relationship. One clause states that "it being one of the prerogatives of the Court of China to draw its supply of fish for sacrificial purposes from the embouchures of rivers situated on the Chinese side of the Yalu and in the Korean district of Pingyang, the people are strictly forbidden to fish there clandestinely". What visions of a long departed past does this not conjure up, the Altar of Heaven and the Temple of Imperial Ancestors in Peking, so many hundreds of miles away, drawing supplies by prescriptive right from this tributary region! Another clause declares just as unemotionally: "Whereas all the territory under the jurisdiction of the Liaotung is Crown land attached to His Majesty's Second Capital and subject to
the rules which formerly received Imperial sanction, merchants who come for the purchase of local produce can only be allowed, whether coming or going, to pass through the sidegates of the Fenghuang palisade passage; travellers who have been turned back from the tribute-road must not choose roads according to their fancy.”

How redolent of the seventeenth century! For “His Majesty’s Second Capital” is Moukden—the original chief city of the little Manchu principality which after fifty years of struggle had captured Peking. And just as miniatures or skeletons of the great Boards of State are maintained even to this day in Hsianfu, which ceased to be the national capital thirteen centuries ago, so was Moukden still spoken of as “the second capital”. And the palisade which appears so casually—forty miles from the Yalu River—is the old Chinese boundary palisade built by the Ming dynasty in the fifteenth century to protect Chinese settlers from Manchu raids—where guards were still maintained in ignorance of the old purpose.

By these marks we see something of tragedy which Westernism, sweeping in by the sea, spelt for an old-world empire.

Meanwhile in the capital of Korea this up-
TRUTH ABOUT CHINA AND JAPAN

setting of the time-honoured past was provoking as desperate a struggle as it had in Japan during the last days of the Tokugawa Shogunate; the Korean royal family, torn by intrigues, was divided into a so-called conservative pro-Chinese party, led by the ill-fated Queen, and a so-called liberal pro-Japanese party. The destruction of the Japanese Legation and the general mob-violence, induced by the signing of the first foreign treaties in 1882, culminated in the landing of Yuan Shih-kai and other generals with 3,000 Chinese troops to back up the Queen’s party. And these were promptly followed by the landing of the same number of Japanese troops.

This meeting of China and Japan face to face after centuries of isolation filled the air with electricity. Instinctively the two nations hated one another. All the jealousy and bad blood of generations seemed to be concentrated in Seoul: and incident followed incident with bewildering rapidity. In 1884 several thousand Korean and Chinese troops under Yuan Shih-kai attacked one of the palaces which was defended by two companies of Japanese infantry. More Chinese and Japanese troops arrive and rumours of war grow. But the pear was not yet ripe; and accordingly in 1885 the late Prince
GENERAL INTRODUCTION

Ito proceeds to Tientsin and signs yet another convention with Li Hung Chang.

In this instrument China and Japan mutually undertake to evacuate Korea: they declare that they “shall respectively accomplish the withdrawal of the whole number of each of their troops, in order to avoid effectively any complications between the two countries: the Chinese troops shall embark from Asan; and the Japanese from the port of Chemulpo”. They also undertake not to send troops without giving prior notice. But regarding the essential issue, the definition of the true status of Korea, neither is yet ready to commit itself, although in an additional clause they “mutually agree to invite the King of Korea to instruct and drill a sufficient armed force, that she may herself assure her public security, and to invite him to engage into his service an officer or officers from amongst those of a third Power who shall be entrusted with the instruction of the said force”.

Following this, American officers arrive and drill Korean troops for a brief space; and England, after a few more months, evacuates Port Hamilton, which she had occupied because Russia seemed about to move south to the “warm water”. But the real issue is Yuan Shih-kai
and the policy of Tientsin. This man, later to aspire to the throne of China, had returned to Seoul as Imperial Resident—having induced Li Hung Chang to consent to this cunning step because Japan only possessed a Minister Plenipotentiary.

And so at last the storm is there on the horizon-line; plainly to be seen by those with vision.

VIII

China, after the lesson of the Tonkin war with France (1884-85), had commenced the fortification of Port Arthur under Li Hung Chang's guidance. She likewise vastly improved her navy, which soon included two ironclads and a number of good cruisers, placing the whole under the joint command of a Chinese admiral and a British admiral. But in 1890 the Englishman lost his post as the result of a petty dispute—and China's fate in Korea was sealed. Corruption and inefficiency soon reigned supreme in the new navy, which might have repeated the performance of the Korean armoured ships of the sixteenth century, but which went into action in 1894 at the Battle of the Yalu with sand-filled shells, and so changed all history.
GENERAL INTRODUCTION

Japan's determination to wage war against China came in 1894—immediately she had signed her treaty with Britain abolishing extraterritoriality in Japan. War was held by her a necessary step not only to consummate her international emancipation but to take from China rights which embarrassed her. The facts that follow have supreme importance to-day.

The British treaty abolishing extraterritoriality was signed on the 16th July, 1894, when events in Korea, due to the so-called Tong Hak rebellion, had led to the landing of both Chinese and Japanese troops. The first act of war, the sinking of the chartered transport "Kowshing" carrying Chinese reinforcements by a Japanese cruiser, did not occur until the 25th July, i.e. until nine days after the treaty had duly been signed in London. In other words, Japan was working by time-table on the accepted Prussian model. Land-fighting was delayed until three days later, Japan only issuing her declaration of war on 1st August, having on the 23rd July broken into, and taken possession of, the royal palace and carried off the Queen and her children, which allowed her to appoint a puppet Regent.

1 Regarding the true explanation of the Tong Hak rising, see Document G in the Appendix.
TRUTH ABOUT CHINA AND JAPAN

The rest of the Powers quickly followed England's example in the matter of extraterritoriality, and in her greatly improved position among the nations it was essential for Japan that the privileges of extraterritoriality in China—which she did not then possess—should be acquired by her, whilst the extraterritorial jurisdiction China possessed in Japan should be forcibly cancelled.

This is one of the deeper reasons for Japanese action in Korea. Although China agreed to the complete independence of Korea almost after her first defeats, Japan was aiming at very different objects. The cession of the Liaotung, or the area included in the old willow palisade, plus the annexed Yalu zone, was but one small thing, just as Formosa was another. The real prize was the reversal of the old relationship between China and Japan—that suzerain China should become the tributary and tributary Japan the suzerain. Everything else is subordinate to this root-idea. The intervention of Russia and her satellites in 1895, which was followed by the brutal Japanese murder of the Korean Queen and the loss of all Korean influence, and then by the Manchurian war—these and many other things are but interruptions in the grand policy—inter-
ruptions due to necessity and to world-influence. The root-idea to-day, as it has been for many years, is to complete the plan of making suzerain China the tributary and tributary Japan the suzerain.

The curious and intricate character of this crisis which necessitates a double policy—one for the West and another for the East—is adequately illustrated in the four chapters that follow.
II

THE OUTLINE OF THE FAR EAST

The writer can lay claim to an intimate knowledge of the Far East and of everything that affects it. Almost his earliest memory of childhood is of a great crowd of many thousands of shouting men, stripped to the waist, and armed with bamboo carriers’ poles, who had swarmed forward determined to destroy the house of his father because five square black characters on the door-plate proclaimed that it was the official residence of a commissioner—one responsible for the levying of taxes. The salt-tax had just been raised, to pay for the Tonkin war of 1884; and these men, coming on shore from the great fleet of salt-junks which were tied up along miles of the Yangtsze River, were trying to secure a remission by intimidation. Characteristically, they were threatening the wrong authority; but long experience had taught them that in a country of compromises violence of any sort is effective as a political argument, and that it
THE OUTLINE OF THE FAR EAST

is better to hit the wrong man rather than no man at all. . . . That was the curious Chinese question thrusting itself on his immature attention, a vast question in many ways, yet nevertheless inherently simple, since it is made up of the crudest economic problems, which have not changed throughout the ages.

Since those days of thirty-five years ago a good deal of water has flowed under the bridges and a good many changes have come. War, and war's alarms, were responsible a quarter-of-a-century ago for the handing-over of China to the international money-lender. With indebtedness came complications and irritations. The year 1900 was signalized by that big 'blow-out' called the Boxer rising; and the settlement which followed was still further complicated by the complete breakdown in 1905 of the fiction of Russian invincibility which had so obsessed the late Lord Salisbury and the present Lord Lansdowne that to it alone must be traced most of the disasters of our own hectic decade. The fabric of Far Eastern relations having been based on balance-of-power, which is only another name for a refusal to face the inevitable, the declension of Russia destroyed the patchwork scheme, and made one of two things certain—that either
TRUTH ABOUT CHINA AND JAPAN

China must win her complete independence or be carved up.

In 1911 a valiant attempt was made on the part of Young China to secure the first alternative by erecting a republic. But, as the writer has sought to explain in a recent work, the attempt was not a great success mainly because the liberal Powers of the world, being every whit as short-sighted then as they have shown themselves in the case of Russia, did not love the Chinese Revolution—only tolerating the elimination of the Manchu autocracy because the bondholders’ interest in the country was not directly affected. At the earliest possible opportunity they assisted reaction in the person of Yuan Shih-kai; subsidized him so that he might destroy all his rivals and the embryo of parliamentary government into the bargain; and then were mightily surprised that he should have aspired to a burlesque kingship which killed him and left the country pretty well wrecked.

The results of the republican experiment in China, so far as Europe was concerned, were thus counted quite negligible. It was said by professional diplomats, who probably know less about modern politics than any other body of men, and who have been badly frightened
THE OUTLINE OF THE FAR EAST

all the world over by the rise of popular power, that the Chinese were not fit for self-government, whatever they may mean; and so when President Li Yuan-hung assumed office in the summer of 1916 the Powers had nothing left in the way of a reconstructive plan excepting to induce China to enter the war, hoping that this act would tide things over, and serve to mask five years’ discreditable diplomacy. On 14th August, 1917, China did declare war on the Teutonic Powers—being speeded to take that decision by Viscount Ishii’s special mission to the United States, which it was feared had sinister objects. But the Chinese declaration was stripped of half its international significance because the country was once more at war with itself—North facing South, and each side declaring that the other was a rebel and seeking by force of arms to subdue it. And as this kind of provincial militarism has become just as much the enemy in China as Kaiserism has been in Europe, it is well carefully to consider it.

The modern army of China is the child of the collapse of 1900. It is true that prior to the Boxer explosion a few ‘model’ divisions had already been organized as a result of the disastrous Japanese war of 1894-95. There
was, for instance, one division of Northern troops under a General Nieh which, although the fact has never been properly chronicled, fought with the utmost gallantry against the international armies around Tientsin, advancing against entrenched positions until it was almost entirely destroyed. There were also some well-trained troops at Nanking and Hankow, and above all there was Yuan Shih-kai's picked division in Shantung.

It was this division which was the germ of the modern Chinese army. When the fugitive Empress Dowager Tsu Hsi and the Emperor Kwang Hsu returned to Peking from far-off Hsianfu in 1902, and sanctioned Yuan Shih-kai's scheme for a National Army, events marched so rapidly—for Asia at least—that by 1905 Yuan Shih-kai as viceroy of the metropolitan province of Chihli and chief of the Army Board was able to hold army manoeuvres in which 100,000 well-trained men participated.

At the time this created a great sensation: it was felt by all far-seeing men that Yuan Shih-kai was deliberately raising a force to take the place of the Eight Banners, or Manchu army-corps, which had been the means of effecting the Manchu conquest of China in the seventeenth century and whose organization—
THE OUTLINE OF THE FAR EAST

on paper—survived although the men were entirely worthless and unequipped. Japan, who had just beaten Russia in her Manchurian war, began to realize anew that China was not really a negligible quantity, and that given an army and navy of even moderate efficiency China could re-establish the Far Eastern situation which had existed prior to the Korean war of 1894. The writer believes that a portion of the astonishing diplomatic story which has been enacted in Peking in the period 1914-18 is due to this one fact—namely, the Japanese fear of a militant China.

Had the revolution of 1911 not created an interregnum, the modern Chinese army would have reached its full authorized establishment (thirty-six field divisions with a peace-footing of half-a-million men and a war-footing of something over a million) at about the time of the commencement of the World War. But the revolution broke up the reorganization scheme long before it was completed; mixed the old-style and the new troops; and by lowering the standard and introducing polities into the army destroyed unity and discipline.

What Gambetta found in clericalism republican China indeed soon discovered in her militarists. The army, reinforced by myriads
of men who had managed to acquire firearms, was plainly the enemy; for the soldiers openly declared that they had made the revolution, and that without them the revolutionary leaders could not have lived an hour. This was unfortunately only half the truth and therefore as dangerous as all half-truths inherently are. For the revolution was as much the work of the foreigner as it was of the Chinese. The Manchus could never have been dethroned had their borrowing-power on foreign markets not been deliberately cancelled by the action of foreign diplomacy, which yielding to the clamour of publicists declared that the Western world would maintain strict neutrality until a decision was reached. Consequently, the army in spite of its boast was really dependent on an alien paymaster who could only be reached by a method which its leader and creator—Yuan Shih-kai—had brought to a fine art. This method was a mixture of bluff, promises to rival legations, and threats—above all, threats that if hard cash were not forthcoming all China would go up in flames. By finding the monthly quotas for the troops Yuan Shih-kai became supreme.

Only on the surface, however. For the army had become contumacious even before the
THE OUTLINE OF THE FAR EAST

Manchus had abdicated. Its Northern leaders, roughly grouped together under the name of the Peiyang Party—Anglice, the party of the Northern seas or, better, the Northern vice-royalties—had nearly all risen from humble captaincies in Yuan Shih-kai’s original model corps (organized in 1896 after the Korean war) to divisional commands; and one and all they coveted the direct control of provinces. In other words, the revolution, having abolished the viceroy’s, who had ruled over single or linked provinces, and substituted the Tu-tuh (now Tu-chun) or military governor for each province, the aim of all these men was to rule at the provincial capitals where provincial taxation was centred and where money necessarily was to be found.

By the use of terrorist methods, which commenced in Peking on the memorable 29th February, 1912, when the capital was sacked by the Third Division, these divisional commanders soon became the most solid factors in the very fluid post-revolutionary China. Commander after commander received as reward for fealty to Yuan Shih-kai the gift of a provincial capital; and although a parliament or assembly of some kind has been in session in Peking most of the time, such real power as
there has been since 1911 has been divided among these men.

Nevertheless, the idea of constitutionalism—and the necessity of civil rule being made supreme—has never perished. That idea is stronger to-day than it has ever been before—it is the goal all educated Chinese in their heart of hearts are determined to attain. And because civil rule as opposed to militarism is the proclaimed object of the South-Western group of revolting provinces with their capital at Canton, let us see precisely how the matter stands.

The struggle between North and South in China is very old. In one form or another it has gone on for eight hundred years—in fact ever since the Kitan and Chin Tartars burst through the Great Wall in the eleventh and twelfth centuries and commenced the Tartar military supremacy in North China which has so profoundly modified the old Chinese ritual of government. For although the Ming dynasty (Chinese) broke the Mongol supremacy, and moved the capital from Nanking to Peking five hundred years ago, the Mings were soon enough ousted by the Manchus (Tartars again), who stereotyped nearly three centuries ago the conception of a military domination directed from
THE OUTLINE OF THE FAR EAST

Peking—a domination which, no matter how unreal it may have become, still lives in Northern China as a political concept, tradition playing such a powerful rôle among the educated and uneducated alike that no amount of argument can kill it. This, then, is the real quarrel between North and South in spite of all talk about constitutionalism,—namely, that the Peking tradition of a military domination has not been killed and cannot be killed until universal education has definitely relegated it to the limbo of forgotten things.

From the beginning of the revolution—that is, from October, 1911—the Northern army was not only filled with this tradition but was conscious of its strength. A number of the Northern provinces had so far completed their reorganization that Yuan Shih-kai at the time of the Manchu abdication had certainly a quarter-of-a-million fairly well-found troops under his direct orders. South of the Yangtsze the situation was very different. Some provinces had no more than mixed brigades of reorganized troops; and although five Southern provinces—Hupeh, Kiangsi, Chekiang, Kwangtung, and Yunnan—could each muster at least one good modern division with artillery and transport, they were without proper arsenals and were
TRUTH ABOUT CHINA AND JAPAN

vastly outnumbered by swarms of old levies. Moreover, all the machinery of army administration, as well as all the reserves of arms and ammunition, were under the control of Peking; and when we add that the borrowing-power had been inherited by those who were ten minutes from Legation Street, it will be seen that the odds could not but be heavily in favour of the North.

Nevertheless the South remained determined regarding the necessity of substituting effective parliamentary government for military dictation. The Southern leaders, of course, knew that they had not really won in 1912 when the infant emperor Hsuan-Tung abdicated, and that the big battle had yet to be fought. The abdication had been due primarily to Yuan Shih-kai, who was influenced by three things—hatred of a dynasty that had desired his blood; ambition to rule the nation himself; and an inveterate habit of following foreign opinion because that opinion controlled the stock markets on which China had lived for twenty years. Consequently, when the Manchus had been eliminated, there remained for him two controlling impulses and only two—his ambition and the foreign money-market. Everything else—parliament, people, and provincial capi-
THE OUTLINE OF THE FAR EAST

tals—was for him mere shadow-play and not reality. It is only when the problem is thus envisaged that what took place can be understood.

In the spring of 1913, i.e. considerably more than a year later than it should have occurred, the first republican parliament with a large Southern majority met in Peking in spite of the assassination of their leader Sung Chiao-jen at Shanghai under Yuan Shih-kai's orders. Not only was there this majority, but by virtue of the provisional constitution, which was the law of the land, the Southern leaders believed that they could effectively control Yuan Shih-kai by reducing him to a figurehead. Quickly disillusioned by his signature without parliamentary endorsement of the great Reorganization Loan, which gave him the one thing he needed to secure open mastery—money, they nevertheless held to their point for several months, only inciting open rebellion in the end because they saw that force was still the only argument.

This trumpery affair of July and August, 1913, commonly called the Second Revolution, which was over in a few weeks thanks to the military strength of the North, further weakened the South by allowing the Northern divi-
sional generals, who had hitherto not been in office south of the Yangtsze, to occupy the whole line of provincial capitals running from Wuchang (Hankow) to the sea. By the end of the revolt the North was therefore considerably stronger than it had been in 1912. Not only were fourteen out of twenty-one provinces openly in its hand—forming a solid block of territory from the Amur to a point south of Shanghai—but portions of the remaining seven provinces were menaced, making the Southern outlook as black as it could be.

Had Yuan Shih-kai not yielded to the last of the three impulses which had dictated his entire policy from 1911—his ambition—he would possibly be alive to-day as ruler of a very centralized and very bureaucratic commonwealth. But in 1915, yielding to the importunities of his family circle and of his friends—who declared that the moment had arrived for the substitution of a legalized régime for his de facto dictatorship—he gave his consent for the monarchy movement and thereby signed his death-warrant.

There is even to-day a controversy among scholars as to precisely why there should have been such a pother about his attempting to do what so many Chinese had successfully done.
THE OUTLINE OF THE FAR EAST

in their four thousand years of written history. From the beginning of time—that is, from the days of Yao and Shun, who are said to have flourished long before the Tartar shepherd kings, the Hyksos, invaded Egypt (2000 B.C.)—Chinese citizens have been upsetting old dynasties and making new ones. The right which the early emperors had of nominating anyone they pleased as successor—the doctrine of the blood royal being unknown—was held to be good warrant for an illustrious minister mounting the Dragon Throne, the Imperial yellow signifying a priesthood rather than a military kingship. Yuan Shih-kai's friends indeed declared that really constitutional monarchy, in which Chinese thought and Western political thought would be impartially mixed, would kill the Tartar-military taint attaching to Peking, and bring national contentment. But his enemies retorted that not only was his sanction of such a scheme deliberate treachery—and the revelations since made regarding the so-called national referendum certainly disclose unblushing fraud—but that what he aimed at was simply the selfsame family rule, with all its corruption and sycophancy made ten times worse with the help of well-trained men—who would have the skill of scientific criminals. Moreover, those
in touch with political life were assured that since Yuan Shih-kai had rejected the Japanese protectorate which Mr. Hioki, the Japanese plenipotentiary, had offered him at the time of the Twenty-one Demands (18th January, 1915), Japan would certainly defeat his plan by hook or crook. Consequently, the outbreak of the so-called Third Revolution on Christmas Day, 1915, this time not on the Yangtsze but in the inaccessible province of Yunnan, foreshadowed his fall, since even the Northern generals refused to support him generally.

On the 6th June, 1916, Yuan Shih-kai died a broken-hearted man. The South once more was jubilant, declaring that at last it had won. But in 1916 as in 1912 it was not really a victory for the Southern party: it was a qualified victory for certain Southern military leaders in certain Southern provinces, Tsai-ao, the brilliant young Yunnan leader, who had done all the fighting, dying before he could consolidate his gains and make his weight really felt. Vice-President Li Yuan-hung, who now assumed office as President, although a thoroughly honest man, was a mere hostage in Peking without a single soldier from his native province of Hupeh to support him. It required the revolt of the whole navy to force
the Northern military party to agree even to the restoration of the provisional Constitution and the re-convocation of the dissolved Parliament of 1913; and, therefore, under the surface, when Parliament reassembled it was simply the situation of 1913 over again, minus Yuan Shih-kai. When the war-issue came up early in 1917, owing to America's invitation to China to join in the battle against submarine piracy, the question of the permanent Constitution had already nearly wrecked Parliament, the Southern majority not being sufficient to force through the vital clauses. Consequently, just as Yuan Shih-kai had used the signature of the great Reorganization Loan to break the power of Parliament in 1913, so in 1917 the Northern Party began to use the question of a declaration of war against Germany as an intimidation against the majority party, being greatly fortified by the attitude of the Allied legations, who so greatly desired that step to be taken that everything else was held immaterial.

Thereupon began an extraordinary struggle. President Li Yuan-hung seemed to have it in his hands not only to settle the constitutional question by a display of firmness but to define once and for all China's foreign policy. But, being without competent help and without
TRUTH ABOUT CHINA AND JAPAN

troops, his nerve failed him at the psychological moment; and illegally he dissolved Parliament after diplomatic relations with Germany had been broken off, but before any formal declaration of war had been made. At the same time adding folly to his great mistake, he had called to Peking the illiterate General Chang Hsün, who carried out a burlesque restoration of the Manchus—a mockery which was dissipated by a brief fusillade. The result was to leave North and South worse divided than ever; the Northern military party being once more in firm control of Peking, whilst the fugitive Southerners were once more forced back to the home of the Revolution—Canton. For eighteen months the situation has continued like that, with fitful fighting along the northern edge of the seven south-western provinces, and with the foreign Powers looking on helplessly and wondering whether it would ever end.

