

RDA BASIC GUIDELINE FOR COPY CATALOGING

UM Library

Audience: people who copy catalog

Scope: primarily books; though most criteria are applicable to other formats as well

Last updated: 20 Apr 2018

Introduction:

Both AACR2 records and RDA records are acceptable in INNOPAC now. Full-level RDA records are always preferable whenever you do copy cataloging (see table below). Do NOT revise Full-level RDA records to AACR2 ones no matter what kind of languages they are. If no full-level records match, see the standards documents for cataloging AACR2 records (Except the case i.e. “**Manual input for encoding levels that are less than full**”)

AACR2 records	RDA records	Preferable cataloging decision
Full level available	N/A	AACR2 records (Copy cataloging)
N/A	Full level Available	RDA records (Copy cataloging)
Full level Available	Full level Available	RDA records (Copy cataloging)
N/A	N/A	AACR2 records (Original cataloging)

Manual input for encoding levels that are less than full:

If the only information missing from a bibliographic record is the physical description (3XX fields), and you have been trained to make the changes in RDA to both the 040 and 3XX fields (see table below), then do add the physical description to the bib record. Otherwise, route it to a senior librarian.

Distinctive features of RDA:

- Distinctive elements — RDA records contain in the 040 field \$e rda, and the fields 336, 337, and 338
- Capitalization — Information may now be capitalized exactly as it is on the preferred source of information
- Brackets [] — each subfield containing missing information is bracketed individually
- Abbreviations — abbreviations are generally not used in RDA
- Transcribe what you see — transcribe as found on the source, transcription fields mostly include: 245, 250, 264, 490, and 5xx when the information is quoted or transcribed (e.g. 505)

Supplement: Examples of some commonly used RDA :