Whilst the expression "the foreign Powers" is still in general use to signify the whole group of nations in treaty relations with China, recent events have proved that the proper way of expressing foreign political activities should be "the foreign Powers and Japan". For although Japan is an ally of the Allies, and although since her first treaty of alliance with
THE OUTLINE OF THE FAR EAST

England in 1902, in which Chinese integrity was so carefully guaranteed, she has repeatedly exchanged agreements, notes, secret memoranda, and what not with half the Powers of Christendom, affirming the selfsame principles, her Chinese policy is as purely a Japanese product as are the geta (wooden clogs) of the Japanese people. That policy clatters noisily along the international highroad just as if it were shod in resonant geta so that everyone can see and hear it; but every so often the clogs are slipped off and Japan enters her neighbour’s house in her stockinged feet (as good manners demand); and then very secretly behind the shoji (screens) she whispers that unless her tutelage is accepted it will be highly unfortunate for China.

It would be mere repetition of things already outlined to re-examine the problem of the Chinese Revolution from the Japanese standpoint. But this at least ought to be said: that nothing which has occurred in the Far East since the Perry expedition of sixty years ago has more disconcerted Japan than the institution of republicanism at her very doors. Having with vast difficulty and trouble adjusted her national life to the requirements of the modern world from the time of the Restoration of 1868 to the
TRUTH ABOUT CHINA AND JAPAN

Treaty of Portsmouth of 1905, she viewed with real horror Westernism sweeping in on China like a torrent and threatening entirely to capture it under the name of Democracy. For the isolation which existed under the Tokugawa Shogunate for two and half centuries still lives spiritually in Japan: Japanese national life remains a curious compound of adjustments and half-tones, a rather delicate thing that like a hothouse plant might easily be blasted if left exposed to the cold winds of Reason. To preserve in the second decennium of the twentieth century not only a belief in the divine right of kings, but to propagate officially in every school, in every college, and in every university of the land the cult of the actual divinity of the Emperor, emphatically necessitates a juggling with the problems of the other world of an almost fantastic nature. In the writer’s belief the secret of Japanese diplomacy may be traced to this unreal foundation of government, which is further complicated by the haunting conviction that the Western races are really stronger, more virile, and more efficient than the races of the East and must infallibly dominate them whenever it comes to an open trial of strength. And if we take this hypothesis as a starting-point obscurity vanishes.
THE OUTLINE OF THE FAR EAST

Let us explain. Already after the Russo-Japanese War—i.e. fourteen years ago—all classes of Japanese knew that their material development was wholly insufficient for the fierce competition of the modern world, and that Russia had really been defeated by a miracle. Crushed by taxation to pay the war debt incurred, the Japanese people instinctively favoured a double policy—the exploitation of China for her raw products and the stimulating of Chinese opinion in such a way as to secure, if not the union of the yellow races, at least the general acceptance of the idea that internationally the Far East must be considered as one entity under the hegemony of Japan.

It was when Japanese people were in this mood that the Knox Neutralization scheme of the Manchurian railways was presented to the world (1908) as a solution for the political-territorial tangle which the Russian war had left. That such a proposal, in the circumstances narrated, should have struck the Japanese people much as the Kaiser’s telegram to Kruger struck the British people at the time of the South African imbroglio is not at all surprising. It was looked upon as unwarranted interference, almost as an affront. For there was the diplomatic record of the days prior to
the Manchurian war to prove that Japan had deliberately and categorically offered to abstain from all interference in Manchuria if Russia would enter into a similar commitment regard- ing Korea. The fact that the Japanese had been forced to fight a ruinous war, with no real margin of safety either on land or on sea, because that offer had been refused, in their opinion entitled them to a consideration which the jealous Western world was not giving them. It is necessary to insist upon this half-forgotten matter even to the point of weariness, as it is the secret of much tortuous diplomacy. For when the Neutralization scheme fell through, and Japan found the alternative plan for a parallel railway (the Chinchow-Aigun trunk-line) being pushed by British and American interests in 1909, she became convinced that a new battle had already commenced having for object her economic restriction on the Asiatic mainland. And although the formal annexation of Korea was successfully accomplished in 1910, in 1911 the British Government insisted on a revision of the Anglo-Japanese Alliance Treaty, inserting a clause which made the inapplicability of that instrument to America absolutely clear.

It was with these things weighing heavily on
THE OUTLINE OF THE FAR EAST

Japan that the Manchu abdication of February, 1912, came—after a British refusal to countenance armed force being lent to retain the dynasty. And when it was plainly shown that Yuan Shih-kai, who for quarter-of-a-century had been the arch-enemy of the Tokio Government, was being supported by all the Western Powers alike as an instrument to continue the politico-financial policy of the pre-abdication days, every group of Japanese became convinced of the necessity of drastic action.

The outbreak of the World War gave the needed opportunity. Japan consented to declare war on Germany only on her own conditions. The mishandling of the Tsingtao question by the Allies—the British Government, for instance, could easily have induced Yuan Shih-kai to deliver a twenty-four hours' ultimatum on Germany to evacuate Chinese soil, since the President of China had 50,000 troops almost at Tsingtao's back doors—allowed Japan to make war as if by favour, using the belligerent conditions throughout the world to hasten on a policy which had nothing to do with the issues being so savagely fought out on European soil. And when Yuan Shih-kai, tardily recovering from the surprise into which
he had been thrown by the international catastrophe, declared a war-zone in Shantung province so as to restrict the Japanese military effort, and then cancelled that zone as soon as Tsingtao had been captured, Japanese irritation reached such a point that they were forced to action.

On the 18th January, 1915, they accordingly served their famous Twenty-one Demands on him; and although a violent press defensive did something to mitigate the terms, (Group V, which was the outline of a Japanese protectorate being withdrawn,) by means of an ultimatum they forced through all the Manchurian and Shantung articles, with many other valuable closed-door privileges which will be later the cause of international conflict.

Yet even this left Japan dissatisfied: she was still fearful that China would enter the war and thereby regain a certain liberty of action. The direct efforts the Tokio Government made at the end of the year 1915 to prevent such a consummation were followed in 1916 by direct efforts abroad to improve Japan’s international standing. It was naturally at Petrograd that Japanese diplomacy first set to work; and as the Bolshevist publication of the Secret Treaties has shown, the Japanese succeeded so
THE OUTLINE OF THE FAR EAST

well that in 1916 they wrote a reinsurance of their China policy with Russia aimed at any third Power who might wish to oppose their China schemes.

But the Russian Revolution totally destroyed the value of this undertaking, whilst almost at the same time China, invited by America to do so, in a most surprising and unexpected way broke off diplomatic relations with Germany, and was on the eve of a formal declaration of war. Seeing the prize once more slipping through their fingers, the Terauchi Ministry developed in the late spring of 1917 a new policy.

Deliberately they associated themselves with the Peiyang military party, promising every kind of financial support if this party would fight under their banner. Nominally acquiescent, the Peiyang party, in spite of the odium cast on them by their Southern adversaries, were still first and last Chinese, i.e. men who knew perfectly well what Japan's plans really were, and who only pretended that they were in entire accord with them. Thus once more there was a play within the play, the number of factors involved being so immense that most people soon lost sight of the main issue—which was that Japan was for the time being
TRUTH ABOUT CHINA AND JAPAN

merely concentrating on one matter, i.e. pushing Peking to pawn every liquid asset so that Tokio’s claims would be so overwhelmingly strong that when it came to a settlement of the Far Eastern question her wishes would be law.

It was under these auspices that Viscount Ishii sailed for the United States, a signal for the keen-witted that things were still deemed unsatisfactory by the Tokio Government and that the last refractory element must be forced into the melting-pot. Finding that two months’ sojourn in Washington yielded no tangible results, the Japanese Special Envoy became almost desperate. Then followed a brief and curious departure for New York, with a brief and curious return to Washington, resulting in the Lansing-Ishii Notes of the 2d November, 1917. That this exchange of notes was very largely prompted by the reports of serious developments of Japanese policy if nothing were done to placate Japanese public opinion, there can to-day be no doubt. The manner in which German emissaries were constantly attempting to enter into relations with Japan—notably at the Scandinavian capitals—is well-known to those behind the scenes; and although Japan remained loyal in word and in deed during this
THE OUTLINE OF THE FAR EAST

dangerous pause in the World War, that temptations of an extraordinary character were dangled before her eyes is an undisputed fact.

And yet even these Notes, with their untenable doctrine of geographical propinquity, did not capture will-o’-the-wisp China. They assisted, no doubt, in the promotion of the peculiar Japanese policy of the period 1917-18, when so many hundreds of millions of dollars were lent to the Peking Government on ruinous terms to be squandered on a meaningless civil war; but internationally they were failures. England, still the chief Western Power in Eastern Asia, did not recede from the position she took up in her treaty of 1911—that she possessed special interests in China as well as Japan, and that these special interests, British as well as the Japanese special interests, must be maintained. This is a very important fact which has never been given its proper importance: it is a fact which even now troubles Japan.

And then at last Bolshevism, invading Asiatic Russia in the spring of 1918, brought a new complication; for although there never was any German menace to the Far East as Japanese agents declared, there was certainly a menace to Japanese plans. In the long story
TRUTH ABOUT CHINA AND JAPAN

of the intrigues and counter-intrigues at Harbin—during the first half of 1918—in which Japan characteristically backed the reactionary General Horvath, master of the Chinese Eastern Railway, in order to gain control of the railway—we see a fire being fanned to a blaze so as to allow deft fingers to secure the chestnuts. Had the reactionary Russian element in the Russian Far East, and among the Cossack communities of Transbaikalia, not been incited to attack the Bolsheviks, there would not have been any of the complications which still await solution.

But Japan required frontier warfare, since these activities on the rim of Northern Manchuria allowed her to force through the Sino-Japanese Military Secret Agreement which seemed to bind the Peking Government to her chariot-wheel for the term of the war; and although the astute use made by the United States of the Czecho-Slovak impasse finally brought Allied intervention at Vladivostok and prevented the fruition of the full plan, which was the Japanese military occupation of everything east of Lake Baikal, it is necessary to note that Japan has acted independently, in spite of the Allies, in Northern Manchuria, in Transbaikalia, and in the Amur province, and
THE OUTLINE OF THE FAR EAST

is to-day virtual master of Harbin, of Chita, and of Blavовestchensk.¹

Here we must pause, for the involved outline is now complete. How the Chinese imbroglio is to be solved, how a reasonable balance is to be reconstituted for the whole Far East, and peace thereby assured—these things must be separately treated, since they are every whit as complicated as this discussion which has only touched the fringe of the subject.

¹ The very latest movement, the Pan-Mongolian movement led by the Cossack-Buriat leader Semenoff from Chita, is believed to be the work of Japanese agents. Evidence is accumulating that Japan has followed a set plan since 1917.
III

THE SETTLEMENT OF THE CHINESE QUESTION

In an initial essay the writer traced the general outline of the problem as it appeared to him from an intensive study conducted on the spot; and although exception may be taken to some of the conclusions he arrived at, it should be carefully noted that these conclusions are to-day the common possession of every unbiassed political student in Eastern Asia who is able to think of the Chinese as normal human beings and who does not deny that they are entitled to international justice.

Two grand facts should emerge from the analysis made; first, that although China has officially and publicly thrown overboard not only her ancient civilization but her system of government, she has not yet succeeded in substituting anything more solid than the theory of Western practice; secondly, that Japan, following the path of empire that other virile nations have pursued in the past, and believing that the World War has entitled her to a cer-
SETTLEMENT OF THE QUESTION

tain local primacy, is pushing deeper and deeper into Continentalism and aspiring more and more openly to the political, commercial, industrial, and military hegemony of all Eastern Asia. The question which at once arises is—can these two facts be reconciled; that is, is it possible for the rebirth of China to be consummated in the face of the imperialistic ambitions of her neighbour? The answer is both yes and no: yes, if the dominant factor in the situation, the maritime Powers, adopt the right policy; no, if instead of enforcing an honest and well-balanced judgment on an admittedly complex and exasperating situation, they follow Pontius Pilate and wash their hands of the whole business.

We have said the maritime Powers—why the maritime Powers?

All the world knows that the British Treaty of Nanking of 1842 and the Perry expedition of 1853 broke up the ancient seclusion of China and Japan and introduced these two countries anew to one another, besides introducing them to Western civilization. But all the world does not know that, dating from this period of seventy years ago, the action of the whole group of maritime Powers, including even the smallest Western nations such as Portugal and
TRUTH ABOUT CHINA AND JAPAN

Denmark, followed more or less consistent lines under British-American leadership, until the collapse of China in the Korean war destroyed what was sound and creditable in the past record; and by putting the maritime Powers ashore in leased territories and spheres of influence in a vain effort to combat Tsarism and Japanese imperialism, gave policy a wrong twist, and produced general disarray. The conditions which we now face have their origin, then, in events exactly twenty-five years old. They all come by direct descent from the Korean war of 1894-95; and if we are to find a radical and lasting solution for all the perplexing ills of the day it is from the Korean period that the work must commence.

Let it first be understood that the annexation of Korea by Japan in 1910 was an intolerable and unnecessary mistake. The acknowledged protectorate which had existed in that peninsula as a result of the Manchurian war of 1904-05 was all that was necessary to safeguard Japan's strategic interest: anything more than a protectorate inevitably constituted an international danger. For if England requires in Egypt no more than paramountcy to guarantee a vital waterway in her water-empire, certainly Japan has satisfied strategy when she has se-
cured that no hostile forces can seize this hilly promontory which reaches out to within one hundred miles of her coasts. Had that unimaginative statesman Lord Lansdowne really known anything of the history of Asia, he would never have indited his famous dispatch to the Russian Government in 1905, in which he declared that Korea was a region which fell naturally under the sway of Japan—when there was voluminous history since the days of the T'ang dynasty (A.D. 600-900) to prove that Korea fell naturally under the sway of China, and that whenever another Power seized control, it was only to use it as a highway to attack Cathay. . . .

The annexation, we say, was an intolerable and unnecessary mistake because of its immediate non-Korean consequences. It made Japan formally and perpetually a Continental Power—that is, gave her an actual stake on the mainland of Asia, a state of affairs which had never previously existed. It committed her to maintaining a large garrison to overawe the Korean population, which was violently hostile. It incited her to extend this land-empire under thinly-concealed forms into Southern Manchuria, by giving the railway system which she had captured from Russia a special character,
which later she further accentuated by uniting it with the Korean railway system, thus making a Chinese railway and a Japanese railway one and the same entity. It encouraged her to adopt, on the outbreak of the Chinese Revolution and the disappearance of the Manchu dynasty, the doctrine Germany had adopted regarding the Anglo-German understanding of 1900—because Germany had then a secret agreement with Russia—that Manchuria must be held as outside the scope of any agreement regarding China, China meaning China Proper, although this Western geographical distinction is unknown among the Chinese themselves, who for many hundreds of years have treated all Chinese-settled territory precisely on the same footing. Finally, with the outbreak of the European war, it awakened in her the ambition to acquire openly dominant rights northwards to the Amur River, and westwards to the Gobi Desert—the whole original empire of Manchus, which was a Manchu-Mongolian realm governed from Moukden and including by alliance all the banners or "hordes" of Tartary—a thing her military officers declared easy of accomplishment. The complications and irritations which have attended Japanese participation in the Allied intervention in the Russian
SETTLEMENT OF THE QUESTION

Far East are the natural children of this strange mésalliance between an island-empire and the Asiatic mainland; and the almost savage manner in which Japan has tried to seize sole control of the Ussuri railway and the Chinese Eastern railway—deliberately wrecking for many months all American attempts under the Stevens Commission to better Russian communications, and starving millions of people in Siberia in consequence, form a sermon on political morality as eloquent as the Sermon on the Mount.

These things have a close and intimate connection with the Chinese question: they are in the nature of the necessary introduction to the settlement. For unless they are closely and intimately associated in the mind as a very large part of the reason why China makes no progress, it is impossible to convey to those who live far distant from these scenes an adequate appreciation of the reality of China's difficulties. The presence of Japan in Korea as lord of the soil; her holding of two fortified areas on the Chinese coast, with their connecting railway systems; her advance into Transbaikalia and inner Mongolia with important military forces, all these things are every whit as paralysing to Peking as the occupation of
TRUTH ABOUT CHINA AND JAPAN

Belgium and the Northern French railways by the Germans was paralysing to Paris; and it is the refusal to recognize that there is absolute analogy in such matters which makes discussion of China's improvement so illusory.

The first and most essential step in the building-up of the new Chinese State, if that is really desired, is to have it accepted categorically by all the Powers alike that all railways on Chinese soil are a vital portion of Chinese sovereignty and must be directly controlled by the Chinese Government: that station-masters, personnel, and police-troops must be Chinese citizens, technical foreign help being limited to a set standard; and that all railway concessions within the territory of the Republic without exception, from the Amur River in the extreme North to the Red River in the extreme South, must henceforth be considered as Chinese national property to be handed over as soon as circumstances permit to the National Railway Board.

The test-case which will come immediately before the Peace Conferences is the German Shantung railway,¹ a system of under five hun-

¹ The reader is invited to study carefully the two Shantung Railway Agreements in the Appendix, forced through just prior to the Armistice and never ratified.
dred kilometres, very valuable extensions of which Japan has claimed as an inheritance from the original German concessionaires. This state of affairs, if left untouched by an International Act such as has been proposed, will gradually create a railway enclave on the Manchurian model in the heart of old China. For along the course of such railways, new railway towns inevitably spring up, bringing all the complications which conflicting jurisdiction creates. To solve this conflict the stronger Power first employs force; then, to give its authority a deeper meaning, it sets up its own courts; administers so-called justice; and sends its police-officers far from the zone of the railway to satisfy its judgments. This is already what has happened in Shantung; infallibly it will happen wherever Japanese railways go.¹

Here, then, is international business of the first importance which cannot be brushed aside. It is absolutely essential that when this test-case comes up stout defenders be found who will realize that a drama as real to the Chinese people as Kaiserism has been to the European peoples is in process of being enacted; and that beneath the surface every principle for which

¹ Regarding this railway question, see the remarkable facts disclosed in the secret agreement, Document I, in the Appendix.
TRUTH ABOUT CHINA AND JAPAN

the war has been fought is at stake—to be honoured or disavowed.

For in the economics of modern communities, communications have acquired such vast significance that it may be truly said that they constitute to-day the most tangible evidence of sovereignty; and that if they are left in the hands of aliens, surrounded by their own troops, what you have is a de facto military occupation, which can be followed only by more war or by open annexation. No one with any acquaintance with recent history can deny this elementary proposition; and all arguments that the Chinese administration is unfitted to assume control are placed out of court, seeing that the number of foreign railway experts employed in the National Railway Board is constantly growing and that British-constructed railways in China have for a generation been peacefully administered on a system which has never brought the conflict which is inevitable whenever Japanese interests are involved. No matter what attitude is officially adopted by the Great Powers at the Peace Conference—no matter how much they may wish to avoid any discussion at all, the Chinese railway issue will be irrevocably forced on the world’s attention in the near future, as there are ten thousand
SETTLEMENT OF THE QUESTION

miles of delayed railways to be built, and ten thousand troubles will spring from them unless obscurity and obscurantism are forthwith banished.

For lagging not far behind the urgency of this railway matter, is the whole question of Chinese trade taxation—a question which has never been more than hastily touched upon and as hastily dropped by foreign negotiators because it has hitherto been beyond their ability and vision to deal with it. Viscount Grey, in a recent speech which referred to the League of Nations and the good one nation can do another, instanced the Chinese Maritime Customs as an example of successful alien administration, showing by his citation that he was ignorant of the facts. The late Sir Robert Hart, the originator and organizer of this system, which in the popular imagination is supposed to insure the merchant and the manufacturer a successful entry into China, was something of a philosopher and a good deal of a diplomatist; and consequently he was discreet enough not to reveal to the world that he was not doing what he was supposed to be doing. The administration which he erected was simply an accountancy, which was able to justify itself because it was dealing with a foreign
TRUTH ABOUT CHINA AND JAPAN

thing—the steamer—and which was acclaimed as model and perfect when loans were secured on its receipts, because it made bondholders believe that their interest-coupons were in charge of an institution as solid and as permanent as the Bank of England.

Yet as a matter of fact the Maritime Customs has never touched Chinese life or economics in the slightest, nor has it greatly facilitated trade, which should be its chief function. True, it has enabled merchants to load and unload their cargoes on a water-front against a fixed tariff; but ten minutes beyond that water-front barriers as high as mountains may and do exist,—with the markets irrevocably hidden behind them. To those who know that China’s foreign trade still only amounts to four silver dollars per annum per head of population (the lowest percentage in the world for the greatest nation of small dealers that has ever existed) the Chinese Maritime Customs is a mere make-shift; a monument to the fierce fight which the maritime nations carried on in the early part of the nineteenth century regarding their inherent right to ports of entry along river and coast; a record of the fact that the Dying God—the Emperor—could not find officers to collect his duties during the great Taiping Rebel-
SETTLEMENT OF THE QUESTION

lion: a proof that the foreign consulates were honest enough to do it for him.

For at the same time that the Maritime Customs came into being as a quasi-foreign creation, the Taiping Rebellion and the loss of great revenues created likin, a system of petty levies carried out by means of barriers placed wherever trade passes, which because it accentuates provincialism undoes all the good the Maritime Customs should do with its fixed tariff. Until some Power does for all China what Prussia, in spite of her sins, once did for all Germany—that is, creates a Chinese Zollverein, or Customs Union, making absolute Free Trade within the territories of the Republic a fact—commerce in China will continue to be a medieval enterprise, inviting medieval diplomacy suitable to the courts of petty princes and amounting in the gross to little more than the trade of Switzerland.

Sixteen years ago—to be exact, in 1902—England attempted to be that Power and in the Mackay Treaty, signed by Lord Inchcape in Shanghai, she agreed to a large tariff increase, abolishing likin in the famous Article VIII, on the strict understanding that the treaty was to be inoperative until all the Treaty Powers had signed identical instruments. In 1903, largely
because Russia in Manchuria was then such an international peril, America and Japan followed suit—making the same reservations whilst they introduced the same clauses, thus securing that one more pious hope was enshrined in the dust of Chinese archives, to be left there indefinitely like an Egyptian mummy. Since then nothing has been done—nothing for sixteen years; and in the routine decennial tariff revision which has just taken place in Shanghai, Japan, until the Armistice in Europe of the 11th November, placed every obstacle in the way of China, even acquiring an effective five per cent. levy which has been her treaty right for sixty years.

As in railways so in Customs matters, it is once again Japan that renders so difficult the task of real reform, not only in the matter of treaties but in the matter of the daily routine. At all ports where Japanese commissioners of Maritime Customs hold office, it is undeniable that centres of the contraband trade have been established, opium and its derivatives being so openly smuggled that the annual net import of Japanese morphia into China (although this trade is forbidden by International Convention) is now said to be twenty tons a year—an amount sufficient to poison a whole nation.
SETTLEMENT OF THE QUESTION

In the case of Tsingtao it has been proved beyond a doubt that, since the Japanese military occupation, opium has been introduced as military stores on such an immense scale as to give the authorities a royalty of several million pounds sterling with which immense tracts of land round Kiaochow Bay have been purchased, so that no matter what the Peace Treaty may say regarding evacuation and handing back to China the German lease, Japan will absolutely control this outlet to a crowded hinterland, and thus do much to secure her commercial supremacy for all time.

Now if the free nations of the world desire that a vastly increased Chinese trade shall assist in wiping-out the ill-effects of the European cataclysm which has destroyed the accumulated wealth of half a century, the establishment of a Chinese Zollverein—that is, complete Free Trade within the limits of Chinese territory, with a complete abolition of all provincial and coastwise duties and a complete checking of present abuses—must be secured. At a time when Japanese trade, in spite of a heavy Protectionist tariff, has risen to nearly two thousand million gold dollars a year, or more than thirty gold dollars per head of population, it is monstrous that Chinese trade should amount
TRUTH ABOUT CHINA AND JAPAN
to little more than three dollars gold per head of population. That the Japanese people on a per capita basis should have a commerce a thousand per cent. larger than the commerce of the Chinese people—born traders, be it remembered—proves conclusively that the whole Chinese fiscal system is radically wrong; and as the commercial nations hold China in thraldom with their commercial treaties, it is they who must make the first move to liberate the purchasing-power of the Chinese people. Statisticians are agreed that a legitimate basis of calculation is to assume that China could immediately do a trade per head of population amounting to half the amount of the Japanese trade per person, if all obstructions were cleared away. On this assumption, a China liberated from provincialism and militarism should have an annual turn-over of six billion gold dollars, (1,200 millions sterling,) an amount which would place her in the front rank of trading nations, and (assuming that imports and exports roughly balanced and that the twelve and one-half per cent. Mackay Import Tariff was the average levy) would give her an annual revenue of 375 million gold dollars from import duties alone. This sum would provide interest and sinking-fund on four times
SETTLEMENT OF THE QUESTION

the present amount of the national indebtedness, adding in every loan made for no matter what purpose during the past thirty years, and including all the reckless borrowing of the past quinquennium.

If and when this matter of Chinese trade comes up for consideration, another matter which is closely allied to it should not be forgotten.

This is the question of extraterritoriality.

To most people who have lived under their own laws and accepted such a condition as natural all the world over, the idea of extraterritoriality—that is, that in a given territory you are not liable to the jurisdiction of the local authority, but come under jurisdiction exercised by officers of your own country—must be surprising.

The origin of extraterritoriality is to be sought on the shores of the Mediterranean, where in the period of transition from the age of Rome’s universal empire to that of independent territorial sovereignties, it was held necessary by the maritime cities and republics to appoint officers to take charge of the depositaries of merchandise and exercise jurisdiction over their citizens. This practice, which was well-established by the eleventh century, received
a great impetus when the Near East fell under the domination of the Mahommedans. The Christian nations, who then entered into relations with the Turkish authority, were careful in their treaties to provide for the establishment of consulates; and the administration of the law of the nation represented was admitted to form an essential part of the consular functions.

It was on this Turkish precedent, then, that practice in the Far East was based. In the first commercial treaty ever entered into between China and a Western Power—the British Treaty of Nanking of 1842—the word extraterritoriality, however, does not occur and no provision was made for the exercise of jurisdiction by consular officers. In a supplementary treaty for the regulation of trade signed the following year extraterritoriality, however, begins to take shape. It was agreed, for instance, that British merchants and others residing at, or resorting to, the Five Ports opened to trade “shall not go into the surrounding country beyond certain short distances to be named by the local authorities in concert with the British consul and on no pretence for purpose of traffic”; whilst as for seamen and persons belonging to the ships they shall only be allowed
to land under special rules. Another clause in the same treaty provides that at each of the five ports opened to trade "one English cruiser will be stationed to enforce good order and discipline amongst the crews of merchant-ship- ping and to support the necessary authority of the consul over British subjects".

Here extraterritorial jurisdiction emerges, not as it has developed, but as then seemed neces- sary. It was a police-authority over unruly persons of alien race who had forced their way into Chinese anchorages and were so deter- mined to trade that the right to do so had been granted them by the Emperor. All the rough- and-tumble history of the Canton delta during the generation preceding these formal treaties looms up from these clauses; drunken English seamen rowing off from their sailing-ships and indulging in riotous conduct; opium-dealers slipping away in fast boats to hidden creeks where their traffic could be carried on con- cealed; the Chinese authority, unable to cope with these heavy-fisted men, and only occasion- ally, when murder or manslaughter was in- volved, getting hold of the culprit, who was strangled in accordance with the lex loci.

Nearly twenty years pass with practice in this inchoate state, the more precise American
TRUTH ABOUT CHINA AND JAPAN

Treaty of 1844 being generally used as a guide to consular authority. But in the Treaty of Tientsin of 1858—which was not ratified until Peking had been captured in 1860 and the Son of Heaven had sought safety in flight—Article XVI lays down specifically and absolutely that British subjects guilty of crimes "shall be tried and punished according to the Laws of Great Britain"; and similar clauses being almost immediately inserted in all the treaties with the Powers, extraterritoriality was fully enthroned.

That was exactly sixty years ago, and in sixty years there has been no change save to scatter extraterritorialized persons by the thousand over the length and breadth of the land, often without any consular authority within a week's journey. For the right of residence in the interior, which all missionaries possess by virtue of the French Treaty of Tientsin, and the most-favoured nation clause which is found in all similar instruments, having long ago been annexed not only by countless Japanese but by many other foreigners as well, an entirely new situation exists which urgently calls for reform. Since the Revolution of 1911 and the proclamation of the Republic, China has indeed tacitly accepted this condition of affairs only because she believes that when her case is
SETTLEMENT OF THE QUESTION

properly presented no reasonable person will deny that she is entitled to justice.

That is why Young China demands the summary abolition of extritoriality, and cries aloud that inasmuch as in the inoperative Shanghai treaties of sixteen years ago it was specifically stated that so soon as a reform of the judicial system was accomplished this foreign jurisdiction would be relinquished, the hour has come for the pledge to be redeemed. For a new code has been adopted under the Republic and a new system of courts; and although there is more theory than practice, the independence of the judiciary forms an integral part of the draft Constitution.

Now, as no questions are so thorny as questions of law and jurisdiction, it is obvious that if this one matter is to be handled successfully it will require a special conference of all the Treaty Powers. The vast and complicated interests which have grown up in China since the Boxer period necessitate a special practice being grafted on to the Chinese administration step by step, rather than any dramatic relinquishment of old rights. It is not possible to refuse to deal with this matter, any more than it is not possible to refuse to deal with the railway question. For since her declaration of
TRUTH ABOUT CHINA AND JAPAN

war against Germany and Austria, China has had charge of all persons of German and Austrian nationality, in spite of the efforts of the Dutch diplomatic and consular representatives (temporarily in charge of German and Austrian interests) to assume jurisdiction. A number of important Germans and Austrians are at the moment of writing held interned by China in special camps; and that China in the treaties of peace with the enemy Powers will insist on retaining at least police jurisdiction over citizens of these nations is quite certain. The Chinese police-system has made such advances during the past decennium that there can be little doubt that so long as appellate courts, with foreign assessors, are provided for, it should be possible to erect a system which will be a half-way house to the total abolition of extritoriality.

The precise methods are already matters of dispute and can certainly not be settled in any casual manner. Some have proposed that there shall be a probationary ten-year period during which China shall be given a trial. Others have declared that the only method is an extension of the mixed court system, although this system in Shanghai is a lamentable failure. Yet another class declare that no modification is pos-
SETTLEMENT OF THE QUESTION

sible until conditions throughout the land have been entirely revolutionized. But it is obvious that the complete throwing-open of China, with the universal right of trade and residence freely conceded, cannot be satisfactorily arranged if a favoured class is removed from police control—particularly such men as Japanese peddlers, who in hundreds and thousands roam the land retailing great and increasing quantities of morphia and opium in defiance of the law of the land.

Tariff and judicial autonomy go hand in hand; they are the necessary prerogatives of the sovereign State. Until this dual problem is settled in accordance with ordinary world-practice China will be an international cripple.

In this discussion we have travelled the whole road which it is possible to travel in one stage. To proceed further, would entangle issues in the minds of even those who are anxious to understand. Chinese currency; the Chinese debt; the Chinese civil and military administration; and the question of parliamentary government, are best considered separately as the Problem of Peking. They belong to a different category from the semi-foreign issues which we have just discussed, because they are of a different ancestry.

101
TRUTH ABOUT CHINA AND JAPAN

For the moment what should be seized upon as the kernel of the imbroglio is that it is necessary to hark back to 1895 and the Korean war, and deal with the four big questions of leased territories and spheres of influence; railways; tariff reform; and judicial reform, from the point of view that Russian imperialism having been perpetually eliminated from Eastern Asia, the maritime nations can push off from the land and settle the issue on the basis of sea-power; since it has been Russian action—and not German, as in Europe—which has been the terror and the threat, and to which must be primarily traced present Japanese continentalism.
IV

THE PROBLEM OF PEKING

The writer has established, it is to be hoped clearly, the outline of his argument regarding the solution of the imbroglio in the Far East. Taking as his starting-point the practical results flowing from the Chinese collapse in the Korean war of 1894, and the present state of China’s international commitments, he found that an indispensable element was wholesale treaty reform—not only as a matter of right but as a matter of expediency. He showed how it must be worked out, what were the real difficulties, and who really stood to lose by such radical adjustments. And yet it must be confessed that even if the relations between China and the West are so fundamentally recast as to revolutionize the old conditions, there will still remain the far more thorny matter of erecting in Peking a really competent government, able and willing to govern by constitutional means, and reasonably stable.

The problem of Peking is so peculiar that no
TRUTH ABOUT CHINA AND JAPAN

parallel case exists in any other part of the world. Turkey is sometimes quoted as a similar instance—but the differences between China and Turkey are greater than the points of resemblance. Turkey comprises a mixture of races; the Chinese are absolutely homogeneous. The rule of the Ottoman Turks was based on military conquest; the Manchus, who were their prototypes, were summarily ousted seven years ago and for many a day prior to their actual collapse had not much more power than the errant descendants of Genghiz Khan. Then Turkey is so close to Europe that her problem in an European issue: China is so far distant that she is remote even to India. Turkey pretended to reform, and then surrendered to the Young Turks, who were virtually Young Germans. The Tu-chün, or military governors in China and their henchmen, may perhaps be held the equivalent of this truculent breed; yet even these semi-ignorant leaders pay homage to the literary traditions of the race, worship formality, and declare that they represent a transitional stage which will soon give way to a new brotherhood.

For the time being, however, what we have to-day, particularly in Peking, pending the settlement, is rule by velleities—i.e. by volition.
THE PROBLEM OF PEKING

in its lowest form, which only takes on a positive character when a direct assault is made on the lares and penates of the office-holders. In the past it has been clearly shown how every time the defenders of the Republic have attempted to adopt definite formulæ in place of this obscurantism, they have been beaten into retirement in the provinces because they have lacked the necessary force to win. With this inchoate condition in the capital and with the chief cities held by military rule, watchful drifting has become the slogan. And although all Chinese know perfectly well that without organization, and without the supremacy of the civil authority, it is vain to hope for national solidarity or greatness, no single man has yet been able to effect any lasting improvement. Thus although the empire has gone never to return, and although a definite and recognizable advance in ideas is generally admitted to have occurred throughout China, obscure causes which must be referred back to climate and soil, and to the city-type, which a hundred city-bred generations have evolved, tends to perpetuate this political palsy and to make many foreign critics declare there is actual chaos and retrogression. That behind all this—deep-buried in the twilight of a myriad homes—the supreme
TRUTH ABOUT CHINA AND JAPAN

explanation is to be sought in the very mild impulses of the race, which are expressed in the quietist doctrines animating Chinese society, is the writer’s profound conviction. And so does it happen that the Chinese people have come to think that they have been caught in the Caudine Forks, and that it is the Japanese who are striving mightily to play the part of the Samnites and make them pass under the yoke.

II

What are the vital difficulties at the present moment in the way of civil authority being so constituted as to be effective?

First, and greatest of all, there is the question of Parliament and the rôle it should play in the life of the State. Round this question a fierce struggle has raged from the very inception of the Republic, because the abdication of the Manchus was only secured by a compromise so framed that Conservatives and Radicals could interpret that dramatic act much as they pleased. According to Article 53 of the Nan-king provisional Constitution, promulgated in January, 1912, and accepted as the law of the land, within ten months of that date a National Assembly was to be convened, to frame the permanent Constitution and to be the articulate
THE PROBLEM OF PEKING

voice of the nation. The first full Parliament should therefore have assembled in Peking by October, 1912; it did not meet until April, 1913, owing to deliberate obstruction in the elections practised by Yuan Shih-kai—the last act of which was the assassination of the Southern leader Sung Chiao-jen. This Parliament was not yet fully organized when Yuan Shih-kai, alleging that the National Council (sitting prior to the convocation of Parliament) had given him power to do so, forced through the great Reorganization Loan over Parliament’s head, denying that it had the right to scrutinize this important measure and being supported in his unconstitutional and reactionary policy by five Powers—England, France, Germany, Russia, and Japan. Native arms and foreign diplomacy thus formed as unholy alliance in China in 1913 as in Vienna Congress days in Europe in 1815.

This first great assault on the Republic was followed by a six-month period of intimidation and bribery, after which Yuan Shih-kai finally secured the passage of the Presidential Election Law and was elected full president for the first five-year term. Thereupon, having a complete legal title, he carried out his coup d’état of the 4th November, 1913, and unseated all Southern members of Parliament, following this by de-
TRUTH ABOUT CHINA AND JAPAN

stroying by means of bogus enactments the legal framework on which international recognition of the Republic had been accorded; finally capping it all two years later by an elaborate ballot-fraud whereby he declared himself elected Emperor of the Chinese à la Napoleon and head of a so-called Constitutional Monarchy. That comprises the complete story of the first four years of the rule of Peking over the provinces under the Republic and shows what a hollow mockery it was.

With Yuan Shih-kai’s death in June, 1916, the 1913 Parliament returned to the capital—weakened but still determined to consummate its main work, which was the formal passage of a permanent Constitution, the draft of which had been so long complete. In spite of every kind of opposition, such progress was made that in less than a year, with the exception of the seven clauses which follow, the two Houses had passed the completed instrument through its second reading, and would have entirely terminated the work had there not been deliberate military obstruction. The seven disputed clauses were:—

Article 32. The ordinary sessions of the national Assembly shall begin on the 1st August of each year.
THE PROBLEM OF PEKING

Article 35. Both Houses shall meet in joint session at the opening and closing of the National Assembly. If one House suspends its session, the other House shall do likewise during the same period. When the House of Representatives is dissolved, the Senate shall adjourn during the same period.

Article 75. With the concurrence of two-thirds or more of the members of the Senate present, the President may dissolve the House of Representatives, but there must not be a second dissolution during the period of the same session.

When the House of Representatives is dissolved by the President another election shall take place immediately and the convocation of the House at a fixed date within five months should be effected to continue the session.

Article 82. When a vote of want of confidence in the Cabinet Ministers is passed, if the President does not dissolve the House of Representatives according to the provisions made in Article 75, he should remove the Cabinet Ministers.

Article 92. Should the President disapprove of any bill of law passed by the National Assembly he shall, within the period allowed for promulgation, state the reason of his disapproval and request the reconsideration of the same by the National Assembly. If a bill has not been submitted with a request for reconsideration and the period of promulgation has passed, it shall become law. But the above shall not apply to the case when the session of the National Assembly
is adjourned or the House of Representatives dissolved before the period for the promulgation is ended.

Article 107. The method of organization of the Auditing Department and the qualifications of auditors shall be fixed by law. During his term of office the auditor shall not be dismissed or transferred to any other duty or his salary reduced except in accordance with the law. The manner of punishment of auditors shall be fixed by law.

Article 108. The Chief of the Auditing Department shall be elected by the Senate. The Chief of the Auditing Department may attend sittings of both Houses and report on the audit with explanatory statements.

Now even to those who are not over-familiar with constitutional enactments the aim and purpose of these Articles should be tolerably clear: they were drafted to secure the real independence and supremacy of the National Assembly and to serve as checks against abuses which experience had shown were the chief dangers.

Article 32 had a certain technical importance owing to the 1918 Presidential election, which has now taken place. Articles 35 and 75, placing the Senate in a very strong constitutional position vis-à-vis the Chief Executive, and restricting his power over the Lower House, were
THE PROBLEM OF PEKING

looked upon by the militarist party as their death-warrant; whilst Article 82, which strictly defines the President’s action when a vote of want of confidence in the Cabinet Ministers is passed, contains the very essence of the whole constitutional fight. Article 92 dealing with the President’s suspensive veto has been looked upon as hardly less important: and the two concluding Articles, in which Audit is so strictly defined and the control over the National Purse retained by this method after supplies have been actually voted—has been one of the bitterest subjects of dispute. Finally, just before the rupture, a proposal to tack on to the Constitution an additional chapter on local government, dealing with the governing of the provinces, had taken such concrete form that a complete draft had been made; and as in this draft the powers given to Provincial Assemblies were very large, the sweeping-away of the Tu-chün system was imminent.

In June, 1917, although the question of an immediate declaration of war against Germany and Austria was the technical reason, this parliamentary question brought the expected crisis. For the second time in the brief life of the Republic the party with whom power really rested—the military element—saw its existence
openly menaced. Accordingly, after a long and bitter struggle behind the scenes, President Li Yuan-hung was finally intimidated into promulgating a Mandate of Dissolution, although he had no constitutional right to do so; and as the capital was already under the control of the military, Parliament was forced to scatter.

No doubt it was the fact that the immediate sequel to this dissolution was a burlesque restoration of the Manchus, lasting eleven days, which confused the Northern military party. Had they been well-advised, they would have hastened the summoning of a new Parliament on the valid election law of 1913 and sought a compromise on the seven Articles. But finding the field absolutely free—after they had thrown down the Manchus again—and being fearful of the future, they summoned a packed and illegal National Council, under the so-called authority of the provisional Constitution; instructed this body to alter the election law, and then held a general election which sent to Peking two greatly-reduced, packed Houses in time to carry out the quinquennial Presidential election. Their official candidate, curiously enough, was probably the best man in China, Hsü Shib-chang, a former viceroy, who by training and natural inclination is sufficiently broad-minded.
THE PROBLEM OF PEKING

to settle the problem—if supported. Elected six months ago his tenure of office has already brought improvement; and now that an actual peace conference has assembled in Shanghai to settle the dispute between North and South, hopes are reviving that the common sense of the Chinese race will win a lasting victory.

For fifteen months, however, desultory civil war between North and South has destroyed the fertile regions of Hunan, Szechuan, and Shensi provinces; and until the Allies, after much pressure, sent in Joint Notes on the necessity of instant internal peace, there were no signs that the two great divisions in the country could do more than continue their watchful drifting and thereby intensify the turmoil.

III

Now it must be plain from this account that something has been radically wrong with foreign diplomacy as well as with Chinese hearts for such a record to stand to the discredit of Peking. The type of diplomatic agent the several Allied governments have maintained in the Chinese capital during the Republican period has not been the type which the conditions emphatically call for. With the
TRUTH ABOUT CHINA AND JAPAN

exception of the United States, which are represented by a professor of political and economic science, all the Allied representatives since the inception of the Republic have been men lamentably untrained in the part played in the governing of their own countries by their own Legislatures. Had this not been so, no such stupidity would have been shown as in 1913, when with a golden opportunity to enforce constitutionalism on the leader of the militarists—Yuan Shih-kai—by demanding Parliamentary ratification of a prime financial measure, and thus securing once and for all that financial centralization in China was based on legislative acts, foreign ministers deliberately assisted the Dictator to make a coup d'etat by means of foreign money—and thus gave the quarrel a vicious international character. The day has surely passed when such things can be tolerated; but until England, France, Italy, Russia, and Japan publicly repent, and send as envoys to the Chinese capital men specially selected by virtue of a long parliamentary experience in their own countries—plenipotentiaries who thoroughly understand the necessity of the supremacy of the Legislature even in China—there will be no great improvement in the methods of government in Peking. For China
THE PROBLEM OF PEKING

to-day leans absolutely and entirely on the West —no matter what else may be pretended; and instead of rebuffing the widespread desire to benefit by the superior political knowledge of Europe and America, that desire should be stimulated in every possible way and the fact made perfectly clear by the acts of the accredited foreign representatives that a strong government, based on constitutionalism, is their one and only concern.

This viewpoint is fortified when we consider the actual nature of the contact between the foreign legations and the metropolitan government. That contact is not diplomatic in the ordinary sense of the word: rather is it financial and economic, having come by direct descent from the time when the first foreign representatives in the Canton factory days were Superintendents of Trade. The foreign ministers are therefore principally concerned with questions arising out of loan contracts; with questions concerning the periodic release of surpluses of the Customs and Salt collections which have been almost entirely hypothecated abroad; with disputes arising from the interpretation of treaties and covenants governing commerce and residence and land-ownership—in a word, with all the disjecta membra of a
mercantile imperialism. And because of this peculiar heredity—with ninety years of strife and gunboat methods behind it—Peking diplomacy, encased since 1900 in a fortified diplomatic quarter, has developed a peculiar mentality among those who interpret it, making them small, irritable, and meticulous when imagination and common-sense and personal acquaintance with the liberating world-movement of the day are emphatically required.¹ No better illustration of this could be given than to recall that when a decade ago China ordered the reform of the archaic system under which the Maritime Customs was controlled from the Chinese Foreign Office, Great Britain instead of agreeing on the necessity, and simply

¹ No better illustration of the extraordinary nature of Peking diplomacy could be given than to cite the case of the Russian Legation.

This Legation, with its consulates, being deprived of all funds by the Bolshevist capture of the Petrograd administration, entered into negotiations with the Peking Government to continue the payment to it of three-fourths of the Boxer indemnity—that is, $1,800,000 a year—after the other Allies had agreed to suspend provisionally for five years their quotas as a result of the Chinese declaration of war against Germany and Austria.

China consented.

The result to-day is that a Minister Plenipotentiary, who represents no government, and who is paid by the government to which he is accredited, can stop diplomatic sanction to financial measures to which China requires the unanimous consent of the Treaty Powers by saying he has no instructions! There has never been a more Gilbertian situation in the history of diplomacy since the days of the Bourbons.
stipulating that the controlling agency should be as in other countries the Treasury or Ministry of Finance, raised a terrible outcry against anything being done at all and then let the matter drop—with the result that to-day the Maritime Customs control, which might have been rightly placed, is under separate little government offices hidden away in an obscure lane.¹

These matters—and what they directly signify—are of the highest importance. For the two ministries on which China’s future largely depends, because they are the interpreters of the civilization and organization which the breakdown of the Confucian state-system has brought into the country, are simply the Ministry of Finance and the Ministry of Communications. Virtually all the politico-financial business arising out of foreign intercourse is in their hands; and only indirectly in the hands of the Chinese Foreign Office. Long ago it should have been the aim of all the liberal Powers to place under the roofs of these two

¹ A very valuable government return for the year ending on the 30th June, 1919, will be found Appendix M, giving precise figures regarding the Public Debt and the National Expenditure. The most cursory study will convince readers that the Chinese fiscal problem is easy of solution on account of the lightness of the debt and the cheapness of the administration in comparison with what exists elsewhere.
Boards—fully centralized and fully defined—all matters which are justly the objects of their official concern. Publication of facts and figures should have been substituted for haggling about details—not hypothecation or alien control, but organization should have been the goal. The Ministry of Finance, with its many foreign Bond Issues, should not only have direct and absolute control over the four great sources of revenue, Customs, Salt, Land-tax, and Wine and Tobacco, but should have been stimulated into issuing proper quarterly statements in Chinese and English, thus bringing light into dark places. There should not have been a constant policy of frightening the Chinese with visions of a Foreign Debt Bureau under foreign control on the Egyptian-Turkish model. A real Chinese service of the national debt, in place of the present semi-foreign pawnbroking methods; a proper currency system, with token coins and bank-notes maintained at parity—these things would be far more beneficial to the world at large than spheres of influence, or personal victories signalized by the appointment of favoured nationals to sinecures. At present all these questions are inextricably and hopelessly confused; but inasmuch as the provisional suspension of the Boxer indemnities
THE PROBLEM OF PEKING

(since China's declaration of war against Germany and Austria) will afford an opportunity in the near future for a wholesale review of the financial problem, this view of reform—namely, one policy under one roof—must be vindicated.

For depending directly on revenue-control and currency is the whole question of the credit of the Chinese people, which is to-day in as sorry a position as all the rest. China has virtually accepted as her money standard the silver dollar of the same weight and fineness as the Mexican dollar and the people are becoming accustomed to it. About 200 million of these units have been actually coined by the Chinese mints, not to speak of the hundreds of millions imported in the past from Mexico, and melted in part into sycee. But this currency is officially still only a shopping currency; the money of account is still the tael, which pass from one emporium to another and finally into the creditor-banks in standardized lumps of bullion which vary according to locality. And as the silver dollars are often melted down as fast as they are coined, and as the importation of the white metal has been restricted for several years, we have the crowning anomaly to-day of the chief state bank—the Bank of China—unable to-day to meet its note issue in the capital.
and with its notes at 50 per cent. discount; whilst its branches at the commercial ports manage to maintain their issues at parity because their balances are daily replenished by trade operations, and are not periodically raided by the army-leaders.

From the international point of view this matter of the currency, and the whole loan policy of the Powers, is indeed in as pretty a diplomatic tangle as a Talleyrand could desire. Eight years ago, on American initiative, a currency loan of 50 million gold dollars was signed; but the Revolution of 1911 prevented either the loan being floated or any true re-organization being attempted. Four Powers participated in this loan, England, America, France, and Germany, this official group being later expanded by the admission of Russia and Japan, who had protested that they were being discriminated against by being excluded. Meanwhile in 1913 America dropped out of participation in Chinese finance because of President Wilson's well-known declaration that the conditions of the foreign loans seemed to touch very nearly the administrative independence of China; transactions of this character being obnoxious to the principles upon which the American Government rested. This reduced
THE PROBLEM OF PEKING

the number of participating countries to five. Since the world-war Germany has, of course, had her partnership in the official consortium cancelled; and the bankruptcy of Russia likewise precludes her from being a sponsor of any Chinese loan.

But this last remark brings up an essential point. These semi-official loans to China, although nominally made by a four-Power group, (which became a six-Power group and finally a five-Power group,) are simply in the hands of certain favoured banks supported by their Legations. In the case of Russia, the Russo-Asiatic Bank is the sole participant; and as this institution is largely owned by French interests, so far from Russia dropping out of Chinese loans, in spite of the fact that it may be a quarter-of-a-century before financial stability has returned to the Bolshevik-ridden country, the French interests concerned are determined that Russia, in the person of a single bank, shall remain a nominal participant, as rich profits accrue from the handling of Chinese issues.

The following should make this clear. The loans, being gold-loans, are paid over to China in silver-credits at exchange-rates which are 'worked' by the banks in an admittedly
scandalous manner. Thus, in the case of the £25,000,000 sterling Reorganization Loan of 1913, it was discovered by chance that the instalments paid over in Peking were placed to China’s credit at a profit of 3 per cent. to the participant banks over and above legitimate commission and over and above the true market-rates. Similarly, by various intricate juggling methods, nominally made in the interests of the foreign bondholders, instalments for the service of foreign loans must be paid monthly into the foreign issuing banks, who allow the Chinese Government 2 per cent. annual interest, and thus make privately at least 5 per cent. per annum from the use of the Chinese Government’s moneys. Furthermore other abuses have grown up. Thus in 1915, nominally to safeguard the interest of the bondholders and in defiance of the particular loan agreement involved, the foreign banks stopped payment to China of ten million dollars of salt surplus, and for four years have held this amount in their coffers as a ‘reserve’ to pay Chinese coupons, allowing China 2 per cent. per annum on this amount and making at least 5 per cent. net profit per annum on the transaction. The issuing banks have therefore been placed by their governments in the illegal and
immoral position of being able to utilize China's financial resources in their own interests under the plea that they are safeguarding the interests of the bondholders: that this abuse, which has largely arisen because of the presence in Peking of foreign diplomatic representatives who know little or nothing of business or the money-market, must be terminated at an early date cannot be refuted.

Three steps, which will be bitterly opposed by the foreign banks, should be taken if the problem of Peking is to be solved. First, the next loan should be made to China precisely in the manner that the United States has made loans to the Allies during the war—namely, the participating states should directly make the necessary advances, or at least directly control them. Secondly, the advances should come to China in actual silver, to be delivered in monthly instalments spread over a long period of five or ten years, and turned immediately into dollar currency which it shall be made a penal offence to melt down, or 'chop', or remove from circulation. Thirdly, what was once done in 1856 to remedy the conflict between currencies must be repeated. Then, the Spanish Carolus dollar being insufficient for trade requirements, and the Mexican dollar not being
TRUTH ABOUT CHINA AND JAPAN

accepted in its stead, on a given day all accounts throughout China were transferred into taels, which were made the basis for all trade and for all public and private payments. What is now required is that on a given day, say in 1920 or 1921, all accounts in China from one end of the country to the other without exception, private as well as governmental, after a proper six-months notice, be transferred at fixed rates into Chinese Republican dollars, no other currency being legal tender or permitted even as a money of account, and punishment for infringement being rigidly carried out.

To enforce such a vast programme will necessitate foreign state help in the form of the loan of Treasury officials from the four countries who are alone in an independent financial position to-day, namely the United States, Great Britain, France, and Japan. China would receive Treasury officials of standing in a very different way from the appointees of commercial banks, or of the Legation junta. That such a step will finally become imperative is certain from the fact that it is through the medium of the Bank of China—which should be made the sole Bank of Issue in the country—that a standard currency in notes and in token coins can alone be secured. The Bank of China not only
THE PROBLEM OF PEKING

requires reform, but a great addition of capital and the opening of five hundred new provincial offices; no such expansion can take place without expert help and the loan of a large amount of foreign capital under the direct control of the participating foreign states. The most bitter opponents of such a reform will be the privileged foreign banks which will be forced to relinquish their octopus grip on the Chinese giant—a grip which directly contributes to the present palsy in Peking. That in all these circumstances, with the prospect of the action we have outlined looming near, the pro-Japanese party in Peking (and it should be thoroughly understood that the pro-Japanese party is today very powerful) should have attempted just before the close of the European war to push through a so-called gold-note scheme, a project rotten to the core, but designed ultimately to make the Japanese yen the unit throughout China, is very understandable; for in the present confusion anything is feasible. That this same pro-Japanese party should also have attempted to secure the appointment of a Japanese Treasury official, Baron Sakatani, as sole controller of Chinese currency, is further proof that immediate action is necessary on the part of the interested states.

125
TRUTH ABOUT CHINA AND JAPAN

IV

We have mentioned not only the Ministry of Finance but the Ministry of Communications. In China it may be truly said that evil communications corrupt good manners. The extraordinary nature of the railway tangle to-day is due both to the false principles on which the development of Chinese railways has been conducted in the past, and to the present bankruptcy and lack of authority of the Central Government, which is forced to pawn every liquid asset—particularly its communications—to obtain hard cash; and is likewise compelled to allow the military almost a free hand in commandeering rolling-stock and riding roughshod over its behests.

We have already sufficiently insisted upon the nationalization of Chinese railways—that is, on the necessity of all railways being unified in a common system, and so-called railways concessions being pooled as soon as they have been built. In the past the method pursued by foreign interests has been as follows. After a bitter struggle in the dark, with every rival Legation working through every possible agency to prevent consummation, a railway concession (i.e. a building concession) is granted.
THE PROBLEM OF PEKING

to a single concessionaire or to a group of concessionaires, which provides for the issue of a gold loan on the security of the given line; the amortization of that loan after a certain period; and the appointment of a chief engineer and a chief accountant of the concessionaire's nationality—the whole enterprise being nominally controlled by a Chinese director-general, together with a host of his relatives. The granting of this concession, however, is held to carry certain rights, irrespective of the real interests of the country; for instance, the concessionaire considers it necessary to stop the building of any line in his vicinity, particularly parallel lines, and sometimes feeder lines if contracted for by other parties. Moreover, the sphere of influence is still such a cherished doctrine among the diplomatic fraternity, that the invasion of a given sphere by a contractor of rival nationality is one of the most dangerous crimes, providing a local *casus belli* which is fought out bitterly in the *coulisses* of the various ministries and throughout the Far Eastern press, Asia Minor could hardly provide a more brilliantly tinted map than the present railway map of China when it is coloured according to the nationality of each concessionaire group. There is consequently
TRUTH ABOUT CHINA AND JAPAN

no unity in Chinese railways, neither in administration or in finance; they are run on the most unbusinesslike and wasteful principles; and whilst nominally the Ministry of Communications is in supreme command, in practice a centralized government control, of the type which the war has made a commonplace, is still unthought of and unrealizable.

It is this centralized control which must be brought to China—with every railway on Chinese soil directly controlled from Peking. The fact that existing lines are already large dividend-earners should simplify the solution of the problem—which as in the case of currency should be worked out by government experts dispatched to China by the interested states, who will not be in any way influenced by the old-fashioned mercantile imperialism.

China requires such a reform for internal political reasons as well as for external. For, as in the case of every other modern convenience, provincial control cannot be properly centralized unless the abuses which are rapidly becoming stereotyped are absolutely checked. At the present moment the military element tend more and more to monopolize the railways; to act generally with such a high hand that the earning-power and safety of existing lines is
THE PROBLEM OF PEKING

being gravely compromised; and to spread the idea that a bully’s rule is the only one the country is fit for. It is by means of their local railway control, just as much as by soldiery, that the military governors maintain themselves.

Now, inasmuch as it is certain that the payment of the Boxer indemnities will never be resumed (since the Allies could not easily consent to such a crime), but will be diverted to some good cause such as education, the urgent matter of a system of national, hard-surface highways should not be lost sight of. Republican China has inherited from the Manchus a great system of Imperial highways, useless for modern purposes since they are unmetalled, but covering a great portion of the land and capable of knitting the country very closely together, besides vastly increasing the prestige of Peking. The allocation of at least one-quarter of the Boxer indemnities to national road-building would in a decade work miracles of education among the people and strengthen the voice of authority. With credit and currency restored, and with a network of railways and roads covering the twenty-two provinces, republican China might soon become as important a factor in world-commerce and world-industry as
TRUTH ABOUT CHINA AND JAPAN

the United States, since the supply of men and women is virtually endless, and is now increasing at the rate of six or seven million persons a year. Only by liberating the natural money-making genius of the Chinese people by giving them reasonable economic guarantees, can Western civilization justify its invasion of Cathay, and its remorseless destruction of the old gods.

There remains one question, and one only, to discuss, and we have done.

This is the policing of the country.

The Chinese army, as has been clearly shown, has degenerated into a political police. To transfer it back to its proper sphere, and to reduce its numbers, is the work of education and sympathy as well as of political compromise. For it must be remembered that what the provincial generals have been doing in regard to the provincial capitals, and along the connecting railways, has been largely taught them by what they see in the metropolis and along the railway leading from the sea to Peking. Foreign garrisons, placed in the capital and at each strategic point in the metropolitan province, under the Boxer protocol have for nineteen
years accustomed men to the belief that soldiers are an essential part of politics—national as well as international—and that it is only the man with the rifle who is the man with a policy. In the opinion of the writer justice as well as expediency requires a relaxation of the safeguards established as a result of the now forgotten siege of the Legations. The few thousand foreign troops in North China no longer mean what they once did; the Chinese army is to-day far too powerful in artillery to be overawed by what was once an impressive force. To protract what is a daily source of irritation is a senseless policy: no statesman can endorse it.

A foreign evacuation protocol is therefore just as essential as an evacuation by Chinese generals of the provincial capitals: the two things should go hand in hand.

Already there is an efficient gendarmerie in Peking, perfectly trustworthy and perfectly able to do its duty if police and politics are separated. The Peking police-schools are gradually transferring more and more men to various parts of the country; and that recruits are excellent and well-trained is shown by the fact that the foreign municipality of Shanghai is requisitioning them and finding them supe-
TRUTH ABOUT CHINA AND JAPAN

rior to Japanese constables. A sufficient num-
ber is all that is required—half a million for
the whole country would guarantee peace and
security and largely banish the present unrest.

If we are to ensure a happy morrow for the
Chinese, all the things which we have touched
upon must be considered as one organic whole
—to be handled with the idealism and the prac-
tical common-sense which have given the name
of Woodrow Wilson such prestige and puis-
sance. In a word, the problem of Peking should
be made the problem of Europe and America,
it should be treated as an intimate and not as
an insoluble matter, since it has directly grown
out of the superior strength in peace and war
of the Western man and urgently demands not
his enmity but his sympathy and help.
V

IF JAPAN REFUSES?

We have reached the last phase—the question of Japan.

Until Japan defeated China in 1894, the condition of her armaments, her finance, and her industry was of a modest and even primitive nature. She had an army of a hundred thousand soldiers; a navy comprising a few protected cruisers; a silver currency mixed with the remains of an abortive National Bank system copied (on the late Prince Ito's recommendation) from America; and a foreign trade of a hundred million dollars a year. By her Treaty of Peace, however, she received forty million pounds in sterling; established a gold exchange standard, which was maintained by keeping in London her main stock of the yellow metal (a practice continued even to-day, which has a profound and little-understood effect on Far Eastern politics); and almost immediately recovered from Western nations her passionately contested tariff and the judicial autonomy
TRUTH ABOUT CHINA AND JAPAN
(the new treaties becoming operative in 1899).

It is from this date, then, that Japan definitely enters international politics; the rock on which she built was defeated China. Prior to that she had barely been more than a third-class Power, with little vision of greater days. Troubled by many internal problems, her efforts to cope with the reorganization of her finances had signally failed. It is true that the matter of her inconvertible paper money had been solved, and a Central Bank of Issue, modelled on the Belgian National Bank, established before Chinese wealth had been tapped. But without the stock of gold won by the Korean war it is difficult to believe that her exchange standard, which is the head and front of her banking and industrial system, could have been created. In this, as in other matters, Japan's prototype—absolutely and entirely—was Germany of the post 1870-71 period. Germany was her light and her guide—and almost every step that Prussia took after her defeat of France was sedulously copied.

Although she emerged from her Chinese war financially satisfied, Japan was in many ways greatly embittered. Her original Treaty of Peace, which had included the cession of the Liaotung peninsula, had been torn up by the
IF JAPAN REFUSES?

action of Russia, Germany, and France, who had interposed a blunt fiat backed by battleships; and she had been forced to return to China what she had already annexed. She was bitterly hurt by this—both on account of the international humiliation, and because her real motives had been misunderstood. She had believed that the only method of terminating Manchu intrigue in the Korean peninsula was completely to cut off all land-contact between the Courts of Peking and Seoul; the Liaotung was therefore desired not so much as a Japanese colony as a buffer-territory between two capitals united by historic ties, and by a thousand-mile Imperial highway along which Korea’s tribute missions had journeyed for so many centuries. Obsessed with this point of view, which was totally unrelated to world-politics, the shock to her pride was very great when she was peremptorily shown that the Yellow Sea was not a lake, but part of a general scheme of things which she must envisage as a whole with her eyes specially fixed on the heavy guns of the ships from the West.

The action of England had been different from the action of the three Continental Powers. England had declined to be associated with the intervention, although during
TRUTH ABOUT CHINA AND JAPAN

the period of the war she had frankly warned Japan off all China treaty ports, declaring that she would not tolerate interference with her trade. Nevertheless England was so friendly that it was largely due to her initiative that tariff and judicial subjection were so rapidly abolished, even America not caring to deal with the matter until Britain had spoken.

By 1895, therefore, Japan had certain very clear-cut ideas on international politics. She had been given practical proofs of hostility and of qualified friendship; and American silence during this critical period had told her that the United States as a world-Power was still more of a theory than a fact. Japan was still so weak that she did not dare to challenge what almost immediately took place in Korea because the buffer-territory idea had been destroyed; and the fearful assassination of the old Korean queen by Soshi and secret agents of the Japanese Legation showed how desperate the collapse of her plans had made her. Russian influence now not only took the place of Chinese influence in Korea, but by the railway plans the great Northern Power showed that her goal was the ice-free waters of the Yellow Sea, which she desired to dominate. The curious and perverse after-war diplomacy of Li Hung Chang,
IF JAPAN REFUSES?

which began with secret conversations at the Tsar’s coronation in Moscow in 1896 and finally culminated in acquiescence in the cool Slav seizure of Port Arthur, were daggers in the heart of Japan—which she was unable to ward off. But in 1900, on the occasion of the Boxer explosion, by winning the esteem of the world by the excellence of her expeditionary force, she prepared the ground for what subsequently happened. The Colossus of the North, after playing for more than half a century like a cat with a mouse with Chinese sovereignty, had become too bold. Casting off the fiction of friendly co-operation, which had been her insistent cry ever since Muravieff had first sailed down the Amur in the middle of the nineteenth century, Russia had invaded all Manchuria and established garrisons even to the mouth of the Yalu, her intrigues in Seoul to obtain the lease of a harbour at the toe of the Korean boot—Masampo for choice—being so insistent as to make the Mikado’s country seethe with rage.

In 1904 Japan hazarded the impossible. The splendid gesture which involved her in war with Russia was forced on her; it was in every sense a war which had to be fought if Japan were to retain her real independence. There is no question but that Russia directly and cate-
TRUTH ABOUT CHINA AND JAPAN

gorically refused all real accommodation; she bluffed and hoped against hope to the very end. Japan fought desperately and won a qualified victory which would have been much more justly settled had it not been for the impetuosity of the late President Roosevelt. The Treaty of Peace, which would have been signed in Peking and not at Portsmouth, had all the surrounding circumstances been properly understood, was an unfortunate instrument; like the Lansing-Ishii Notes, it was a monument of haste rather than of prescience. A wiser policy would have regarded the Scriptural invocation regarding peace-makers as politically unsuitable to the circumstances and left the protagonists strictly alone. Had that been done both would have come to their senses and all history might have been different in the West as in the East; for both were not more than four or five months off complete exhaustion. Empty ammunition-wagons, depleted battalions, and ominous murmurs from the civil population—these are the only things that bureaucratic governments really appreciate. Neither Russia nor Japan could have faced in 1905 another winter campaign.
We have said the Treaty of Peace should have been signed in Peking: had that been done it would not have been necessary to have had a double arrangement—one between Japan and Russia, followed by a separate ratification between China and Japan. Too little attention has been directed to the action Japan took in December, 1905, in the Chinese capital: all the essential business—the business really worth recording as a result of the territorial struggle, since it involved the lord of the soil—took place here. Briefly, it was in this month of December, 1905—fourteen years ago—that Japan first clearly showed open political immorality. From the practical point of view all that the Portsmouth Treaty had done, with the exception of recognizing the old Japanese claim to half of Saghalien—was to record an accomplished fact—namely, Russia's international humiliation because of the crass failure of her army and navy. The curious connection of China with the imbroglio, arising from the circumstance that the entire war had been waged on her soil, and was directly concerned with certain grants she had been induced to make in the matter of a harbour, two railways, and the Yalu forest-
concession—this curious connection was never rightfully considered, and China was treated as negligible. Manchuria being as Chinese as the metropolitan province of Chihli, a proper and decent neighbourly spirit, not to speak of expediency and foresight, should have prompted Japan to insist on the war settlement being a tripartite agreement to which three contracting parties—Russia, China, and Japan—put their signatures, thus doing away entirely with the past causes of friction. But this would have meant the banishment of obscurantism; and Japan abroad thrives on organized opposition to inquiry and reform as on nothing else. To put it squarely, Japan in 1905, had she been honest, should have demanded that the whole Manchurian railway enterprise be retroceded to China—the trans-Manchurian lines as well as the South Manchurian—and then converted into a standard-gauge railway, after a lapse of time just sufficient to allow Russia to build the Amur railway and link up her Far Eastern possessions on her own territory. Had Japan taken this one step she would have made China her ally for all time; trebled her influence in every part of her neighbour’s vast territories; and so handicapped Westernism that it is extremely
IF JAPAN REFUSES?

doubtful whether any further development of European or American influence or industrial enterprise would have been possible. There is also little doubt that in such circumstances the Manchu dynasty would never have fallen as it did in 1912, but would have been converted very peacefully into a constitutional monarchy. Humiliation in foreign affairs was the last straw to break the camel’s back; and in this humiliation Japan played the largest part. The short-sightedness of Japanese policy, therefore, has been the ally of republicanism in the Far East; the sponsor of Western influence; and the enemy of the peace and dignity of the Japanese Imperial House, which is to-day swaying ominously under the high winds of democratic revolt, and may yet encounter a terrible end.

III

The treaty which Japan signed with China December, 1905, actually consisted of the two following clauses only; that it should have been so brief shows the spirit in which Japan negotiated. The clauses read:

Article I

The Imperial Chinese Government consent to all the transfers and assignments made by Russia to
TRUTH ABOUT CHINA AND JAPAN

Japan by Articles V and VI of the Treaty of Peace above mentioned.

Article II

The Imperial Japanese Government engage that in regard to the leased territory, as well as in matters of railway construction and exploitation, they will as far as circumstances permit conform to the original agreements concluded between China and Russia. In case any question arises in the future on these subjects the Japanese Government will decide it in consultation with the Chinese Government.

Why this brevity? For very peculiar and indeed Machiavellian reasons.

No matter what the spirit of Tsarist Russia may have been in the long struggle to reach 'warm water', it is fact that every instrument the Northern Power wrote with the Peking Government from 1896 to her disastrous war with Japan at least carefully preserved the fiction that enterprises on Chinese soil were held in usufruct: Russia had the use and profit but not the property. This is of the highest importance. It was specifically provided, for instance, in the Port Arthur lease (Article VI), that "Port Arthur shall be a naval port for the sole use of Russian and Chinese men-of-war", i.e. it was an anchorage to which China had as
much right as Russia. When in 1905 this matter was brought up in the Sino-Japanese negotiations, the Japanese plenipotentiaries immediately took exception to the contention, and declared that it was on record that on the only occasion during the period of the Russian lease that two Chinese cruisers had attempted to dock, the Russians had denied the right and therefore the right had lapsed. China was in a position to prove from the logbooks of the two cruisers in question that the Russian harbour authorities had signalled on the occasion in question “docks occupied: no accommodation”, and the Japanese negotiators, finally convinced that the point was against them, acted in a manner which sheds an interesting light on their constant professions of friendship for “a kindred Asiatic race”. The naval authorities were at once given orders to strip the Port Arthur docks completely and entirely so that there should be no dockyard facilities left; and Port Arthur, which had sheltered a Russian fleet more formidable than the entire Japanese navy in 1904, was made a derelict and rated as a second-class naval station to keep the Chinese out and allow Japan gradually to assume the right of eminent domain. These are the things as they really occur in the Far
TRUTH ABOUT CHINA AND JAPAN

East,—these are the foreign policies of Japan unmasked.

In addition to the treaty we have quoted, Japan wrote with China in 1905 a long supplementary agreement—using this method because she instinctively follows tortuous ways, believing that this gives her an opportunity to defend herself against accusations of expropriation,—and against actions which would be beneath the dignity of the Imperial House, but which her commercial appetite forces her to take.

In the supplementary treaty, Japan solemnly declared (Article II) that "in view of the earnest desire expressed by the Imperial Chinese Government to have the Japanese and Russian troops and railway guards in Manchuria withdrawn as soon as possible, and in order to meet this desire, the Imperial Japanese Government, in the event of Russia agreeing to the withdrawal of her railway guards, or in case other proper measures are agreed to between China and Russia, consent to take similar steps accordingly". What has been the result of this undertaking? Japan has made secret agreement after secret agreement with Tsarist Russia—the last one in 1916 a few months before the Russian Revolution—to se-
cure at all costs that Russia should take no such action, her recent intrigues with General Horvath, the Tsarist agent who is still in control of the Chinese Eastern railway, being dictated with the same aim and object, namely, to prevent at all costs her "sister-nation", China, being repossessed of her sovereign rights. In the remaining articles of the supplementary treaty Japan annexes everything of value she can think of in Southern Manchuria, her policy being ruthless commercial and industrial exploitation where Russia was content merely to dominate. Friction between China and Japan has been ceaseless in Manchuria ever since, the smaller country never hesitating to use threats and pressure on the slightest provocation.

It was probably because of this trouble, and of the difficulty which she experienced in annexing Korea, that Japan determined in 1915 to settle the results of her present belligerency with Germany in a new way. In the matter of Korea, in spite of her successful war against Russia, she had been forced to enter into four successive conventions with the Seoul Government before the deed was completed; and during all this time the press and peoples of the Far East were in a state of uproar. There was first an agreement on 17th November, 1905,
TRUTH ABOUT CHINA AND JAPAN

which placed the control and direction of the foreign relations in her hands; another on 31st July, 1907, by which all administrative measures and all high official appointments were made subject to the approval of a Japanese Resident-General; still another on 12th July, 1909, whereby the administration of justice and prisons—the essential police-power—was given her; and a final one on 23d August, 1910, when Korea was publicly annexed to the Japanese Empire and the Emperor of Korea deprived of his rightful title. Consequently, by filing the Twenty-one Demands almost immediately after Tsingtao had been captured, when every indication from the European war-theatre pointed to a drawn war, and forcing through, by means of an ultimatum, all those clauses which did not directly conflict with the treaty rights of other Powers, Japan imagined she was safe, and would be able to do from her Shantung base—Kiaochow—all she had done in Manchuria acting from the Port Arthur territory.

The nature of the things Japan thinks she has won by means of this manœuvre can easily be described; and it should be carefully noted that in these matters, as in all other essential political business, the German standard has been the one scrupulously followed. Japan has
placed the Manchurian railways and the Port Arthur lease on ninety-nine-year Kiaochow terms—an action which is absolutely ultra vires; and moreover, she has not only taken over all the German enterprises in Shantung by force, but she has pushed through, by means of loans to the Peking military party, a railway extension scheme on a German-made plan, secretly prepared by Germany before the European war, aiming at making Tsingtao the sea-terminus for a railway system which at some distant date is to stretch through Central Asia and link-up with the Middle East.

The problem growing out of Manchuria and Shantung has therefore a new character. It is no longer a local Far Eastern problem: it is a world-problem which has to be faced and solved or else there will be fresh world-disaster.

IV

One final aspect has to be made clear.

Until the death of Yuan Shih-kai, Japan treated China as a country with a united government which could be held responsible and which must be treated with; after his death she deliberately abandoned this policy and dealt with specified persons as fully-authorized
agents whom she seduced to her point of view, and used as her instruments. No longer using the Chinese Foreign Office as her channel of communication, she boldly commenced making secret agreements with the Northern military party, and by means of her agents in the Ministries of Communications and Finance has been able under cover of the World War to do untold harm.¹ Adopting the simple principle that the ‘postponed’ Group V of the Twenty-one Demands was her principal business with the Republic, she has for three years sought to do piecemeal and secretly what she failed to do openly, i.e. to get into her hands, or into the hands of her agents, control of Chinese arms and munitions, control of strategic areas, control of important railways and control of industrial monopolies. How many secret agreements in all she has made no one accurately knows; but the Arms Agreements made during the past three years and the Sino-Japanese Military Agreement of 1918—nominally to deal with the Bolshevist threat on China’s Manchurian frontiers but really to bind Peking to her chariot-wheel—are notorious instruments, whilst the network of financial undertakings, made mainly

¹ The reader is referred to the remarkable list of loans and mortgages in the Appendix, Document C.

148
IF JAPAN REFUSES?

with agents of the Ministry of Communications, is so far-reaching that it is not yet properly mapped. In defiance of the precise terms of the Anglo-Japanese Alliance Treaty, which calls upon her to communicate fully and frankly with her ally, Japan’s watchword in Peking has been obscurantism and nothing but obscurantism, with disastrous results for the future well-being of the Chinese people.

And here it is necessary specially to note that until Viscount Ishii made his historic pilgrimage to Washington in 1917, and induced the United States to write the indiscreet Lansing-Ishii Notes, she was forced to hold her horses; no sooner were the Notes in her archives than she began to act in an imperious way.¹ China had created a so-called War Par-

¹ See the Appendix, Document A, for the full text. To realize the precise value of the step Mr. Secretary Lansing waa induced to take in writing his Note to Viscount Ishii it is necessary to point out that from the Far Eastern point of view everything depends on the Chinese translation. In the case of the American official translation, communicated to the Chinese Foreign Office, “special interests in China” was translated as meaning: to have a share in—to be concerned with. In the Japanese official translation, communicated to the Chinese Foreign Office in advance of the American communication, “special interests” is translated as—specially acquired advantages, i.e. predominance.

In other words, by a trick, Viscount Ishii and his friends created the impression in the mind of the Chinese Government that America, faced by armed Japan, had acquiesced in Japanese hegemony in Eastern Asia and that everything was over.
TRUTH ABOUT CHINA AND JAPAN

ticipation Bureau, i.e. a Special Military Office, with a number of well-equipped divisions depending upon it, nominally for dealing with the question of organizing an expeditionary force to proceed to France, but in reality (since it was under the control of the Northern military party) to continue the fight with the South and to crush Canton. For a number of months this amiable object was assiduously pursued, fed by funds from Japan acquired by secret agreements, and with not the slightest regard for China’s international pledges. Although France went so far as to offer to finance a Chinese expeditionary force, division by division as they were shipped, and drew up many memoranda to that end, Japan saw to it that the plan was killed. When intervention in Siberia seemed inevitable in May, 1918, Japan signed with the War Participation Bureau the secret Sino-Japanese military agreement in a last effort to defeat America’s plan of helping Russia.¹ By creating a new international imbroglio in which railways, Bolsheviks, and

¹ For the full text of the Sino-Japanese Secret Military and Naval Conventions, and the secret Arms Contracts, see Documents B and D in the Appendix, with explanatory notes attached. No impartial critic can deny, after studying these dark doings, that the whole structure of Japanese foreign policy must be changed if she is to be treated on equal terms by the rest of the world.
IF JAPAN REFUSES?

Tsarists of the stamp of General Horvath would be so mixed as to defy a solution, she added to the chaos beyond Lake Baikal; and since the triumph of the Allies and the armistice of the 11th November, by forcing the Peking Government to rename this office the National Defence Bureau, she has managed to retain it as the headquarters for Japanese intrigues. Among recent secret agreements signed by the corrupt generals attached to it is said to be one relating to Fuhkien province, which is reported to place that strategically important zone, which dominates the island of Formosa, on a quasi-Manchurian footing.

This challenge to the world's decency and honour can no longer be disregarded; it must be taken up, since imperialist Germany cannot be considered properly crushed until her copied methods have been eradicated from the Far East.

The root of the evil lies in the present nature of the Japanese Government; in the fact that under the present Constitution it is perfectly legitimate for the Japanese Ministry of War to direct the Empire's policy in China and to be above the control of the Diet.¹ A Japanese

¹ Vide the extracts from the Japanese Constitution in Document H, Appendix.
TRUTH ABOUT CHINA AND JAPAN

Cabinet, directly responsible to the Diet under the Constitution, is absolutely essential to the peace and happiness of the Far East; unless that, as well as a proper extension of the franchise, can be acquired by constitutional means, it is essential to oppose Japanese intimidation of China by methods other than those adopted during the war.

For it is force that is behind the Japanese programme—not equity or justice, but force, mixed with corruption. This force is to-day semi-antiquated; for Japanese armaments are still much where they were after the Russo-Japanese War, and are totally unequal to the challenge offered to first-class maritime Powers with great interests to protect in the Far East. Indeed, it is obvious to observers on the spot that the asset of geographical isolation has been exhausted and if the League of Nations is to have meaning and reality in the East as in the West there is a method available which would instantly change the situation.

Grey battleships on the horizon-line would bring home to Japanese leaders what all the butchery of the war has failed to teach: too long have the waters of the Yellow Sea been without adequate protection.

Japan indeed stands at the cross-roads. It
IF JAPAN REFUSES?

is for her to elect what her future is to be; whether the bacillus of imperialism is to be blown out by explosion, or dissipated by reform. Korea cried aloud for decent treatment —Korea can to-day rightfully demand either Home-rule or proper representation of her people in Japan’s Diet. Here, if there ever was a case, is a country which should be administered only under a mandatory derived from a League of Nations; for what has Korea done that she should be treated as a conquered province? and why should Manchuria and the province containing the birthplace of Confucius—Shantung—be menaced by the same fate? It is not true that these regions are necessary for the overspill of the Japanese population; for they are densely populated and are not attracting Japanese immigrants. Korea, which has been under the Japanese heel for fifteen years, has to-day less than 400,000 Japanese immigrants, or a net increase of 300,000 persons since the Russo-Japanese War. During this period the Korean population has increased by over 3,000,000, and in less than two decades the land will be far more crowded than Japan. In the case of Manchuria, experience has not only conclusively proved that the Japanese cannot compete as farmers with the Chi-
nese—that is, they cannot go on the land—but in petty trade the Chinese are ousting them, the Japanese being able to retain their hold only by a system of preferential treatment and anti-Chinese regulation which they assiduously enact in the Port Arthur leased territory and along the zone of the South Manchuria railway in a last effort to justify their claims. As for Shantung, that has long been so densely populated by the native race that vast numbers of men must go annually to other provinces—particularly to Manchuria—to find food, the villages in Shantung being so thick on the ground as to form continuous chains. It is not sufficiently known that since 1900 the population of China has increased by 68 millions—that is, by considerably more than either the present population of Germany or Japan; and that by the middle of the present century the Chinese cannot number less than 600 millions. Although Japan's northernmost island of Hokkaido is practically uninhabited and could carry 12 million people at the lowest competition, she vainly tries to push her people on to the Asiatic mainland so as to justify her so-called Asiatic Monroe Doctrine, which means for her not the protection but the subjection of the East. Hating to go abroad save to the white man's lands,
IF JAPAN REFUSES?

where they earn great profits rapidly and easily, the Japanese care so little for their annexed territories that the Japanese population of Formosa has long been stationary if it has not actually receded. Town-dwellers by instinct; leaving much of their agriculture to women, who labour early and late in the fields, for them foreign parts have no attractions. Colonization is indeed alien to their natures; it is their military leaders who are trying almost by force to make them build a fabric of empire in the extraordinary manner we have indicated.

There is no more to be said—not a word. We have placed the problem under the searchlight; we have indicated the solution. If there is justice enough left over after Europe has settled her own troubles, Eastern Asia is surely the first claimant. For unless that precious quality is used in abundance, the day is not far distant when the crash will come and men must fight again.

TEXT OF THE LANSING-ISHII NOTES

Department of State.

Excellency:
I have the honour to communicate herein my understanding of the agreement reached by us in our recent conversations touching the questions of mutual interest to our Governments relating to the Republic of China.

In order to silence mischievous reports that have from time to time been circulated, it is believed by us that a public announcement once more of the desires and intentions shared by our two Governments with regard to China is advisable.

The Governments of the United States and Japan recognize that territorial propinquity creates special relations between countries, and, consequently, the Government of the United States recognizes that Japan has special interests in China, particularly in the parts to which her possessions are contiguous.

The territorial sovereignty of China, nevertheless, remains unimpaired, and the Government of the United States has every confidence in the repeated assurances of the Imperial Japanese Government that,
TRUTH ABOUT CHINA AND JAPAN

while geographical position gives Japan such special interests, they have no desire to discriminate against the trade of other nations or to disregard the commercial rights heretofore granted by China in treaties with other powers.

The Governments of the United States and Japan deny that they have any purpose to infringe in any way the independence or territorial integrity of China, and they declare, furthermore, that they always adhere to the principle of the so-called 'open door,' or equal opportunity for commerce and industry in China.

Moreover, they mutually declare that they are opposed to the acquisition by any government of any special right or privileges that would affect the independence or territorial integrity of China, or that would deny to the subjects or citizens of any country the full enjoyment of equal opportunity in the commerce and industry of China.

I shall be glad to have your Excellency confirm this understanding of the agreement reached by us.

Accept, Excellency, the renewed assurance of my highest consideration.

ROBERT LANSING.

His Excellency,

VISCOUNT KIKUJIRO ISHII,
Ambassador Extraordinary and Plenipotentiary of Japan, on Special Mission.

DOCUMENTS CONCERNING MUTUAL AGREEMENTS BETWEEN CHINA AND JAPAN RELATIVE TO JOINT ACTION AGAINST THE ENEMY

(Otherwise known as the Secret Sino-Japanese Military Agreement of May, 1918)

TABLE OF DOCUMENTS

I. Exchange of Notes relative to Joint Action against the Enemy—2 documents.
II. Military Agreement for Joint Action against the Enemy—in 12 Articles.
III. Naval Agreement for Joint Action against the Enemy—in 9 Articles.
IV. Explanatory Notes supplementing the Naval Agreement.
V. Explanatory Notes concerning Important Points in Military Agreements—in 7 Articles.
VI. Statement concerning the Time of Termination of Joint Military Action against the Enemy.
VII. Statement concerning the Time of Termination of Joint Naval Action against the Enemy.
The Chinese Minister to Japan to the Japanese Minister for Foreign Office

Dated March 25, 1918.

Excellency:

I have the honor, under instructions from my Government, to bring up for consideration by Your Excellency's Government certain questions, below outlined, which my Government, having regard for the present day situation, believes to be of the utmost importance to both our countries, and which it desires to attend to in co-operation with your Government:

1. The Chinese and Japanese Governments, in view of the daily increasing strength of the enemy, within the borders of Russia, the result of which cannot help but be a menace to the peace and tranquillity of the entire Far East, and having due regard for these facts, and for the necessity that the two countries are under of entering into this conflict, cannot but take into consideration at an early date the question of what joint action they should take.

2. In accordance with the idea above outlined, after the two countries have come to an understanding, and in pursuance of such decision as may be made, the proper officials of the two countries should arrange
APPENDIX

jointly for the delineation of the sphere of such joint military and naval operations as may be contemplated against the enemy, and should draw up the rules therefor. The proper officials should, when the time comes, consider together carefully and frankly the question as to the mutual rights and restrictions of the two countries, so that after these decisions have been made, active operations may be undertaken when the occasion arises.

I have the honor to present the above points for Your Excellency's consideration and request the honor of a reply.

I avail myself of this opportunity to renew to Your Excellency the assurance of my highest consideration.

CHANG TSUNG-HSIANG, [Seal]
Chinese Minister.

His Excellency,
The Minister for Foreign Affairs.

REPLY OF THE MINISTER FOR FOREIGN AFFAIRS TO THE CHINESE MINISTER

Dated March 25, 1918.

Excellency:

I have the honor to acknowledge the receipt of your note as follows:

"I have the honor, under instructions from my Government, to bring up for consideration by Your Excellency's Government certain questions, below outlined, which my Government, having regard for

II

THE SINO-JAPANESE JOINT MILITARY PACT

In accordance with the result of the negotiations between the Governments of China and Japan and also with the documents exchanged between them (see appendices Nos. 1, 2, 3 and 4) the following Articles have been decided upon by the officials appointed by the military authorities of the two countries:

Article 1. The Armies of China and Japan, seeing that the enemy influence has extended to Russian territory, realizing that the general peace and tranquillity in the Far East having been endangered, and being agreed that the two countries should carry out their duties as participants in the War, have decided to adopt defensive measures against the enemy.

Article 2. Regarding the joint military action the two countries should regard each other on an equal footing in respect of their position and also their advantages and disadvantages.

Article 3. The Governments of China and Japan shall, from the date this Pact commences to be oper-
TRUTH ABOUT CHINA AND JAPAN

ative, issue instructions to their armies, officers and civilians ordering them to accord favourable treatment to each other in all the areas of action so that the object of adopting joint defensive measures against the enemies may be realized.

The Chinese authorities within the war area shall try their best to co-operate with the Japanese armies in order to prevent the Japanese armies from experiencing any obstacles, while the Japanese troops shall respect the sovereign rights of China as well as observe the usual customs of the Chinese so that they may not experience any inconvenience.

Article 4. All the Japanese troops in Chinese territory employed for joint defence against the enemy shall, after the termination of the war, be entirely withdrawn.

Article 5. The two countries shall dispatch their armies to places outside their own territories whenever it is deemed necessary.

Article 6. The duties of the contracting parties within the war area or arising from the war, shall, when consistent with the object of the Defence Pact, separately be decided upon by the military authorities of the two countries according to their respective military strength.

Note.—With reference to the term "shall be separately decided upon" in Article 6 the said decision shall be agreed upon by both parties prior to the operation of war.

Article 7. The military authorities of both parties
APPENDIX

shall, during the time of joint military operations, carry out the following measures in order to facilitate co-operation:

I. The two contracting parties shall each appoint officers to the organs directing the military operations in order to keep open the means of communication.

II. In order to facilitate the military operations and the transportation of supplies, the two contracting parties shall mutually assist each other in the transmission of naval and military communications.

III. In connection with constructions necessary to the operation of war, such as railways, telegraphs and telephones, etc., they shall be temporarily agreed upon by the commander-in-chief of both parties until the end of the war, when all such works should be removed.

IV. Arms and military necessities and their raw materials needed for the joint defence are to be provided to each other in such quantities as not to interfere with those needed by their own respective countries.

Article 8. When the time comes to use the Chinese Eastern Railway for transporting purposes the original treaties shall be observed in the directing or controlling of this line. The method of transportation shall be decided as occasion requires.

Article 9. The detailed stipulations governing the enforcement of this Pact shall be mutually decided upon by delegates appointed by the military authorities of the two contracting parties.
TRUTH ABOUT CHINA AND JAPAN

Article 10. This Pact as well as all other matters contained therein shall be kept secret as military matters by China and Japan.

Article 11. This Pact shall become valid after it has been signed and sealed by the military representatives of China and Japan and also recognized by their own governments. The time to commence war operations shall be decided by the high commanding quarters of the two countries. All rules based on this Pact shall become null and void after the war against Germany and Austria has come to an end.

Article 12. This Pact is written in both Chinese and Japanese in duplicate and after it has been signed each of the parties shall retain a copy as proof.

TEXT OF THE SINO-JAPANESE JOINT MILITARY DEFENCE PACT

In accordance with the results reached after negotiations between the Chinese and Japanese Governments and the official notes exchanged at Tokyo between the two Governments on the 25th day of the 3d month of the 7th year of the Chinese Republic, that is the 25th day of the 3d month of the 7th year of Taisho, the delegates appointed by the naval authorities of both countries of the two countries have agreed upon the following terms:—

Article 1. In view of the eastward extension of the enemy influence as a result of which the peace and tranquillity of the entire Far East will be menaced, and with a view to coping with such a situation and discharging the obligations of the two countries as participants in the present European
TRUTH ABOUT CHINA AND JAPAN

War, the Chinese and Japanese navies shall take concerted defensive measures against the enemy.

Article 2. In taking joint military action the two parties shall respect their mutual advantages and disadvantages and equality regarding their respective positions.

Article 3. When the two parties begin to take action in accordance with this Pact each shall issue orders or instructions to their respective warships and officials and civilians in the war areas, enjoining them to accord favourable treatment to, and take concerted action with, each other in order to realize the object of defending jointly against the enemy.

Article 4. Regarding the war areas and obligations in connection with war for the purpose of defending jointly against the enemy the naval authorities of the two countries shall make agreements in accordance with their respective naval strength.

Article 5. With a view to facilitating co-operation in time of war the naval authorities of both parties shall do the following:

I. Each party shall appoint officers to communicate with the naval organs directly connected with naval operations of the other party.

II. With a view to ensuring the activity and accuracy in transportation and supply, each party shall give every facility to the other regarding transportation and the transmission of messages on land or on water.

III. Regarding the repairs of warships, arms and
APPENDIX

war machines, etc., and the materials required for that purpose, each party shall render assistance to the other within their ability; and so with other war necessaries.

IV. Regarding naval technical officers directly connected with war if the Chinese and Japanese navies require mutual assistance the same shall be supplied by each upon the request of the other.

V. The navies of the two countries shall establish scout organs themselves in the areas in which the same are required and exchange navigation charts and reports required for joint action. And with a view to ensuring the activity and accuracy in message transmission and mutual communication in order to afford mutual help and facilities, the two parties concerned shall consider and agree upon the necessary organizations and establishments at times when the same are required.

VI. The naval signals shall be mutually decided upon.

Among the matters stipulated in the various provisions of this Article those that require planning or execution in advance shall be mutually agreed upon before actual operation of war takes place.

Article 6. Regarding the detailed stipulations for the enforcement of this Pact they shall be decided and agreed upon by the negotiators appointed by the naval authorities of the two countries.

Article 7. China and Japan shall not give publicity to this Pact and the detailed stipulations supple-
TRUTH ABOUT CHINA AND JAPAN

mentary thereto. They shall be treated as naval secrets.

Article 8. This Pact shall take force as soon as it has been signed and sealed by the naval representatives of the two countries and sanctioned by the two Governments. War operations shall commence after an agreement and decision have been reached between the highest naval authorities of the two countries by negotiations at an opportune moment.

This Pact and the detailed stipulations based on the said Pact shall become null and void as soon as the state of war between China and Japan and Germany and Austria has terminated.

Article 9. Two sets, each containing two copies, one in the Chinese and the other in the Japanese language, shall be provided and signed and sealed after a comparison. Each party shall keep one set for reference.

(Signed and sealed in Peking) on the 19th day of the 5th month of the 7th year of the Chinese Republic.

The 19th day of the 5th month of the 7th year of Taisho.
APPENDIX

IV

AN EXPLANATORY NOTE TO THE SINO-JAPANESE NAVAL JOINT DEFENCE PACT

(1) With a view to facilitating Sino-Japanese naval co-operation in war and in order to fulfil the object of Article 1 of the Joint Defence Pact, the Chinese and Japanese navies shall take concerted action and render assistance to each other so that the military plans may be fully and effectively carried out.

(2) The following explanations should be appended to the various sections of Article 5 of the Joint Defence Pact:

Regarding the officers stated in Section I, they shall be appointed from among the naval attachés to the Legation and the naval officers stationed at various places. When the appointment of other officers becomes necessary they may be appointed upon mutual agreement at any moment.

In Section III regarding the materials required, as metals, military requisites, as fuel, foodstuffs and munitions, the two parties shall each supply such quantities as are within their power.

Regarding the exchange of navigation charts as stated in Section V it shall be done upon the request by any one party. When a supplementary survey of the bays in the military areas becomes necessary in the opinion of representatives of both parties the naval officials of the country to which the said ter-
TRUTH ABOUT CHINA AND JAPAN

ritories belong shall make a supplementary survey of the same.
(Signed) The 19th day of the 5th month of the 7th year of the Chinese Republic,
The 19th day of the 5th month of the 7th year of Taisho (in Peking),
By Chief Delegate, Vice-Admiral Sheng Shou-kun.

[Delegates:]
Rear-Admiral Wu Cheng-nan,
Rear-Admiral Chen En-tao,
Junior Captain Wu Kwang-chung.
Rear-Admiral Yoshida,
Captain Ishuyin,
Captain Kabayama.

V

DETAILED STIPULATIONS REGARDING THE ENFORCEMENT OF THE SINO-JAPANESE JOINT MILITARY DEFENCE PACT

In accordance with Article 9 of the Sino-Japanese Joint Military Defence Pact the officers concerned appointed by the military authorities of the Chinese and Japanese Governments have agreed upon the following terms regarding Articles 6 and 7 of the said Pact:—

Article 1. China and Japan shall each dispatch a portion of their forces to the Rear (? ) Baikal and
Heilungchow (Amur) regions to carry on separate military operations there. Their duties shall be to assist the Czecho-Slovak forces and oust German and Austrian influences and those helping them.

In order to secure uniformity of command and facilitate the co-operation, the Chinese forces in the said areas shall be placed under the command of the Commanding Japanese officer.

In order to enable the troops operating from Manchuli to Rear Baikal to assist and communicate with each other a portion of Chinese troops shall carry on operations in the areas extending from Urga to the Lake of Baikal. In case China wishes a portion of Japanese troops to be dispatched to those areas Japan will do so and place them under the command of the Commanding Chinese officer.

China shall take defensive measures herself to strengthen her position on the frontiers westward of Central Mongolia.

Article 2. Regarding the mutual supply of war materials, although agreements may be entered into between the Commanders at the front in regard to absolutely necessary articles, yet regarding the supply of other articles and materials agreements shall be arrived at between the highest war supply organs in Tokyo and Peking.

Article 3. Regarding sanitary measures Japanese troops shall, if China wishes, offer the Chinese troops every facility within their ability. But in future when the circumstances shall have developed Japanese
troops shall be entitled to receive assistance from China regarding the establishment of hospitals and resting stations, etc.

Article 4. Regarding the transportation of Chinese troops and war supplies through the South Manchuria Railway, China shall first convey such materials to Dairen, Yingkow or Fengtien, whence their transportation to Changchun shall be undertaken by the Japanese troops.

If China wishes a body of Japanese troops to be sent to join the Chinese troops going from Urga to carry on operations in the Baikal regions the transportation of these Japanese troops and war supplies to Taku, Chinwantao or Fengtien shall be undertaken by the Japanese troops themselves; but henceforward it shall be undertaken by the Chinese troops.

Regarding transportation through the Chinese Eastern Railway it shall be undertaken by the authorities of the said railway administration. And with a view to facilitating negotiations with the said authorities and making systematic and regular the transportation of Chinese, Japanese and Czecho-Slovak troops, China and Japan shall establish joint organs. If the Allied troops operating in these regions want their appointed officers to participate in these organs they may be allowed to do so.

Article 5. Regarding the appointment of communication officers, if future circumstances necessitate the appointment of other officers than those whose appointment has already been mutually agreed upon
APPENDIX

the same shall be undertaken by the highest war supply organs in Tokyo and Peking. Regarding other matters negotiations may be conducted from time to time.

Article 6. For the weapons, war supplies and raw materials to be mutually supplied and for the transportation of troops by each country prices shall be paid either from time to time or after the conclusion of the military operations.

Article 7. Two sets of this document, each containing two copies, one in the Chinese and the other in the Japanese language, shall be provided, and signed and sealed by the two contracting parties after comparison. Each party shall keep one set for reference.

The 6th day of the 9th month of the 7th year of the Chinese Republic.

The 6th day of the 9th month of the 7th year of Taisho.

VI

A SUPPLEMENT TO THE SINO-JAPANESE JOINT MILITARY DEFENCE PACT

The Government of China and the Government of Japan after negotiations between their respective highest military representatives have, according to Article 9 of the Sino-Japanese Joint Military Defence Pact and the provision regarding the termination of the state of war embodied in Section 2, Article 11, of the said Pact, agreed upon the following terms:—
TRUTH ABOUT CHINA AND JAPAN

The termination of the state of war against the enemy countries, namely Germany and Austria, shall mean the time when both the Chinese and Japanese Governments shall have approved the Peace Treaty concluded with the enemy countries by the European Peace Conference and when both Chinese and Japanese troops stationed outside Chinese territories shall have been withdrawn simultaneously with the troops of the various Allied countries stationed in the same territories.

Two sets of this Pact each containing copies, one in the Chinese and the other in the Japanese language, shall be provided, and signed and sealed by both parties after comparison. Each party shall keep one set for reference.
(Signed) The 5th day of the 2d month of the 8th year of the Chinese Republic.
The 5th day of the 2d month of the 8th year of Taisho.
By the Military Representatives of the Chinese Republic.
The Military Representatives of the Japanese Empire.

VII

A SUPPLEMENT TO THE SINO-JAPANESE JOINT NAVAL DEFENCE PACT

The Government of China and the Government of Japan, after negotiations between their respective
APPENDIX

highest naval authorities, have, according to Article 6 of the Sino-Japanese Joint Naval Defence Pact, and the provision regarding the termination of the state of war embodied in Section 2, Article 11 of the said Pact, agreed upon the following terms:—

The termination of the state of war against the enemy countries, namely, Germany and Austria, shall mean the time when both the Chinese and Japanese Governments shall have approved the Peace Treaty concluded with the enemy countries by the European Peace Conference and when both Chinese and Japanese naval forces shall have been withdrawn from Russian territories simultaneously with the naval forces of the various Allied countries stationed in the same territories.

Two sets of this Pact, each containing two copies, one in Chinese and the other in the Japanese language, shall be provided and signed and sealed by both parties after comparison. Each Party shall keep one set for reference.

The 1st day of the 3d month of the 8th year of the Chinese Republic.

The 1st day of the 3d month of the 8th year of Taisho.

N.B.—In addition to these various agreements, there are certain memoranda to interpret the meaning of the various clauses which are still kept secret.
JAPANESE SECRET LOANS TO CHINA
IN 1918

1. Jan. Mitsui Bussan Kaisha to the Central Government on the Bureau of Engraving and Printing. 2,000,000 Yen
2. " Yokohama Specie Bank's share of Group Bank advance for flood relief 200,000
3. " Mitsui Bussan Kaisha to military governor of Chihli for military purposes. 1,000,000
4. " Second advance on Second Reorganization Loan by the Yokohama Specie Bank 10,000,000
5. " Japanese Syndicate to rebel government of the province of Hunan 20,000,000

These twenty-nine loans amounted to Yen 246,400,-000. The Chinese Government used the most valuable national assets, such as mines, railways and industrial organizations, as security for them. The conferring of orders and decorations by the Japanese Government upon nine officials "in recognition of the services rendered with regard to loans to China" is one of many proofs to substantiate this statement. Among those nine officials are Mr. Shoda, late Finance Minister; Mr. Ichiki, late Vice-Minister of Finance; Mr. Shinno, Director of the Financial Bureau in the Finance Department; Dr. Kobayashi, Japanese financial agent at Peking, Mr. Shoda and Mr. Ichiki being recipients of the First Order of the Sacred Treasure. Mr. Nishihara, who was active in 1918 in
securing loans for Japan, was not decorated, perhaps because he is not an official. The Japanese Government has also conferred a number of orders and Gold Cups upon military officers “in recognition of the service rendered in connection with the conclusion of the Sino-Japanese Military Agreement”. Japan’s object in encouraging reckless borrowing by the Chinese Government is undoubtedly to secure control of China’s finances.

(D)

THE SECRET ARMS CONTRACTS BETWEEN CHINA AND JAPAN

Note.—There has been great difficulty in obtaining even in 1919, when a world-wide disclosure of secret agreements has come and when militarism is publicly denounced, any proper and complete statement of the several Secret Arms agreements made between the Northern militarists in China and the Japanese War-Office—both parties acting independently of their Cabinets. The writer has, however, succeeded in recovering the complete specifications of two agreements, one—undated—made in 1916 or 1917 and the other in 1918, the first involving an expenditure of Yen 14,866,798, Japanese currency, and the second an expenditure of Yen 23,600,739, Japanese currency—or a total of upwards of 38 million yen—say four million pounds sterling. Whether there have been earlier or later indents has not been established, but the two agreements follow a set plan, and from the study of the Chinese text seem to point to the existence of a master-document. Certainly, since the signature of the May, 1918, secret Sino-Japanese Military Agreement, there has been established a settled procedure between Japanese and Chinese corruptionists. Arms negotiations, although now suspended owing to the international situation and the tumult at Paris, were at the beginning of 1919 still being continued along these lines. According to inspired statements in the Japanese press,
the following was the plan nipped in the bud by developments at the Paris Conference:

1. Arsenals to be established in Tientsin, Hankow and Shanghai to be jointly conducted by China and Japan, with Japanese expert engineers and material supplied.

2. The Chinese Government to purchase direct from the said arsenals or from Japan for ten consecutive years arms and ammunition to the amount of Yen 300,000,000, that is, Yen 30,000,000 annually.

3. During this period of ten years, China not to place any restrictions upon the exportation of iron to Japan.

4. The money needed for expenses of the Chinese Government in making purchases of arms to be loaned in the form of temporary advances from Japan, that is, by the Taiping Company.

5. Until the Chinese Government shall have made full payment for the foregoing purchases, Japan shall have the priority right of supplying arms to China.

It is plain from these proposals, which almost matured, that the arms section of the Group V of the Twenty-one Demands of 1915 is still the acknowledged goal of the military party in Japan. It may be remarked that there is no reason for China to purchase war-materials abroad as her government arsenals have a large capacity. But the military group required immediate delivery of large quantities of rifles, ammunition, field-guns and equipment, so that they would be independent of the Ministry of War, which must render account to the Cabinet. Thus what Japan has deliberately done has been to break down the fabric of government in China—and create a situation precisely analogous to what Germany did with the Young Turks. The text that follows is the first few folios of the Arms Agreement of 1916 (or 1917).

(Translation)

An Agreement made between the Taiping Company and the War Office of the Republic of China so that the former may receive an order from the latter to supply the arms. The quantities and cost are specified as follows:—

183
TRUTH ABOUT CHINA AND JAPAN

Note.—Sections that follow are merely lists of the same materials with amounts and prices specified.

The contract of July, 1918, is a double order of the same military supplies. Thus in the Second Contract the main items specified are:

- 85,000 rifles
- 67 million rounds small-arms ammunition
- 198 machine-guns
- 95 million rounds machine-gun ammunition
- 162 mountain-guns
- 81,000 high explosive shells
- 16,200 time-fuse shells
- 72 field-guns

Etc. Etc.

From these figures it is plain that the Japanese military party deliberately and secretly supplied their Chinese tools with a carefully-drawn-up list of material sufficient to conduct a long civil war and to butcher whole provinces, the larger number of mountain-guns being specially provided for warfare in the provinces south and west of the Yangtsze.

The indictment against militarist Japan, then, not only is that she deliberately prevented China from participating actively in the war in Europe, but that she lent all possible aid to movements calculated to disrupt China.

If German officers are to be brought to trial for offences conducted during the war, the guilty Japanese officers ought to meet the same fate.

(E)

THE SHANTUNG RAILWAY AGREEMENT
OF SEPTEMBER 24, 1918

Communications between the Japanese Foreign Office and the Chinese Minister to Japan

The Shantung Railway Agreement of September 24, 1918, was signed by the Chinese Minister to Japan, but was not ratified by the Chinese Government. Japan advanced $10,000,000 on the strength of the agreement and the Japanese Minister to Peking
SKETCH MAP SHOWING (IN RED) THE FOUR MANCHURIAN AND MONGOLIAN RAILWAYS JAPAN IS ACQUIRING TO DOMINATE PEKING.
APPENDIX

now states that there is no reason why the agreement should have been ratified by China, as it is binding upon her in any case. The question is asked—"Can the Minister of any power make with the state to which he is accredited a treaty that is binding, without further ratification, upon his own government?" If so a new and very far-reaching principle in international law will have been established.

The agreement has been transmitted by cable to China’s peace delegates in Paris, who have been instructed to lay it on the table of the Peace Conference. It is considered a question for that Conference.

It will be observed that under this secret agreement Japan proposes to garrison permanently the capital of Shantung province; to control the police along the railway zone; and to place the Shantung railway under ‘joint control’. These steps are tantamount to annexation.

TEXT OF AGREEMENT

Minister of Foreign Affairs, Tokio
to
H. E. Chang Tsung Hsiang,
Chinese Minister to Tokio.

Foreign Office, Tokio,
Sept. 24, 1918.

In view of the neighbourly feelings of friendship between our two countries, the Government of Japan,
being desirous of arranging matters in a spirit of harmony, has drawn up an agreement which it regards as a satisfactory settlement of all outstanding questions relating to the Province of Shantung, and I now have the honour to bring this proposal to the notice of your Government. The terms of the proposed agreement are as follows:

I

All Japanese troops stationed along the Shantung Railway—with the exception of one regiment which will be left at Tsinan—will be withdrawn to Tsingtao.

II

The Chinese Government may establish a Police Force which shall take over the duty of guarding the railway.

III

The Administration of the Shantung Railway shall set aside a sufficient sum to meet the expenses of the Police Force.

IV

Japanese subjects are to be employed at the Headquarters of this Police and at all important stations and in the Police Training School.

V

Among the employés of the Shantung Railway posts shall be given to Chinese subjects also.
APPENDIX

VI

After it has been definitely decided to whom the Shantung Railway is to belong the railway is to be placed under the joint management of China and Japan.

VII

The Civil Administration Offices now in existence are to be abolished.

I have the honor to request that you will communicate to me views of your Government with regard to the above proposal.

I have, etc.,
(Sd) Baron Goto,
Japanese Minister for Foreign Affairs.

CHINESE MINISTER'S REPLY

Chang Tsung Hsiang,
Chinese Minister at Tokio,

to

Japanese Minister for Foreign Affairs.

Tokio
(No date)

Sir,

I have the honor to acknowledge receipt of your letter couched in the following terms:—

(Quotes in full letter from Minister for Foreign Affairs of September 24, 1918.)

187
TRUTH ABOUT CHINA AND JAPAN

I have the honor to inform you that the Government of China accepts with pleasure the proposal contained in the letter quoted above.

I have, etc.

(Seal of CHANG TSUNG HSIANG,
Envoy Extraordinary and
Minister Plenipotentiary.)

(Translation)

KIRIN AND HEILUNGCHIANG MINING AND FORESTRY AGREEMENT

Note.—This agreement is a good illustration of Japanese secret methods: for a sum equivalent to three million pounds sterling the forests and mines of the two northernmost Manchurian provinces, with an area hardly inferior to France and Germany, and worth incalculable sums, are mortgaged in such a way as to give Japan prior rights. This agreement must be broken.

For the object of developing the Mining and Forestry industry in Kirin and Heilungchiang provinces, the Government of the Republic of China (hereafter called the First Party) agrees to conclude a loan for thirty million yen (Yen 30,000,000) with the Tsung Hua Hwai Yi Bank (hereafter called the Second Party). The Articles which are agreed to by the two Contracting Parties are as follows:

1. The total amount of this loan is thirty million yen.
2. The term of the loan is ten years, which therefore expires on the first of August, 1928. But the loan may be continued by a further arrange-
APPENDIX

ment between the said Parties at the expiration of the above stipulated term.

3. Five years from the date of signing this Agreement, however, a part of the loan may be repaid after a prior notice of six months.

4. The interest on this loan is $7 \frac{1}{2} \%$ annually, which is ¥7.50 for every 100 yen, but for any additional term as provided for in Article 2 the rate of interest shall be fixed again according to the state of the money-market.

5. The payment of the first instalment of the interest, which begins from the date of the paying-over of the loan up to the 14th Jan., 1919, shall be made in advance by the First Party. After that, every six months' interest shall be paid in advance on the 15th January and 15th July of every year. But the last interest-payment shall be made by a calculation carried up to the last day of the term of loan and be paid in advance.

6. The payment of this loan will be made fully without any deduction.

7. The payment of the principal and interest shall be made in Tokio, Japan.

8. The security of this loan is as follows:
   (a) The Mines and Governmental Forests in the Kirin and Heilungchiang provinces.
   (b) The Governmental income on the production of the above mentioned Mines and Forests.
9. If the First Party wishes to conclude any other loan with other Parties, using the above mentioned Mines and Forests or the Governmental incomes as security, an arrangement must be first made with the Second Party.

10. This Agreement shall be void when full redemption of capital and interest have been made.

This Agreement is in Japanese and Chinese, three copies in each language. The Ministry of Agriculture and Commerce, the Ministry of Finance, and the Second Party shall each retain one copy of both Japanese and Chinese. If there is dispute regarding the meaning, the Japanese copy shall be considered authoritative.

Tien Wen Lih, Minister of the Ministry of Agriculture and Commerce.

Tsao Ru Lin, Minister of the Ministry of Finance.

Lu Tsung Yu, the General Manager of the Tsung Hua Hwai Yi Bank.

Shih-nan-chuang-tse-long, the Japanese Business Manager of the Tsung Hua Hwai Yi Bank.

2nd August, 1918.

(G)

MANIFESTO OF THE KOREAN PEOPLE ISSUED TO THE WORLD ON MARCH 1, 1919

EXPLANATORY NOTE.—This most remarkable Manifesto of the Korean people derives much of its importance from the fact that it was drawn up and signed by the leaders of all the cultural-religious associations in the country.

The first signatures were the leaders of the so-called Tien Tao Hui, or Heaven-Worshippers. This association, which now numbers millions of people, was originally created sixty years ago to oppose the introduction of Roman Catholicism into Korea. It is based partly on Confucianism, but has elements of Christianity in it. Twenty-five years ago a branch of it in Southern Korea rose and created the obscure Tong-Hak rebellion which gave Japan the excuse to land troops on the plea of restoring order. It is now known that provocative agents arranged the rising, the Tong-Haks (Chinese characters Tung-Hsueh-tang” or Eastern learning society) being nominal advocates of Eastern learning, Anglice, Japanese learning, and opposing the influx of Western influence. This spurious element has now been expelled from the society, which is purely nationalist.

The second group of signatories are Y. M. C. A. workers, many of whom were young officials prior to the annexation.

The third group of signatories are prominent Korean pastors of the Methodist and other Protestant Churches.

The fourth group are the heads of the Buddhist church in Korea.

In all history has been no such cultural union for nationalist purposes; and it is this which must give Korea, with her passive resistance movement, a new place in the world’s regard.

We, the Korean Nation, hereby declare the independence of Korea before all nations, assuming that this will be generously recognized by them.

We declare this with the united voice of twenty 191
TRUTH ABOUT CHINA AND JAPAN

million people in the name of Justice and Humanity. We are no mean people, having a long history as a distinctive, integrative self-governing nation through the course of forty-three centuries. It is a most solemn duty for us to secure the right of free and perpetual development of our own national character and ability, adapting ourselves to the principles of the reconstruction of the world.

It is nearly ten years since we were for the first time in our history put under the yoke of another nation, and made a victim of the cursed militaristic imperialism of the old world. Since then, how much our spiritual development has been hampered, our national dignity injured. And how many opportunities have been lost to make a contribution to the civilization of the world.

Oh, fellow-citizens! The most urgent and the greatest duty for us is to secure our national independence, in order to wipe out the past resentment, to get rid of the present sufferings, to remove the future threatenings, to stir up the national spirit and vitality so long suppressed under the unjust régime of Japan, and to leave our children eternal freedom and perfect happiness instead of the bitter and shameful inheritance of to-day. We shall fight to the last drop of blood in the great cause of liberty.

We do not blame Japan for breaking treaties in which so often and so solemnly she promised to guarantee the independence of Korea. Nor do we complain of her for calling our land a colony and

192
APPENDIX

treating us as slaves. It is unnecessary for us to find faults in others. We do not mean to take such a measure as to avenge ourselves upon Japan. All we desire to do is to right wrongs done to us, not by the Japanese nation, but by a few of her statesmen who were led by the ‘old’ aggressive policy.

See the actual outcome of the annexation which was made in 1910 without the free consent of the peoples concerned. A bitter and irreconcilable animosity is growing deeper and deeper between these two peoples, though it has been glossed over with a tranquil appearance caused only by heavy pressure, and by a series of so-called statistics most of which have nothing to do with our welfare. It is clear that the two nations must and ought to enter into a new relation of good friendship in order to enjoy permanent happiness and to avoid further perils on both sides. Moreover, in the matter of maintaining the peace of the Far East, the independence of Korea is not without deep significance. It is not only because the injustice which subdued twenty million people of Korea must prove a source of incessant alarm, but because any further occupation by Japan of Korea is likely to provoke more suspicion and fear against Japan in the minds of four hundred million people of China; whereas true friendly relations between the two peoples are the only basis upon which any eternal peace of the East can possibly be established. Could any international peace be expected without the perfect harmony of the Eastern Nations? Hence we are as-

193
TRUTH ABOUT CHINA AND JAPAN

sured that the independence of Korea is worthy of universal consideration and approval.

Ah! A new epoch is opening before us. The age of Might is gone, and the age of Right has come. The history of mankind will henceforth shine with the glorious light of the new civilization, led by the spirit of Humanity which has been fostered through all ages past. We have no hesitation and no fear in marching on towards our goal, as we are now at a new turn of the world and a fresh start of the universe. We shall live. We shall be free. We shall enjoy the Heaven-given happiness. We shall do our best as a member of the family of the nations in rendering any service called for to promote the peace and civilization of the world.

We have arisen now! Justice is with us. Righteousness is leading us! All citizens, male and female, young and old, have risen up from the gloomy dungeon to push their way into the bright Freedom. Our forefathers inspire us, and the world support us. Go on, fellow-citizens.

THE REPRESENTATIVES OF
THE KOREAN NATIONAL INDEPENDENCE UNION.
APPENDIX

(A)

ARTICLES FROM THE JAPANESE CONSTITUTION DEFINING THE AUTOCRACY OF THE JAPANESE GOVERNMENT

Note.—The following Articles from the Constitution of Japan give some idea of the autocratic and unrepresentative character of the Japanese Government and disclose the manner in which power is concentrated in the hands of a military and civil bureaucracy without Parliamentary checks.

This is particularly illustrated by Article 71—even the control of the purse being placed beyond the scope of the Diet, which is made powerless in the matter of supplies by the provision that Budgets can be automatically re-enacted from year to year.

The ‘reforms’ introduced in 1919 by the present Hara government do not touch these things: the franchise-qualification has merely been lowered from Yen 10 in direct taxes to Yen 3, which will increase the electorate from 1,460,000 to 2,860,000 voters and still leave great classes of educated men without the vote. Ordinary manhood suffrage, on the basis of the present population, would give Japan at least 13 million voters. Ten million men are therefore left without the vote. The increase of the number of constituencies from 381 to 464 is a step in the right direction; but the Koreans are entirely without representation nor has Formosa any voice at all—the three million Formosans being treated like the seventeen million Koreans as a conquered race.

Article 3. The Emperor is sacred and inviolable.

Article 4. The Emperor is the head of the Empire, combining in Himself the rights of sovereignty, and exercising them according to the provisions of the present Constitution.

Article 5. The Emperor exercises the legislative power with the consent of the Imperial Diet.

195
TRUTH ABOUT CHINA AND JAPAN

Article 12. The Emperor determines the organization and peace standing of the Army and Navy.

Article 13. The Emperor declares war, makes peace, and concludes treaties.

Article 55. The respective Ministers of State shall give their advice to the Emperor, and be responsible for it.

Article 67. Those already fixed expenditures based by the Constitution upon the powers appertaining to the Emperor, and such expenditures as may have arisen by the effect of law, or that appertain to the legal obligations of the Government, shall be neither rejected nor reduced by the Imperial Diet, without the concurrence of the Government.

Article 68. In order to meet special requirements, the Government may ask the consent of the Imperial Diet to a certain amount of Continuing Expenditure Fund, for a previously fixed number of years.

Article 71. When the Imperial Diet has not voted on the Budget, or when the Budget has not been brought into actual existence, the Government shall carry out the Budget of the preceding year.

(I)

THE MANCHURIAN AND MONGOLIAN
(Secret) RAILWAY AGREEMENT

Explanatory Note.—This document, secretly signed in Tokio on the 28th September, 1918, by the Chinese Minister to Japan, acting under instructions not of the Chinese Government but of the Ministry of Communications, is of the utmost
importance for the Japanese plan of the envelopment of Peking and North China by a railway network.

The reader is invited to study the matter on the map. Then it will be seen that the New Manchurian-Mongolian railway project, if allowed to pass unchallenged, will not only monopolize these areas to Japanese influence, but will allow Japan to get control of a new seaport just beyond the Great Wall at Shanhaikwan.

There is little doubt, although the agreement purposely leaves the name a blank, that Hu-lu-tao, an ice-free harbour which was to have been the terminus of the Anglo-American Chincho-Aigun Railway, is meant. This harbour has been developed by British engineers and nearly a million sterling spent on it. It is a magnificent natural harbour superior to Dairen, and it is plain that Japan covets it.

Although the preliminary agreement that follows calls for the signature of a final agreement within four months from the 26th September, 1918) (i.e., before the 28th January, 1919), nothing further has been done in the matter owing to the immense outcry which this matter has raised in China.

The Government of the Republic of China (hereinafter called the Government) for the purpose of constructing railways from Jehol to Taonan; from Changchun to Taonan; from Kirin to Kaiyuan through Hai-lung; and from a point on the Jehol-Taonan railway to a sea-port (hereinafter called the Four Railways of Manchuria and Mongolia), agrees to conclude a contract with a syndicate representative of the Industrial Bank of Japan, the Bank of Taiwan, and the Bank of Chosen (hereinafter called the Banks) in the terms of the following Preliminary Agreement in anticipation of the Formal Agreement:

1. The Government recognizes and approves of the project to construct railways from Jehol to Taonan; from Changchun to Taonan; from Kirin to Kaiyuan; and from a point of Jehol-Taonan
TRUTH ABOUT CHINA AND JAPAN

Railway to a sea-port; and the Banks will issue Gold Bonds for the Government of the Republic of China which will be called the Gold Bonds of the Jehol-Taonan Railway, the Gold Bonds of the Changchun-Taonan Railway, the Gold Bonds of the Kirin-Kaiyuan Railway, and the Gold Bonds of the extension railway (hereinafter called the Gold Bonds of the Four Railways of Manchuria and Mongolia).

The railway line from a given point on the Jehol-Taonan Railway to a given sea-port will be mutually arranged between the Government and Banks.

2. The Government shall make a statement of the necessary expenditure for the construction of these four railways and obtain the consent of the Banks for the same.

3. The term of the Gold Bonds of the Four Railways of Manchuria and Mongolia shall be 40 years and the repayment of the principal in annual instalments shall commence from the 11th year from the date of issue.

4. As soon as the Government concludes the Formal Agreement regarding the said Four Railways of Manchuria and Mongolia with the Banks, the plan for the construction work shall be arranged between the both Parties without further delay.

5. The following will be the security of the issuing of the Gold Bonds of the Four Railways of Manchuria and Mongolia:—
APPENDIX

The properties and income of the Four Railways of Manchuria and Mongolia now and in the future.
The Government may not offer the above-mentioned properties or the income derived therefrom as the security to any other Party without the approval of the Banks.

6. The price and rate of interest of the Gold Bonds of the Four Railways of Manchuria and Mongolia will be arranged between the two Parties at the time of issue.

7. The Articles concerning the above which have not been provided for shall be mutually arranged between the Government and the Banks.

8. This Preliminary Agreement will be the basis of the formal agreement of the Four Railways of Manchuria and Mongolia which shall be made within four months from the date of signing this preliminary agreement.

9. An advance of twenty million yen in full amount without commission will be made by the Banks at the time of the signature of the preliminary agreement.

10. The interest on such advance will be at the rate of 8% annually, which is 8 yen annually for every 100 yen.

11. On the paying-over of this advance, National Treasury Notes will be issued in exchange for the cash.

12. The said National Treasury Notes will be re-
TRUTH ABOUT CHINA AND JAPAN

newed once every six months and on each renewal the interest of the prior six months will be paid over to the Banks.

13. When the formal agreement of the Four Railways of Manchuria and Mongolia is signed, the money received from the issue of the said Gold Bonds shall be employed in part for the repayment of these advances.

14. The paying-over of the advances as well as the payment of interest, with all other details, shall be carried out in Tokio, Japan.

This Preliminary Agreement is in Chinese and Japanese, two copies being made of each. The Government and the Banks shall each retain one copy in Chinese and Japanese. If there is any dispute, the Japanese text will be considered the authoritative one.

This Preliminary Agreement is signed on the 28th September, 1918.

APPENDIX

(J)

THE SHANTUNG RAILWAY EXTENSION AGREEMENT

Explanatory Note.—The railway agreement annexed completes the network of contracts rapidly entered into by the militarist elements in Tokio and Peking prior to the German collapse and the armistice of November 11th.

It will be observed that this Shantung railway extension agreement, like the Four Manchurian and Mongolian railway agreement (Document I) and the unratiﬁed Kiaochow railway agreement (Document E), was rushed through at the end of September, 1918, to complete the pernicious militarist programme drawn up by Japan and her Chinese tools before the fall of the Terauchi Cabinet in Tokio and the Tuan Chi Jui Cabinet in Peking.

Its importance is not so great as the Manchurian-Mongolian agreement, everything depending on the future status of the German Shantung railway (Chinanfu to Tsingtao). If this railway is completely restored to China, the fact that Japan has building contracts west and south of the Shantung provincial capital will not be very important. If the Shantung railway is not completely restored to China, these projected extensions will hasten the Manchurianization of the central China territory.

The following is a translation of the Chinese text of the Tsi-Shun and Kao-Hsu Railways published by the Waichiaopu:

Preamble

For the construction of the railways from Tsinan (Shantung) to Shunteh (Chihli) and from Kaomi (Shantung) to Hsuchow (Kiangsu) (hereinafter called the Two Railways), the Government of the Chinese Republic (hereinafter called the Govern-
TRUTH ABOUT CHINA AND JAPAN

The Government enters upon the following Agreement, a protocol to the final loan agreement with the Representative of the Japanese Industrial Bank (hereinafter called the Bank) which represents the Japanese Industrial Bank, the Taiwan Bank and the Bank of Korea:

Article 1. In order to meet the expenditure for the construction of the Tsinan-Shunteh and Kaomi-Hsuchow Railways, the Government will entrust the Bank for the issue of the Chinese Government Tsin-Shun Railway Gold Loan and the Chinese Government Kao-Hsu Railway Gold Loan (hereinafter called the two Railway Loans).

If it is found after due investigation that the lines fixed will not be profitable for business, the Government may negotiate with the Bank for alterations and changes.

Article 2. The Government shall at once draw up an estimate for the various expenses in connection with the two railways and submit same to the Bank for approval.

Article 3. The term of the loan shall be forty years; and in the 11th year of its issue, the redemption shall commence by instalment in each year.

Article 4. As soon as the Formal Loan Agreement is signed between the Government and the Bank, the construction shall begin.

Article 5. The Government shall give the following security to the Bank for the payment of coupons and the redemption of the loan:
APPENDIX

All the properties and the incomes of these two railways, both the present and the future.

Without the permission of the Bank the Government shall not make use of the above properties and incomes as security to a third party.

Article 6. As to the price of the bonds, the rate of interest and the net proceeds to be received for the two railway loans, they shall be fixed in accordance with the circumstances of the time, and the interest of the Government.

Article 7. All details which have not been provided for in this Agreement shall be fixed between the Government and the Bank.

Article 8. This Agreement shall form the basis for the Formal Loan Agreement of these two railways, which shall be signed four months after its conclusion.

Article 9. After the signing of this, the Bank shall make an advance of Japanese yen 20,000,000 to the Government without commission or any deduction.

Article 10. The interest of the above advance shall be 8%, i.e. Yen 8 per year for each Yen 100.

Article 11. A similar amount of the Government Treasury Bonds shall be given by the Government for the above advance.

Article 12. In a period of each six months these bonds shall be changed, when an interest for this period shall be given to the Bank.

Article 13. After the conclusion of the Formal Loan Agreement, the Government shall refund the
above advances by the proceeds first realized by the sale of the bonds.

Article 14. The transactions connected with the delivery of the proceeds, the payment of interest and the redemption of the above advance shall be done in Tokyo.

Two copies of the above agreement shall be made in Chinese and Japanese and one each be kept by the Government and the Bank. Should doubts arise in any point, the Japanese version shall be followed.

(Signed) CHANG CHUNG-HSIANG
and "HSIAO-YA-YIN ER LAN."
Dated 29th day, 9th month of the 7th Year of the Chinese Republic, etc.

In addition to the above there are two notes addressed to the Japanese Foreign Minister by Mr. Chang Chung-hsiang, stating that the Chinese Government has decided to contract loans from the Japanese capitalists for the construction of the following railways:

2. Between Chanchung and Taoman.
3. Between Taonan and Jehol.
4. A second line between Taonan and Jehol.
5. Between Tsinan and Shunteh.
6. Between Kaomi and Hsuchow, etc.

The Japanese Foreign Minister's Note states that in order to cement the good relations between the two Neighbouring Nations, the Japanese Government has
made the following proposals in connection with the Shantung Problem:

1. With the exception of Tsinan, all the Japanese troops along the Kiaochow-Tsinan Railway shall be withdrawn to Tsingtao.

2. The police forces for the protection of the Kiaochow-Tsinan line shall be organized by the Chinese Government.

3. An adequate amount of money shall be paid by the Kiaochow-Tsingtao Railway to meet the expenses of the above police forces.

4. Japanese shall be engaged in the police headquarters, training institutes, etc.

5. Some Chinese shall be selected and appointed officers for the Chiaochow-Tsinan Railway.

6. It is now definitely fixed that the Kiaochow-Tsinan Railway and its offices shall later on be under the joint control of the Japanese and the Chinese.

7. The civil offices which have now been established shall be abolished.

All the above communications were duly acknowledged and approved by either party.
TRUTH ABOUT CHINA AND JAPAN

(K)

ALLEGED GERMAN-JAPANESE DRAFT TREATY

EXPLANATORY NOTE.—The annexed documents, copies of which only reached Peking via the Trans-Siberian railway at the beginning of April, throw a new and important light on all the subject-matter in the present volume. They prove conclusively that Japanese policy has consistently followed certain lines during the whole course of the war and that domination and exploitation of China is but one phase of a tortuous and incredible diplomacy.

That dynastic considerations enter more and more into the problem is also clear. Plainly, the Japanese oligarchy is desperately struggling by every means in its power to postpone the inevitable day of reckoning.

(From official files of Central Soviet papers secured at Perm on 2d February, 1919)

("Izvestia of the All-Russian Central Executive Com-
mmittees of the Soviets," Nos. 255 [519] and 256 [520] of November 22 and November 23, 1918)

From a fully reliable source we are informed that:

At the end of October there was received fully reliable and exact information about the arrival in Stockholm of the Japanese Extraordinary Representative Oda, with the aim of carrying on secret conversation with the German Ambassador Lutzius concerning the conclusion of a German-Japanese secret treaty. An agreement in principle was reached, after which Oda went to Berlin for the final working out of the treaty itself. The result of the conversa-
APPENDIX

tion was the draft of a treaty, which, together with the explanatory note attached, we here publish. We are reliably informed that of the German Government no other than Scheidemann supported the project in question, which was on the other hand opposed by the deputy of the Centre, Secretary of State Erzberger. The revolution which took place in Germany prevented the carrying out of the plan which was the expression of the idea of the treaty and which consisted in the following, namely: that a restoration be carried out in Russia by the forces of Germany and Japan, and a German, Russian, Japanese Alliance be formed in which Russia should be subordinated to the other two partners in the Alliance. After the revolution this treaty became known in the German press and it was published by the Hamburg 'Red Banner'. This disclosure caused animated discussion and bitter polemic, in connection with which the press close to the German Government tried to refute the very fact of the existence of such a draft. Material at our disposal, however, does not leave the slightest doubt of the authenticity of the documents published by us, all the more that in the composition of the present Japanese Cabinet entered one of the most important Japanese statesmen of German orientation, General Tanaka, Minister of War, whose pronouncement on the seventh of May, 1917, in defence of an alliance with Germany provoked at that time the protest of all the Allies. Furthermore from the documents earlier published by the People's Com-

207
TRUTH ABOUT CHINA AND JAPAN

Missariat of Foreign Affairs it is manifest that efforts towards the conclusion of a separate peace and an alliance between Germany, Russia and Japan were made by the German Government in March, 1916, by the German Ambassador in Stockholm, that same Lutzius, through the Japanese Ambassador Ujida (Uchida).

DRAFT OF THE GERMAN-JAPANESE TREATY

Strictly Confidential.

Paragraph 1. Both High Contracting Parties bind themselves, as soon as the world political situation permits, to help the third party, Russia, to obtain under their direction the settlement of her internal affairs and the position of a world power.

Paragraph 2. One of the High Contracting Parties, Japan, binds herself to allow the other High Contracting Party, Germany, the enjoyment of the prerogatives growing out of her treaties with the third party, Russia, as far as they concern Central Asia and Persia and assist in the conclusion of a most favored nation treaty with mutual (reciprocal) guarantees between this third power and the two contracting powers.

Paragraph 3. One of the High Contracting Parties, Japan, binds herself to allow the other High Contracting Party, Germany, the enjoyment of the rights of most favoured nation given to her by the treaties in Southern China and of certain privileges growing
APPENDIX

out of this treaty as yet to be defined in a special treaty and in this connection both contracting parties bind themselves not to allow the passing of further concessions, in regions yet to be definitely defined, into the hands of foreign Powers America and England.

Paragraph 4. One of the High Contracting Parties, Japan, binds herself indirectly to protect the interests of the other High Contracting Party, Germany, in the coming Peace Conference, in a manner agreeable to that party in order that she might suffer as little as possible from the onerous terms of peace in respect to territorial and financial losses.

Paragraph 5. One of the two High Contracting Parties binds herself on the basis of a treaty to be concluded with the third power after her restoration to secure for the other contracting party, Germany, the conclusion of a treaty of mutual (reciprocal) guarantees military, political and economic and to lend her services to the other party, Germany, in this direction.

Paragraph 6. In return for this the other High Contracting Party, Germany, binds herself to conclude a secret military convention on land and sea with the aim of an alliance of mutual (reciprocal) guarantees and mutual protection against the aggressive intentions of America and England, the details to be worked out immediately after the conclusion of peace by specially empowered delegates of both High Contracting Parties.

209
TRUTH ABOUT CHINA AND JAPAN

Paragraph 7. The secret treaty resulting herefrom will define the basic lines of foreign policy of the three High Contracting Parties and may in its full extent and in all its individual paragraphs be worked out immediately after the re-establishing of the third High Contracting Party, Russia.

Paragraph 8. The present treaty is concluded for a period of five years counting from the moment of the restoration of the third party, with the exception of paragraph four, which goes into effect immediately upon receipt of certificates of ratification. In case none of the High Contracting Parties announces six months before the end of the five-year period the intention of discontinuing the action of the treaty, it automatically remains in force for a further five-year period, until one or another of the Contracting Powers signifies its intention of discontinuing it.

Paragraph 9. The present treaty should be ratified as soon as possible and certificates of ratification should be prepared in duplicate in French and German, the German text being the authentic one for Germany and the French text for Japan.

EXPLANATORY NOTE ATTACHED.

The question whether the Western orientation which German policy followed during the whole course of the war was the right one received such an exhaustive answer from the very course of the war and of events that it is doubtful if a critical
APPENDIX

consideration of it is valuable, the more so that at the present moment it has a merely historical interest and not any real significance. The Western orientation brought with itself also the mistake that they (the Germans) did not wish to conclude peace with Russia because they considered it possible to preserve the continued readiness to carry on the war among the Social Democratic sections of the German people possible only under the motto of the battle against reactionary Czarism.

In direct contrast to this was the policy of Japan, who concluded in the middle of the war an alliance with Russia, the full meaning of which, in view of the disintegration of Russia, lies in the future.

The existence in Germany of the idea that it would be possible to make peace with England at the expense of Russia as circumstances showed was not only unfounded, but entailed serious consequences in internal politics for the German Federation of States and for her Allies.

This was, however, not the only mistake of the political orientation in question. After Germany reached the conclusion that an agreement with England, either directly or through America, was impossible, she let the moment slip by for a timely agreement with Russia, by means of which she could have thrown over the hoped-for bridge to the Near and Far East.

In all probability by means of such an orientation Germany would have prevented the disintegration
of Russia and would have protected and even strengthened her rear in the East in an economic, political, and military sense.

Further, it is unlikely that Bolshevism would have been able to obtain such a clear-cut mastery in Russia as has been seen in the past twelve months. In all probability, in the event of an Eastern orientation on the part of Germany, its progress or mastery would have been only a momentary phenomenon or episode and at all events would not have brought on such heavy internal and external catastrophes for that state.

An Eastern orientation of Germany would place England face to face with the necessity of withdrawing from a purposeless war and becoming peace loving because as a result of constant loss of tonnage her future economic development would be under direct threat and a Russia supported by Germany would be a military and political danger for the Asiatic vital nerve.

But if, supported by Germany, Russia is already a mighty factor, constituting a serious danger for England to exercise the greatest caution in carrying out her policy, so much the stronger would this factor be if Japan, supported on the Continent by Germany and Russia, should join the Alliance. Such an orientation would constitute a very great danger for America and England.

From the foregoing it follows that the centre of gravity of future world politics lies in the re-estab-
lishment of a Russia freed of Bolshevism and supported from outside for a number of years, in which Germany and Japan would be equally interested.

From this Japan would gain the advantage that by virtue of the treaty of mutual support with Germany and Russia she would become a very strong military force with which America would have to reckon, all the more so that the divergence between England and America on the basis of the self-determination of Nations is only a matter of time.

The new political Alliance would mean a double advantage, both a political and an economic one, as she would be economically strengthened by Germany and Japan, and would be politically protected against English and American aggressions while she would again rise to the position of a world power.

For Germany economic advantage would be in the form of considerable concession in Turkestan, thanks to which she could make herself independent of America in cotton and paper. In a political and military sense Germany would receive full cover for her rear on land through Russia and on sea through Japan.

The final end of such an Alliance would be the complete removal of England from Asia, the isolation of England from America, through Canada and India, and the economic expulsion of America from Siberia and England from Russia, on the one hand, and the exploitation of China, Central Asia and Persia on the other, the spheres of influence being
TRUTH ABOUT CHINA AND JAPAN

divided according to the following boundaries: Germany receives freedom of action in South China, Persia and Central Asia, while Japan can declare her pretensions to Northern China, Manchuria, Korea and Eastern Siberia.

(L)

TEXT OF SINO-JAPANESE WIRELESS INSTALLATION AGREEMENT

EXPLANATORY NOTE.—The annexed Wireless Telegraph agreement is important to complete the general survey of the methods which Japan has used and is still using to get control of China.

By virtue of this agreement Japanese agents for a period of thirty years will control the central wireless installation of the capital of China—that is, they can build the station, which is extremely doubtful. In the matter of wireless, as in all scientific work, the Japanese are mere copyists, their wireless work being extremely imperfect.

It should be noted that the British Marconi Company had a preliminary agreement for this installation on a purely commercial basis—but that lack of proper diplomatic support, coupled with Japanese intrigue and money, allowed this Japanese invasion to take place.

It is proposed to erect in China a great Wireless Telegraphic Installation that shall be capable of communicating telegraphically direct with Japanese, European or American great installations. The conditions of agreement are as follows:

1. This Agreement is contracted by the Chinese Ministry of the Navy of the one part (hereinafter called “the Chinese Government”) and by Messrs.
APPENDIX

The Mitsui Co., a Japanese firm, undertaking the contract (hereinafter called "the Contractors") of the other part, and the two contracting parties have mutually agreed upon the conditions of this Agreement.

2. The Chinese Government have consented to allow the Contractors to erect a great wireless installation whose forwarding and receiving apparatus shall be capable of communicating messages with Japan, Europe and America. The site of the installation shall, after being designated by the Chinese Government, be either bought or leased for the purposes of erection.

3. The cost for the lease or purchase of lands, erection of buildings and masts or towers, and the construction, transport and erection of the plant, etc., is estimated to be £536,267 (the estimates are attached hereinafter), a sum which the Contractors shall raise and shall also assume entire responsibility for all matters connected with the construction and equipment.

4. The above mentioned capital sum of £536,267, which is for the purpose of constructing the telegraphic installation, shall be repaid in thirty equal annual instalments, that is to say, the whole of this capital shall be divided into thirty equal parts, of which one part shall be paid each year. The part that remains unpaid shall bear interest at the rate of 8% per annum, to be included in the yearly installment of repayment. The date for each yearly instal-
ment of repayment shall be fixed to be on the 31st of December, solar calendar, to commence from the year that operations begin.

5. The Contractor's security for the above capital and for the annual interest shall be from the remaining balance of the receipts of the telegraphic installation after due deduction of all disbursements that are to be drawn from that source, hence the Contractors have to assume sole responsibility for the repayment of all disbursements; should the receipts be insufficient to meet the disbursements, then for the repayments of capital and interest the Contractors shall also assume responsibility, but the Chinese Government shall confer upon the Contractors full controlling powers within the period of thirty years duration.

6. During the period of sole control of the telegraphic installation by the Contractors, the Chinese Government shall be entitled to a royalty of 10% of the receipts of the workings of the telegraphic installation, which is to be calculated in accordance with the whole year of the solar calendar and shall be payable at the end of each year. Should the receipts earned for the whole year's working of the telegraphic installation be insufficient to cover the payments of disbursements then the Chinese Government shall still be entitled to a ten per centum of the total receipts collected during the whole year.

7. The Chinese Government have power to appoint officers in the installation to oversee and supervise accounts, in order that a proper check may be estab-
APPENDIX

lished over the royalty as set forth in Article 6. Besides the appointment of above-mentioned officials, students may be appointed to practise at the station, but the Chinese Government shall bear the whole of the expenses that these students may cost.

8. Owing to the very great responsibility involved with regard to receipts of the working of the station, the Chinese Government must accord its assent to unrestricted communication with wireless stations in all foreign countries and with seaports and ships, with a view to future development, but in communication with wireless stations in the interior of China, with the exception of military communications which shall obey the orders of military organizations, all other commercial communications in the interior of China shall be uniformly refused acceptance. In the event of the Chinese Government being on a war footing this station shall obey all martial orders laid down in China.

9. At any time within the thirty-year period, the Government may take back for itself the station. At that time all outstanding balance yet unpaid and accrued interest of 8% up to that date shall be wholly liquidated by the Chinese Government; the Contractors shall then at the same time have vitiated all their rights of movements vis-à-vis the station. According to the above-mentioned procedure, the Contractors shall previous to the handing over of the station to the Chinese Government make an inventory in the Chinese and English languages of all articles
and things that compose the station and present the inventory to the Ministry.

**Government Must Recognize Contractor's Proprietary Rights in Case of Failure of Payment**

10. Should the Chinese Government be unable to repay the sums in accordance with what is stipulated in Article 9, then the Government has no power to remove from the Contractors their control of the station. Should the Government act in any manner of such a nature it must recognize the Contractors' possession of proprietary rights over the Telegraphic Station.

11. Since the Contractors have to bear the responsibility of repayment of capital and payment of annual interest during the term of thirty years, therefore the Contractors have the right to transfer the Telegraphic Station to another company, but the consent of the Chinese Government must be obtained otherwise it would not be lawful.

12. At the end of the period of thirty years (should provision of Article 9 have not been acted upon), then, irrespective of the capital having been totally redeemed or otherwise, this Telegraphic Station shall then wholly be handed over to the Chinese Government without price and the Government shall take over the Station, the Contractors making demand for no recompense whatsoever, but the Government shall give six months previous notice, otherwise
APPENDIX

the Contractors shall appropriate a 5% of the annual receipts up to the fifth year as remuneration.

Personnel of Station Must Be Retained after Redemption of Loan

13. After the Chinese Government shall have taken over the Telegraphic Station as a Government property, the service of the personnel of the Station shall be retained by the Government, who shall pay them their cash salaries. Should there be any one unsuitable, that person may be discharged from the service, but during the term of control by the Contractors all members of the staff shall be found by the Contractors, who shall pay them their salaries, such salaries shall be drawn from the receipts of the Station.

14. Should greater power be added or additional plant be purchased during the term of thirty years of control of the Station by the Contractors, the Contractors shall assume responsibility for such augmentations, but the consent of the Chinese Government for such addition of capital outlay must be obtained and the repayment of such additional outlay shall still be within the same period of thirty years as aforesaid—that is, devoted to repayments of capital and payment of interest.

15. The Chinese Government shall issue huchows (exemption certificates) for the Contractors to facilitate the transport of all kinds of machinery, material
TRUTH ABOUT CHINA AND JAPAN

and exempt such from likin and other inland miscellaneous charges, but the Contractors must furnish full lists of all machinery material in order that they may be examined and then huchows be issued for these consignments. As to other matters, the regular ordinary regulations in force in China shall be followed.

16. Should Chinese products of suitable quality and cheaper price be available for use among the material needed for the Telegraphic Station such products shall be given first preference.

17. This Agreement is done in three exemplars, each, in the Chinese and English languages. Should there arise any difference in interpretation of any point, the English version shall be the authoritative text.

(Signed) The Ministry of the Navy of the Republic of China.
The Representative of Messrs. The Mitsui Co.

Done in the
7th Year of the Republic of China,
on the 21st Day of February.

NOTE TO THE MINISTRY OF THE NAVY FROM MR. OMURA, REPRESENTATIVE OF MESSRS. MITSUI & CO.

Gentlemen,

21st February.

With reference to the Supplementary Articles of Agreement, in Article 2 it is stated that while the
APPENDIX

control of the Telegraphic Station is assumed by the Chinese Government all disbursements and the service of the amortization of the capital and interest payments shall be wholly assumed by the Chinese Government, should your Ministry entertain misunderstandings as to this Clause our firm is willing to undertake the control of the Station on behalf of your Government under instructions from your Government, and our firm will also undertake to repay capital and interest and all disbursements shall be paid, and act in accordance with the Articles of conditions as agreed upon in the Proper Agreement. The three clauses set forth below are for the purpose of safeguarding the interests of our firm and are as follows:

1. The Chinese Government must give one year’s previous notice in order that reliable measures as to procedure may be devised.

2. During the period that the Telegraphic Station is under the control of the Chinese Government the interest on the capital and all disbursements shall be borne by the Chinese Government independently in accordance with the stipulations set forth in the present Agreement.

3. During the period that the Telegraphic Station is under the control of our firm, our firm shall be allowed to collect charges for transmission of all official and commercial messages.

With respects, etc.

This note is attached to the end of the Supple-
Supplementary Articles to the Agreement

The Ministry of the Navy (hereinafter called "the Chinese Government") with the Japanese firm, Messrs. Mitsui & Co., the contracting engineers (hereinafter called "the contractors") have mutually come to an agreement upon supplementary articles, in the 7th year on the 21st day of February, for the construction of a wireless telegraph station.

According to the agreement the Chinese Government may at any time repay the outstanding unpaid balance and take over the station as a Government property.

Now it is agreed that the procedure to be adopted after the completion of the erection of the telegraph station, is that the station shall be immediately taken over by the Chinese Government. The expenses necessary for its erection shall be raised by the contractors for the Chinese Government, hence the following supplementary articles have been mutually agreed upon by the Chinese Government and the contractors, and are as follows:

1. The contractors undertake to raise a loan for a total sum of £536,267 for the Chinese Government.

222
APPENDIX

which shall be placed to the credit of the contractors in a Japanese bank for the purpose of constructing a wireless telegraph station.

2. The repayment of the above-mentioned capital sum by the Chinese Government shall be spread over thirty years, that is to say, the total capital shall be divided into thirty equal parts and one part shall be repaid each year, amounting to a sum of £17,875.11.4; the unpaid outstanding balance shall bear interest of eight per cent. per annum, to be payable on the same date as the date of repayment of the annual installment, to which it shall be added.

3. The date of repayment of capital each year shall be fixed to be on December 31 of the Solar Calendar. The first year for commencing the repayment shall be from the tenth year after the year that the station commences to operate after its construction and erection are completed and it can communicate telegraphically with the stations erected in Japan, Europe and America.

4. The rate for the repayment of interest by the Chinese Government shall be according to Article 2 of the Supplementary Agreement, and interest shall commence to be paid on December 31 of the year that the erection of the telegraph station is completed.

5. According to this agreement of supplementary articles, since the control of the telegraphic station and the powers of its commercial management shall be taken over again by the Chinese Government,
therefore, should the telegraphic station receipts from its workings be deficient to meet the payment of disbursements and so forth, the contractors shall not assume any responsibility and Article 5 of the proper agreement shall also be vitiated.

6. After the taking over again of the telegraphic station by the Chinese Government should in the course of its commercial operation there arise any impediment from other overseas cable companies with whom the Chinese Government have already entered into any agreements, then the contractors shall act under the instructions of the Chinese Government, whereby the contractors shall devise means to remove any restrictive conditions by negotiation with those cable companies with the station, and should no satisfactory solution be arrived at then the repayments of the instalments that the Chinese Government ought to repay shall be postponed for the time being until some solution shall have been come to, after which repayments may be resumed.

7. The present supplementary article of agreement shall be an integral part of the proper agreement and shall be identically acted upon in accordance with Article 17 of the proper agreement.

(Ministry of the Navy of the Republic of China) (The Japanese firm, Mitsui & Co.; Representative, Omura). Done in the 7th year of the Republic of China, on the 21st day of February.
APPENDIX

NOTE TO THE MINISTRY OF THE NAVY, FROM

MR. OMURA

Gentlemen,

The agreements entered into between your Government and the Great Northern and Eastern Extension Cable Companies state that prior to the year 1930 no other land telegraph station shall be allowed to communicate telegraphically with Europe and America and so forth, our firm shall duly respect this clause within the year limit prior to the year 1930 as provided for in Article 8 of our Supplementary Articles Agreement. From the year 1931 your Government’s agreement with the Great Northern and Eastern Extension Cable Companies will terminate and lose its virtue, and our firm then shall be able to connect with Europe and America and all the world round by commercial communication without restriction. We, therefore, hereby make this declaration, and respectfully request you to take note. This note is attached to the end of our Supplementary Articles Agreement. As both parties are in mutual agreement, seals are affixed in testimony. (Mitsui & Co.), February 21.

To the Ministry of the Navy, from Mr. Omura.

Gentlemen,

The agreement that our firm has entered into with your Ministry for the construction of a great wireless telegraph station, all the necessary material required is selected from noted factories in Japan and is
TRUTH ABOUT CHINA AND JAPAN

either purchased from Europe or America and is of the best quality and in no case will any inferior material be employed in substitution. We hereby make this declaration and respectfully request you to take note. This note is attached to the Supplementary Articles Agreement, and as both parties are in agreement seals are affixed in testimony (Mitsui & Co.; Representative, Omura), February 21.

DECLARATION

Whereas the Proper and Supplementary Agreements for the construction of a large wireless telegraph station were completed on February 21, 1918, and whereas it is mutually agreed by both parties that during the term of thirty years no other party shall be allowed to erect a similar wireless telegraph station for communicating telegraphically with Japan, Europe and America, neither may the Chinese Government itself erect an installation, and the Cabinet have in meeting passed the application, and whereas the conditions of the agreement have been mutually agreed upon and the agreement has been signed by both the contracting parties at the end of the document, and, furthermore, the statement as set forth in the preceding has been mutually agreed upon by both the contracting parties and that the procedure set forth in Article 17 of the Proper Agreement shall be adopted.

7th year of the Republic of China, March 5. (Mitsui & Co., Omura.)  

226
APPENDIX

(M)

CHINESE GOVERNMENT TABLES AND RETURNS FOR THE YEAR ENDING JUNE 30, 1919

EXPLANATORY NOTE.—The valuable tables and returns annexed hereto are from an official (unpublished) annuaire of the Peking Cabinet. Nothing like them has ever been issued. They include:

(1) A return of the Chinese Debt Service—the most elaborate statement yet published;
(2) The administrative expenses of the Central Government, giving a calendar year's estimate (excluding provincial expenditure);
(3) A complete return of the number of troops under arms in China to-day—total, 1,290,657 men, costing the country $208,971,080 per annum.

The available income of China to-day is about $370,000,000. National Debt Service requires $120,000,000, and Administrative Expenses (central and provincial governments) at least $130,000,000. Thus only $120,000,000 a year can be spared for Army and Navy. But the known army expenditure is upwards of 208 million dollars: when Navy and Extraordinary Field expenses of the army (due to the internal struggle) are added, the annual deficit is about $130,000,000.

This has been the explanation of the borrowings from Japan. If the list of Japanese loans in 1918 is carefully checked it will be found to amount to the deficit in the Chinese Budget.

The main conclusions, however, to be drawn from all these figures and returns are (1) that China can be governed more cheaply than any country in the world, bearing in mind her four million square miles of territory and her population of upwards of four hundred millions; (2) that in spite of the bucket-shop methods of finance encouraged by foreign concessionnaires China, in comparison with Europe, is to-day practically debt-free, her total unproductive debt (less the suspended Boxer indemnities), Internal and External, calling for only $120,000,000 (say £20,000,000) per annum in interest and sinking-fund, and amounting in capital-value to considerably less than one pound sterling per head of population.
TRUTH ABOUT CHINA AND JAPAN

Extract from Government Statement

1. Payment of National Debts.

On account of the payment of the Boxer indemnities being postponed, and the low rate of exchange of gold, the expenditure under this head for 1918 was less than usual, only amounting to $112,750,000. Out of this sum, $68,820,000 were paid for foreign loans and $43,930,000 for domestic loans. Judging from previous records, it is felt that the annual provision for this purpose will have to be increased, as the price of sterling at present is extraordinarily low, and its probable rise must be guarded against. The annual amount that will be required for meeting national indebtedness will therefore have to be increased to $120,000,000. The following tables give the list of domestic and foreign loans, including the payment of principal and interest and also the long-term foreign loans.

2. ADMINISTRATIVE EXPENSES.

The amount expended by the Central Government in 1918 was $79,000,000 and that by the Provinces $68,000,000. The total was $147,000,000. Based on previous records, the annual amount required, roughly, is about $140,000,000. Granting that retrenchment can be made, the minimum amount required cannot be less than $130,000,000. The following table gives the estimated administrative expenses of the Central Government (less the Provinces, which expend $68,000,000):

The Latest Estimate of Administrative Expenses of the Central Government

(From July 1, 1918, to June 30, 1919)

(3) In the preceding paragraphs, it is to be noted that the payment of national debts and administrative expenses annually amounts to some $250,000,000. If this amount is deducted from the annual
TRUTH ABOUT CHINA AND JAPAN

Income of $370,000,000, only a residue of $120,000,000 will be available for the support of the army and the navy. At the present time, not counting the $7,150,000, expended on the navy, the army costs the country the enormous sum of $210,000,000. It must be added that even in this amount, neither the extraordinary and additional expenses required by the army, nor the extraordinary expenditure incurred by the Southwest campaign recently, are included. As it is our object to live within our means, it is essential that we should regulate the expenditure according to the income.

EXPLANATORY NOTE.—The annexed returns of the Chinese Government Railways, giving the complete figures for one calendar year (1917), as well as a comparative statement covering several years, are important as an illustration of the consistent growth of China's earning-power. Although railway communication is still in its infancy, and although the lines included in the returns have a mileage of only 4,000 (including several uncompleted trunk-lines), the revenue in 1918 amounted to more than $75,000,000 Mex.—say £14,000,000 sterling.

On this basis of earning-power, when all trunk lines now planned are built (about 8,000 miles) the gross revenue will be over $225,000,000 Mex. per annum—say £40,000,000 sterling. But with feeder-lines added, and with the Chinese trade expansion which cannot fail to come duly considered, there is little doubt that ten years from now—say in 1929—will have a gross annual earning-power of at least one hundred millions sterling.

This shows clearly the superlative value of China's railways and explains why Japan is making such great efforts to alienate as many lines as possible on China's territory and to prevent a proper unification of those that she cannot touch.

The Ministry of Communications announces that the returns of the Chinese Government Railways applying to the year 1917 have not been completely tabulated. Since the time required for printing and translating will be considerable, a preliminary statement embodying the more essential results is given to the press in advance of the full report. The following table condenses the returns of Revenue, Expense, and Income Debits and Credits into a single statement.

243
TRUTH ABOUT CHINA AND JAPAN

The Canton Samshui line has made no report. In spite of this, revenues show an increase of $1,111,983.45 compared with the year before. This is remarkable in view of the fact that from July 27 to October 39 through trains could not be run on the Peking Hankow line, due to washouts, and that from August 8 to November 26 the north end of the Tientsin Pukow with considerable equipment was cut off similarly. Other lines were also interrupted more or less by floods. And on all the northern lines there was considerable embarrassment to traffic due to military manoeuvres following the attempted Imperial restoration.

These various causes so increased Operating Expenses that as a result, Net Operating Revenues decreased slightly,—only $86,303.13. But Income Debits decreased $663,974.90,—due principally to the favourable rate of exchange for interest payments,—and Income Credits increased $325,768.68, so that the final Surplus for the year is $903,440.45 higher than in 1916.

Income Debits are explained to include Interest, Taxes, discount on depreciated currency, losses by exchange, rents and similar payments, Income Credits conversely are rents, gains from exchange, bank interest and similar accruals.

Three full years are now available for comparison under the Uniform Classification of Accounts. The final surplus for each of these years is as follows:—

244
APPENDIX

Surplus

Increase over 1915

1917 ........ $21,630,195.72 $11,958,661.05
1916 ........ 20,726,755.27 11,055,220.60
1915 ........ 9,671,534.67

The surplus remaining after all charges for the year had been paid in 1915 was equivalent to nine per cent. upon the investment made by the Government in these lines. In 1916 it jumped to over 17.7 per cent., and in 1917 amounted to 18.8 per cent.

If Net Operating Revenue be divided by the Investment Assets, by lines, the return earned upon the investment is as follows:—

Per Cent. Return on Investment

Chinese Govt. Railways... $33,833,139.17 $411,605,772.96 8.2

Operating ratio for the year increased slightly over 1916, but is still only 47 per cent. compared
with 53 in 1915. Compared with foreign countries, this is a very gratifying result, as will be seen from the following comparison:

Bulletin No. 100, Bureau of Railway Economics, Washington, D. C., U. S. A.—Austria 76 per cent., France 63 per cent., Germany 70 per cent., India 52 per cent., Japan 48 per cent. and U. S. A. 69 per cent.

The Operating ratio upon the several Government lines in 1917 was as follows:

In gauging the above results, one reservation must be borne in mind. Upon the Peking Hankow, the Peking Mukden, the Tientsin Pukow and the Peking Suiyuan, revenues contain a considerable quantity
APPENDIX

of Peking notes of the Bank of China and the Bank of Communications. These are included at par value. On the other hand, expenses were paid largely in silver.

Announcement is also made of approximate return of traffic for the period from 1st January to 31st December, 1918:
